<i>Preface</i>	<i>page xiii</i>
1 Introduction	1
1.1 High-Energy-Density on Earth	3
1.2 Some Connections to Prior Work	4
1.3 Outline	5
1.4 Notation, Variables, and Units	8
2 Characteristics of High-Energy-Density Matter	9
2.1 Landscape of High-Energy-Density Matter	10
2.2 Compressing Atoms	11
2.3 Electron Degeneracy	14
2.4 Equation of State	16
2.5 Collisionality and Equilibrium	17
2.6 Radiation	20
2.7 Magnetic Fields	21
2.8 Warm Dense Matter	23
2.9 Scaling from Astrophysics to the Terrestrial Laboratory	25
3 Fundamental Microphysics of Ionized Gases	27
3.1 Kinetic Theory	28
3.1.1 The Distribution Function	29
3.1.2 Evaluation of the Collision Term	33
3.1.3 Boltzmann's H-Theorem	34
3.1.4 The Maxwell-Boltzmann Distribution Function	35
3.2 Statistical Mechanics	36
3.2.1 The Distribution Functions	37
3.2.2 The Maxwell-Boltzmann Distribution Function (Again)	43

3.3	Thermodynamics	46
3.3.1	First Law of Thermodynamics	47
3.3.2	Second Law of Thermodynamics	48
3.3.3	Helmholtz Free Energy	49
3.3.4	Maxwell's Relations and Thermodynamic Consistency	50
3.4	The Fermi Gas	51
3.4.1	The Chemical Potential	53
3.4.2	The Grand Canonical Ensemble	56
3.5	Debye Shielding and Quasineutrality	58
3.6	Fluid Conservation Equations	61
3.7	Electron Plasma Frequency and Plasma Waves	65
3.8	Coulomb Collisions	69
3.8.1	The Scattering Angle	70
3.8.2	Scattering Cross Section	74
3.8.3	Energy Loss	75
3.8.4	Coulomb Logarithm	76
3.9	Multiple Coulomb Scattering	78
3.9.1	Velocity Decrements and Diffusion	78
3.9.2	Relaxation Times	87
3.10	Radiation as a Fluid	89
3.10.1	Planck's Law	90
3.10.2	Stefan's Law	93
3.10.3	Thermodynamics of Equilibrium Radiation	95
3.11	One-Electron Atom	96
3.11.1	Bohr's Hypothesis	97
3.11.2	Bohr-Sommerfeld Quantization	102
3.11.3	Quantum Theory of Atomic Structure	105
3.12	Plane Electromagnetic Waves	112
3.12.1	Plane Electromagnetic Waves in a Good Conductor	114
3.12.2	Field Energy in a Dispersive Medium	116
3.13	Permittivity and Electrical Conductivity	118
4	Ionization	122
4.1	Saha	127
4.2	Thomas-Fermi	135
4.3	Pressure Ionization and Continuum Lowering	141
4.3.1	Debye-Hückel	146
4.3.2	Ion-Sphere	147
4.3.3	Stewart-Pyatt	150
4.3.4	Ecker-Kröll	155

4.4	Collisional-Radiative	157
4.5	Screened Hydrogenic Average-Atom	161
4.6	Time-Dependent Non-LTE Average-Atom	169
4.6.1	Population Rate Equations	170
4.6.2	Steady-State Non-LTE	174
4.6.3	Dielectronic Recombination	175
4.6.4	Reconstruction of Ionic States	180
4.7	Other Models	182
5	Entropy and the Equation of State	185
5.1	Two-Temperature Thermodynamics	187
5.2	Perfect Gas	189
5.3	Realistic Gas	191
5.4	Debye-Hückel	192
5.4.1	Thermodynamic Properties	194
5.4.2	Nonequilibrium Debye-Hückel	196
5.4.3	Density Fluctuations	199
5.5	Strongly Coupled Plasma	202
5.5.1	Static Properties	204
5.5.2	Scattering Experiments	207
5.5.3	Dynamic Properties	209
5.5.4	Thermodynamic Properties	212
5.5.5	Ornstein-Zernike	213
5.5.6	Hypernetted-Chain	214
5.5.7	One-Component Plasma (OCP)	216
5.6	Thomas-Fermi	219
5.7	Density Functional Theory	226
5.8	Solids	229
5.8.1	Debye Model	229
5.8.2	Mie-Grüneisen Model	233
5.8.3	Lindemann Melt Law	236
5.9	Quotidian Equation of State (QEOS)	237
5.9.1	Electronic EOS	238
5.9.2	Chemical Bonding Correction	238
5.9.3	Ionic EOS	239
5.10	Screened Hydrogenic Average-Atom	245
5.11	Tabular EOS	248
6	Hydrodynamics	251
6.1	Frames of Reference	252
6.1.1	Eulerian and Lagrangean Derivatives	252
6.1.2	Reynolds Transport Theorem	253

