Contents

Preface	xi
CHAPTER 1	
What is Financial Modelling?	1
What's the Difference Between a Spreadsheet and a Financial Model?	3
Types and Purposes of Financial Models	5
Tool Selection	6
What Skills Do You Need to Be a Good Financial Modeller?	17
The "Ideal" Financial Modeller	23
Summary	27
CHAPTER 2	
Building a Model	29
Model Design	29
The Golden Rules for Model Design	31
Design Issues	32
The Workbook Anatomy of a Model	33
Project Planning Your Model	36
Model Layout Flowcharting	37
Steps to Building a Model	39
Information Requests	47
Version-Control Documentation	49
Summary	50
CHAPTER 3	
Best-Practice Principles of Modelling	51
Document Your Assumptions	51
Linking, Not Hardcoding	52
Enter Data Only Once	53
Avoid Bad Habits	53
Use Consistent Formulas	53
Format and Label Clearly	54
Methods and Tools of Assumptions Documentation	55
Linked Dynamic Text Assumptions Documentation	62

What Makes a Good Model?	65
Summary	67

CHAPTER 4

Financial Modelling Techniques	68
The Problem with Excel	69
Error Avoidance Strategies	71
How Long Should a Formula Be?	76
Linking to External Files	78
Building Error Checks	81
Circular References	85
Summary	90

CHAPTER 5

Using Excel in Financial Modelling	91
Formulas and Functions in Excel	91
Excel Versions	94
Handy Excel Shortcuts	100
Cell Referencing Best Practices	104
Named Ranges	107
Basic Excel Functions	110
Logical Functions	114
Nesting Logical Functions	117
Summary	125

CHAPTER 6

Functions for Financial Modelling	127
Aggregation Functions	127
LOOKUP Functions	139
Nesting Index and Match	150
OFFSET Function	153
Regression Analysis	158
Choose Function	164
Working with Dates	165
Financial Project Evaluation Functions	171
Loan Calculations	177
Summary	183

CHAPTER 7

Tools for Model Display	185
Basic Formatting	185
Custom Formatting	186
Conditional Formatting	191
Sparklines	195

Bulletproofing Your Model	199
Customising the Display Settings	203
Form Controls	210
Summary	226

CHAPTER 8

Tools for Financial Modelling	227
Hiding Sections of a Model	227
Grouping	233
Array Formulas	234
Goal Seeking	240
Structured Reference Tables	242
PivotTables	245
Macros	254
Summary	263

CHAPTER 9

Common Uses of Tools in Financial Modelling	265
Escalation Methods for Modelling	265
Understanding Nominal and Effective (Real) Rates	270
Calculating a Cumulative Sum (Running Totals)	274
How to Calculate a Payback Period	275
Weighted Average Cost of Capital (WACC)	278
Building a Tiering Table	282
Modelling Depreciation Methods	286
Break-Even Analysis	295
Summary	300

CHAPTER 10

Model Review	301
Rebuilding an Inherited Model	301
Improving Model Performance	312
Auditing a Financial Model	317
Summary	323
Appendix: QA Log	323

CHAPTER 11

Stress Testing, Scenarios, and Sensitivity Analysis in Financial Modelling	325
What are the Differences Between Scenario, Sensitivity, and What-If Analyses?	326
Overview of Scenario Analysis Tools and Methods	328
Advanced Conditional Formatting	337
Comparing Scenario Methods	340

Adding Probability to a Data Table	350
Summary	351
CHAPTER 12	
Presenting Model Output	353
Preparing an Oral Presentation for Model Results	353
Preparing a Graphic or Written Presentation for Model Results	355
Chart Types	358
Working with Charts	367
Handy Charting Hints	374
Dynamic Named Ranges	376
Charting with Two Different Axes and Chart Types	382
Bubble Charts	384
Creating a Dynamic Chart	387
Waterfall Charts	391
Summary	395
About the Author	397
About the Website	399
Index	403
