An Overview of the Book xxvii

Author xxxiii

## CHAPTER 1

### Nuclear Power in the World Today 1

- 1.1 Types of Reactors and Their Characteristics 1
- 1.2 Number of Power Reactors around the World 1
- 1.3 Power Reactor Architectures 4
- 1.4 Power Reactors and Their Design Features 6
- 1.5 Schematic of a Nuclear Power Plant 6
- 1.6 Coolants Used in Nuclear Power Plants 8
- 1.7 Types of Nuclear Fuel 10
- 1.8 Properties of Nuclear Fuel 12
- 1.9 Reactor Pressure Vessels and Their Properties 13
- 1.10 Characteristics of Reactor Cores 15
- 1.11 Characteristics of Reactor Fuel Assemblies 15
- 1.12 Other Important Reactor Properties (Power Density and Thermal Efficiency) 17
- 1.13 The Power Density 18
- 1.14 Thermal Efficiency 19
- 1.15 Control Rods and Their Function 21
- 1.16 Comparing PWR Control Rods and BWR Control Rods 22
- 1.17 Use of the Scram Button and the Word SCRAM 24
- 1.18 Maintaining the Criticality of the Core over Time 25
- 1.19 Electrical Generating Systems in a Nuclear Power Plant 25
- 1.20 SGs and Their Uses 25
- 1.21 Steam Turbines 26
- 1.22 SG and Steam Turbine Pairing 26
- 1.23 Electrical Generators in Nuclear Power Plants 27
- 1.24 Common Measurements of Electrical Power Production 29
- 1.25 Nikola Tesla and Thomas Edison and Their Contributions to the Field of Nuclear Power 30
- 1.26 The Relationship between Nikola Tesla and George Westinghouse 32
- 1.27 Reviewing What We Have Just Learned 33
- Bibliography 33
  - Books and Textbooks 33
  - Web References 34
- Questions for the Student 34
- Exercises for the Student 35

## CHAPTER 2

### The Pressurized Water Reactor 37

- 2.1 Pressurized Water Reactors 37
- 2.2 PWR Cores and Pressure Vessels 37
- 2.3 Core Design Parameters 39
- 2.4 Flow Paths through the Pressure Vessel and the Core 39
- 2.5 Steam Generators 40
- 2.6 Steam Generator Characteristics and Their Internal Geometries 42
- 2.7 Reactor Coolant Pumps 43
- 2.8 The Pressurizer 45
- 2.9 Fuel Assemblies for PWRs 47
- 2.10 VVER Reactors and Russian PWRs 49
- 2.11 Canadian Pressurized Heavy Water Reactors (CANDU Reactors) 50
- 2.12 Fuel Assemblies for PHWRs (CANDU Reactors) 52
- 2.13 Coolant Temperature Profiles in Different Reactor Designs 55
- 2.14 Temperature Profiles in a PWR Core 55
- 2.15 Movement to Standard Reactor Designs 56
- 2.16 Advanced Reactor Concepts 57
  - 2.16.1 The Trend toward Passive Safety Systems 57
  - 2.16.2 The Westinghouse AP-1000 58
- 2.17 Characteristics of PWRs 58
- 2.18 Core Characteristics and Design Parameters 59
- 2.19 Understanding How the Passive Cooling System Works in the Westinghouse AP-1000 60
- 2.20 Boric Acid in PWRs 64
- Bibliography 66
  - Books and Textbooks 66
  - Web References 66
- Questions for the Student 66
- Exercises for the Student 67

## CHAPTER 3

### The Boiling Water Reactor 69

- 3.1 Boiling Water Reactors 69
- 3.2 Types of American BWRs 70
- 3.3 Fuel Assemblies for BWRs 72
- 3.4 Power Control in a BWR 74
- 3.5 Russian BWRs (RBMKs) 74
  - 3.5.1 RBMK Design Parameters 74
- 3.6 Temperature Profiles in a Typical BWR Core 76