6.2	Conservation Equations for Ideal Fluids	254
6.2.1	The Equation of Continuity	254
6.2.2	The Equation of Momentum	255
6.2.3	The Equations of Energy	256
6.2.4	Bernoulli's Equation	258
6.2.5	Vorticity	259
6.3	Method of Characteristics	260
6.3.1	Isothermal Expansion	262
6.3.2	Adiabatic Expansion	264
6.4	Acoustic Disturbances	266
6.5	Shocks	270
6.5.1	Nonlinear Acoustic Waves	271
6.5.2	Rankine-Hugoniot Equations	275
6.5.3	Jump Relations in a Polytropic Gas	277
6.5.4	The Shock Tube	284
6.5.5	Shock Reflection	287
6.5.6	Multiple Shock Reflections	292
6.5.7	Shocks Moving from Heavy into Light Media	293
6.5.8	Sedov-Taylor Blast Wave	295
6.6	Viscous and Heat Conducting Fluids	300
6.6.1	Damping of an Acoustic Wave	304
6.6.2	Structure of the Shock Front	306
6.6.3	The Relaxation Layer	312
6.7	Elastic-Plastic Behavior of Solids	314
6.7.1	Hooke's Law	317
6.7.2	Homogeneous Deformations	318
6.7.3	Thermal Deformations	319
6.7.4	Elastic Deformations	321
6.7.5	Plastic Flow	323
6.7.6	Yield Strength	324
6.8	Transitioning from Planar to Elliptical Flow	326
6.9	Fluid Instabilities	330
6.9.1	Rayleigh-Taylor	332
6.9.2	Kelvin-Helmholtz	338
6.9.3	Richtmyer-Meshkov	341
7	Thermal Energy Transport	344
7.1	Linear Heat Conduction	346
7.2	Nonlinear Heat Conduction	348
7.3	The Heat Flux	353

7.4	Thermal and Electrical Conductivities	357
7.4.1	Onsager Relations	358
7.4.2	Transport Coefficients	360
7.4.3	Relaxation Times	367
7.4.4	Electron-Ion Coulomb Logarithm	368
7.5	Electron-Ion Energy Exchange	371
7.6	Electron Degeneracy Effects	374
7.7	Inhibited Thermal Transport	379
7.8	Nonlocal Heat Transport	387
8	Radiation and Radiative Transfer	391
8.1	The Radiation Field	392
8.1.1	Specific Intensity	393
8.1.2	Radiation Energy Density and Mean Intensity	395
8.1.3	Radiation Flux and Momentum Density	395
8.1.4	Radiation Pressure Tensor	396
8.2	Interaction of the Radiation Field with Matter	398
8.2.1	Absorption	398
8.2.2	Emission	398
8.2.3	Kirchhoff's Law	399
8.2.4	Scattering	400
8.2.5	Stimulated Emission	401
8.3	The Equation of Transfer	402
8.3.1	Boundary Conditions on the Transfer Equation	405
8.3.2	Equation of Transfer in Various Coordinate Systems	406
8.4	Moments of the Transfer Equation	409
8.5	Optical Depth	412
8.6	Approximate Descriptions of the Radiative Transfer Equation	412
8.6.1	Free-Streaming Approximation	413
8.6.2	Diffusion Approximation	414
8.6.3	Telegrapher's Equation	418
8.6.4	Eddington's Approximation	419
8.6.5	Equilibrium Diffusion	422
8.6.6	Higher-Order Approximations	424
8.6.7	Multigroup Approximation	427
8.7	Opacity Averaging	428
8.8	Steady-State Transfer	430
8.8.1	Formal Solution	431
8.8.2	Slab Geometry	433
8.8.3	Milne's Equation	437

