Contents

Preface *xiii*

About the Companion Website *xv*

- 1 Introduction 1**
 - 1.1 What is Turbulent Flow? 1
 - 1.2 Examples of Turbulent Flow 2
 - 1.3 The Goals of a Turbulent Flow Study 7
 - 1.4 Overview of the Methodologies Available to Predict Turbulence 9
 - 1.4.1 Direct Numerical Simulation 9
 - 1.4.2 Experimental Methods 10
 - 1.4.3 Turbulence Modeling 11
 - 1.5 The Plan for this Book 12
 - References 13

- 2 Describing Turbulence 15**
 - 2.1 Navier–Stokes Equation and Reynolds Number 15
 - 2.2 What Needs to be Measured and Computed 16
 - 2.2.1 Averaging 17
 - 2.2.2 One-Point Statistics 19
 - 2.2.3 Two-Point Correlations 21
 - 2.2.4 Spatial Spectra 25
 - 2.2.5 Time Spectra 28
 - Reference 29

- 3 Overview of Turbulent Flow Physics and Equations 31**
 - 3.1 The Reynolds Averaged Navier–Stokes Equation 31
 - 3.2 Turbulent Kinetic Energy Equation 33
 - 3.3 ϵ Equation 37
 - 3.4 Reynolds Stress Equation 39
 - 3.5 Vorticity Equation 40
 - 3.5.1 Vortex Stretching and Reorientation 42
 - 3.6 Enstrophy Equation 43
 - References 44

4	Turbulence at Small Scales	47
4.1	Spectral Representation of ϵ	48
4.2	Consequences of Isotropy	50
4.3	The Smallest Scales	54
4.4	Inertial Subrange	58
4.4.1	Relations Between 1D and 3D Spectra	58
4.4.2	1D Spatial and Time Series Spectra	61
4.5	Structure Functions	65
4.6	Chapter Summary	67
	References	67
5	Energy Decay in Isotropic Turbulence	71
5.1	Energy Decay	71
5.1.1	Turbulent Reynolds Number	75
5.2	Modes of Isotropic Decay	76
5.3	Self-Similarity	77
5.3.1	Fixed Point Analysis	79
5.3.2	Final Period of Isotropic Decay	80
5.3.3	High Reynolds Number Equilibrium	84
5.4	Implications for Turbulence Modeling	87
5.5	Equation for Two-Point Correlations	88
5.6	Self-Preservation and the Kármán–Howarth Equation	92
5.7	Energy Spectrum Equation	94
5.8	Energy Spectrum Equation via Fourier Analysis of the Velocity Field	96
5.8.1	Fourier Analysis on a Cubic Region	97
5.8.2	Limit of Infinite Space	99
5.8.3	Applications to Turbulence Theory	101
5.9	Chapter Summary	102
	References	103
6	Turbulent Transport and its Modeling	107
6.1	Molecular Momentum Transport	107
6.2	Modeling Turbulent Transport by Analogy to Molecular Transport	110
6.3	Lagrangian Analysis of Turbulent Transport	112
6.4	Transport Producing Motions	115
6.5	Gradient Transport	119
6.6	Homogeneous Shear Flow	122
6.7	Vorticity Transport	128
6.7.1	Vorticity Transport in Channel Flow	130
6.8	Chapter Summary	132
	References	133
7	Channel and Pipe Flows	135
7.1	Channel Flow	135
7.1.1	Reynolds Stress and Force Balance	138
7.1.2	Mean Flow Similarity	141
7.1.3	Viscous Sublayer	142

7.1.4	Intermediate Layer	143
7.1.5	Velocity Moments	145
7.1.6	Turbulent Kinetic Energy and Dissipation Rate Budgets	148
7.1.7	Reynolds Stress Budget	150
7.1.8	Enstrophy and its Budget	154
7.2	Pipe Flow	156
7.2.1	Mean Velocity	158
7.2.2	Power Law	160
7.2.3	Streamwise Normal Reynolds Stress	162
	References	163
8	Boundary Layers	167
8.1	General Properties	169
8.2	Boundary Layer Growth	171
8.3	Log-Law Behavior of the Velocity Mean and Variance	174
8.4	Outer Layer	175
8.5	The Structure of Bounded Turbulent Flows	177
8.5.1	Development of Vortical Structure in Transition	177
8.5.2	Structure in Transition and in Turbulence	180
8.5.3	Vortical Structures	181
8.5.4	Origin of Structures	186
8.5.5	Fully Turbulent Region	192
8.6	Near-Wall Pressure Field	197
8.7	Chapter Summary	197
	References	199
9	Turbulence Modeling	203
9.1	Types of RANS Models	204
9.2	Eddy Viscosity Models	207
9.2.1	Mixing Length Theory and its Generalizations	208
9.2.2	$K-\epsilon$ Closure	211
9.2.2.1	K Equation	212
9.2.2.2	The ϵ Equation	212
9.2.2.3	Calibration of the $K-\epsilon$ Closure	214
9.2.2.4	Near-Wall $K-\epsilon$ Models	215
9.2.3	$K-\omega$ Models	218
9.2.4	Menter Shear Stress Transport Closure	219
9.2.5	Spalart-Allmaras Model	221
9.3	Tools for Model Development	222
9.3.1	Invariance Properties of the Reynolds Stress Tensor	222
9.3.2	Realizability	226
9.3.3	Rapid Distortion Theory	226
9.4	Non-Linear Eddy Viscosity Models	227
9.5	Reynolds Stress Equation Models	229
9.5.1	Modeling of the Pressure-Strain Correlation	230
9.5.2	LRR Model	232
9.5.3	SSG Model	234

9.5.4	Transport Correlation	238
9.5.5	Complete Second Moment Closure	239
9.5.6	Near-Wall Reynolds Stress Equation Models	240
9.6	Algebraic Reynolds Stress Models	242
9.7	URANS	243
9.8	Chapter Summary	244
	References	245
10	Large Eddy Simulations	251
10.1	Mathematical Basis of LES	252
10.2	Numerical Considerations	257
10.3	Subgrid-Scale Models	258
10.3.1	Smagorinsky Model	261
10.3.2	WALE Model	263
10.3.3	Alternative Eddy Viscosity Subgrid-Scale Models	265
10.3.4	Dynamic Models	266
10.4	Hybrid LES/RANS Models	270
10.4.1	Detached Eddy Simulation	271
10.4.2	A Hybrid LES/RANS Form of the Menter SST Model	272
10.4.3	Flow Simulation Methodology	273
10.4.4	Example of a Zonal LES/RANS Formulation	274
10.4.5	Partially Averaged Navier–Stokes	276
10.4.6	Scale-Adaptive Simulation	277
10.5	Chapter Summary	278
	References	278
11	Properties of Turbulent Free Shear Flows	283
11.1	Thin Flow Approximation	283
11.2	Turbulent Wake	285
11.2.1	Self-Preserving Far Wake	286
11.2.2	Mean Velocity	290
11.3	Turbulent Jet	292
11.3.1	Self-Preserving Jet	292
11.3.2	Mean Velocity	293
11.3.3	Reynolds Stresses	295
11.4	Turbulent Mixing Layer	298
11.4.1	Structure of Mixing Layers	298
11.4.2	Self-Preserving Mixing Layer	300
11.4.3	Mean Velocity	302
11.4.4	Reynolds Stresses	303
11.5	Chapter Summary	304
	References	306
12	Calculation of Ground Vehicle Flows	309
12.1	Ahmed Body	309
12.2	Realistic Automotive Shapes	317

12.3 Truck Flows 324
12.4 Chapter Summary 326
References 327