3.7	The Advanced BWR and the Simplified BWR	78
3.8	The Simplified BWR	79
3.9	Characteristics of BWRs	80
3.10	Core Characteristics and Design Parameters	80
3.11	The Void Fraction and the Quality in a BWR Core	81
3.12	Finding the Density from the Void Fraction	81
3.13	The Relationship between the Void Fraction and the Quality	83
3.14	BWR Flow Regimes	85
3.15	Operating Restrictions for a Typical BWR	88
3.16	BWR Operating Maps	88
3.17	Lessons That Can Be Learned from a Reactor Operating Map	89
	Bibliography	91
	Books and Textbooks	91
	Web References	92
	Questions for the Student	92
	Exercises for the Student	93

## CHAPTER 4

### Fast Reactors, Gas Reactors, and Military Reactors 95

4.1	An Introduction to Other Reactor Types	95
4.2	Advantages of Fast Reactors	95
4.3	Fast Reactor Coolants	95
4.4	Advanced Gas Reactors	96
4.5	Liquid Metal Fast Breeder Reactors	97
4.6	Fuel Assemblies for LMFBRs	99
4.7	Temperature Profiles in an LMFBR Core	102
4.8	Other Reactor Concepts	102
4.9	Military Reactors and the MPR	104
4.10	High-Temperature Gas Reactors	106
4.11	HTGR Fuel	106
4.12	Comparing the Designs of Gas Reactors	107
4.13	Gas Reactor Cores and Design Parameters	110
4.14	LMFBR Thermal Cycle Performance	111
4.15	Characteristics of LMFBR Cores	112
4.16	Comparing the Power Densities in Different Reactor Cores	113
4.17	The NSSS and the Containment Building for Fast Reactors	114
4.18	Theoretical Thermal Efficiencies	115
4.19	Earliest Fast Reactors	116
	Bibliography	117
	Books and Textbooks	117
	Web References	117
	Questions for the Student	117
	Exercises for the Student	119

## CHAPTER 5

### Thermal Energy Production in Nuclear Power Plants 121

5.1	Heat Production in Nuclear Power Plants	121
-----	---	-----

5.2	Measuring Nuclear Energy	121
5.3	Examining the Fission Process	122
5.4	Cross Sections and Reaction Rates	122
5.5	Converting the Kinetic Energy of Nuclear Particles into Thermal Energy	125
5.6	Energy Produced by the Fission Process	126
5.7	Estimating the Total Energy Release	127
5.8	Other Types of Nuclear Particles and Radiation	128
5.9	Gamma Rays and Their Properties	129
5.10	Radioactive Decay Heat	129
5.11	Attenuation Coefficients for Different Types of Nuclear Radiation	130
5.12	Energy of Fission Neutrons	131
5.13	The Maxwell-Boltzmann Probability Distribution	134
5.14	Thermal Energy Produced in Nuclear Fuel Rods	135
5.15	The Fuel Rod Cladding	137
5.16	Nuclear Fuel Assemblies	139
5.17	PWR, BWR, and LMFBR Fuel Assemblies	139
5.18	The Number of Fuel Rods in a Fuel Assembly	141
5.19	Fuel Rods in Square Fuel Assemblies	141
5.20	Fuel Rods in Hexagonal Fuel Assemblies	141
5.21	CANDU Reactor Fuel Assemblies	143
5.22	Where Nuclear Energy Is Produced in the Core	144
5.23	Ways of Measuring the Core Power	145
5.24	Heat Generation in Nuclear Fuel Assemblies	147
5.25	The Volumetric Power Densities for Different Reactor Types	149
5.26	Power Densities in Reactor Fuel Assemblies	150
5.27	Power Profiles in Reactor Fuel Assemblies	150
5.28	Using Burnable Poisons to Flatten the Power and Temperature Profile	152
5.29	Axial Power Shapes and Power Peaks	153
5.30	Using Axial Zoning to Reduce Power Peaks	154
5.31	Finding the Power Profiles in Simple Reactors	155
5.32	Neutron Reflectors	155
5.33	Axial Power Profiles in Uniform, Unreflected Cores	156
5.34	Radial Power Profiles in Uniform, Unreflected Cores	157
5.35	Cylindrical Power Profiles and Bessel Functions	158
5.36	Extrapolated Power Profiles	158
5.37	Global Power Profiles in Different Types of Cores	161
5.38	Core Peak-to-Average Power Ratios for Uniform, Unreflected Cores	162
5.39	Power Profiles for Heterogeneous Cores	162
5.40	Flattening the Power Profile	162
5.41	How Control Rods Affect the Core-Wide Power Profile	163
5.42	Power Fluctuations in Steady-State Cores	165