8.8.4	Eddington-Barbier Relation	440
8.9	The Comoving Frame Representation	441
8.9.1	Doppler and Aberration Transformations	442
8.9.2	Transforming the Specific Intensity, Emissivity, and Absorptivity	444
8.9.3	Transforming the Transfer Equation	445
8.9.4	Transforming the Moment Equations	446
8.9.5	Comoving-Frame Transfer Equation	447
8.9.6	Comoving-Frame Moment Equations	449
8.9.7	Transforming the Radiation-Matter Coupling Terms	450
8.9.8	Diffusion in the Comoving Frame	451
8.10	View Factors	456
9	Transition Rates and Optical Coefficients	460
9.1	Radiative Transitions	461
9.1.1	Einstein Relations	463
9.1.2	Bound-Bound Optical Coefficients	466
9.1.3	Quantum Mechanics of Radiative Processes	467
9.1.4	Einstein-Milne Relations	476
9.1.5	Bound-Free Optical Coefficients	478
9.1.6	Free-Free Optical Coefficients	485
9.1.7	Thomson Scattering	490
9.1.8	Maximum Opacity Theorem	494
9.2	Collisional Transitions	497
9.2.1	Excitation and De-excitation	497
9.2.2	Ionization and Three-Body Recombination	500
10	Radiation Hydrodynamics	508
10.1	Incorporating Radiation in Euler's Equations	509
10.1.1	Fixed-Frame Equations	510
10.1.2	Comoving-Frame Equation	513
10.1.3	Consistency of the Equations in Both Coordinate Frames	515
10.1.4	Equilibrium Diffusion	516
10.1.5	Nonequilibrium Diffusion	519
10.1.6	Flux Limiting	522
10.2	Thermodynamic Relations in the Presence of Radiation	523
10.2.1	Equilibrium Radiation and a Perfect Gas	523
10.2.2	Equilibrium Radiation and an Ionizing Gas	526
10.3	Marshak Waves	528

10.4	Radiating Shock Waves	540
10.4.1	Radiative Precursors	542
10.4.2	Rankine-Hugoniot Relations and Jump Conditions	543
10.4.3	Fluid Dynamics of Radiating Shocks	545
10.4.4	Radiative Cooling of a Thin Layer	549
10.4.5	Shocks in Optically Thin Material	552
10.4.6	Optically Thick Shocks in the Flux Regime	553
10.4.7	Shocks in Optically Thin Upstream Material	555
10.4.8	Radiation-Dominated Shock Waves	557
10.5	Shock Structure	560
10.5.1	Subcritical	564
10.5.2	Supercritical	567
10.6	Ionization Fronts	569
11	Magnetohydrodynamics	576
11.1	Plasma Electrodynamics	578
11.2	Equations of Magnetohydrodynamics	580
11.2.1	Momentum Equation	580
11.2.2	Induction Equation	582
11.2.3	Electron Thermal Equation	589
11.2.4	Electron Degeneracy	591
11.2.5	Ion Thermal Equation	593
11.2.6	Bohm Diffusion	594
11.2.7	High-Frequency Plasma Oscillations	595
11.2.8	Magnetic Energy	596
11.2.9	Generalized Ohm's Law	597
11.2.10	Hall Effect	598
11.2.11	One-Dimensional Cylindrically Symmetric Equations	599
11.3	Magnetic Reconnection	600
11.3.1	Biermann Battery	602
11.3.2	Sweet-Parker Reconnection	604
11.3.3	Hall MHD Reconnection	607
11.3.4	Plasmoid Formation	608
11.4	Magnetic Confinement	611
12	Electromagnetic Wave-Material Interactions	625
12.1	Electromagnetic Wave Propagation in Homogeneous Medium	626
12.1.1	Interaction of Free Electrons with an Electromagnetic Wave	628
12.1.2	Longitudinal Waves and Spatial Dispersion	629

12.2	Propagation in Inhomogeneous Isotropic Medium	631
12.2.1	Exact Solution in a Linear Density Gradient	632
12.2.2	Reflectivity and Phase Shift	636
12.2.3	Geometrical Optics Approximation	637
12.2.4	Weak Reflection	640
12.2.5	Oblique Incidence	642
12.2.6	Ponderomotive Force and Momentum Deposition	651
12.2.7	Ray-Trace "Equation of Motion"	658
12.3	Reflection at an Interface	659
12.4	Density Profile Modification	664
12.5	Absorption of Electromagnetic Energy	668
12.5.1	Collisional (Inverse Bremsstrahlung)	673
12.5.2	Nonlinear Inverse Bremsstrahlung	676
12.5.3	Resonance	681
12.6	Dielectric Permittivity (Revisited)	683
12.6.1	Plasma Conductivity	684
12.6.2	Near-Free Electron Metals	687
12.7	Kinetic Instabilities	689
12.7.1	Matching Conditions	691
12.7.2	Damping	694
12.7.3	Instability Threshold	697
12.7.4	Parametric Decay and Two-Stream Instabilities	698
12.7.5	Stimulated Raman Scattering	701
12.7.6	Two-Plasmon Decay	704
12.7.7	Stimulated Brillouin Scattering	705
12.7.8	Nonlinear Aspects	709
12.8	Magnetic Fields	711
12.8.1	Spontaneous Generation of Magnetic Fields	711
12.8.2	Faraday Rotation	714
12.9	Relativistic Considerations	717
12.9.1	Electromagnetic Wave Propagation	718
12.9.2	Interaction with Transparent Matter	722
12.9.3	Nonlinear Dynamics at the Vacuum Boundary	724