5.43	Where Thermal Energy Is Deposited in the Core	167
5.44	Sources of Decay Heat	167
5.45	Fission Products and Actinides	167
5.46	Decay Heat from Beta Decay	167
5.47	Cherenkov Radiation	168
5.48	Decay Heat as a Function of Burnup	169
5.49	Removing Decay Heat from the Core	169
5.50	Decay Heat Removal after Shutdown	171
5.51	ANS Standards Governing Decay Heat	173
	Bibliography	174
	Books and Textbooks	174
	Web References	174
	Questions for the Student	175
	Exercises for the Student	177

## CHAPTER 6

### The Laws of Thermodynamics 179

6.1	An Introduction to the Laws of Thermodynamics	179
6.2	The First Law of Thermodynamics	179
6.3	Understanding Energy Transfer in Nuclear Systems	181
6.4	Forms of Nuclear Energy Transfer	182
6.4.1	Heat Energy Leading to Heat Transfer	182
6.4.2	Heat Transfer	182
6.4.3	Mass Transfer	183
6.4.4	Work Transfer	183
6.5	Generalized Energy Transfer	183
6.6	Heat Energy and the First Law of Thermodynamics	184
6.7	Thermal Efficiency and the First Law	185
6.8	The Second Law of Thermodynamics	185
6.9	Alternative Statements of the Second Law	186
6.10	The Clausius Inequality	187
6.11	The Increase in Entropy Principle	188
6.12	The Third Law of Thermodynamics	189
6.13	The Fourth or the Zeroth Law of Thermodynamics	190
6.14	Understanding the Difference between Thermodynamics and Heat Transfer	191
6.15	Other Comparisons between Thermodynamics and Heat Transfer	192
6.16	Thermodynamic Properties, Systems, and States	192
6.17	Defining a Pure Material or Substance	192
6.18	The Thermodynamic State of a Material	193
6.19	The Temperature of a Material	193
6.20	Nuclear Temperature Scales	193
6.21	The Definition of Heat	195
6.22	The Definition of Energy	195
6.23	The Definition of Work	197

6.24	Fluidic Work	198
6.25	The Definition of Power	198
6.26	The Definition of Pressure	199
6.27	The Units of Pressure	199
6.28	Thermodynamic Cycles and Path Functions	201
6.29	Using Thermodynamic State Variables	201
6.30	Understanding the Internal Energy and the Enthalpy	202
6.31	Finding the Enthalpy When a Material Changes Phase	203
6.32	Adding Heat to a Two-Phase Mixture	207
6.33	The Temperature Behavior of Single-Phase Flows and Two-Phase Mixtures	207
6.34	The Saturation Temperature and the Saturation Pressure	209
6.35	The Clausius–Clapeyron Equation	209
6.36	The Relationship between the Pressure and the Boiling Point of Water in Light Water Reactors	210
6.37	Relationships between Common Thermodynamic Variables	211
6.38	Pressure–Temperature Diagrams and Phase Diagrams	211
6.39	Temperature–Volume Diagrams	213
6.40	Pressure–Volume Diagrams	214
6.41	Heat Engines	214
6.42	The Carnot Thermal Cycle	215
6.43	Thermal Efficiencies of Nuclear Power Plants	216
	Bibliography	217
	Books and Textbooks	217
	Questions for the Student	218
	Exercises for the Student	219

## CHAPTER 7

### Thermodynamic Properties and Equations of State 221

7.1	Thermodynamic Properties and Nuclear Power Plants	221
7.2	Comparisons to Coal-Fired Power Plants	222
7.3	Thermodynamic State Variables	222
7.4	Thermodynamic Equations of State	222
7.5	The Equation of State for the Ideal Gas Law	223
7.6	Treating Steam as an Ideal Gas	224
7.7	Measuring the Deviation of Steam from an Ideal Gas	225
7.8	Other Equations of State	225
7.9	Inferring the Behavior of Reactor Coolants from Other State Variables	226
7.10	Defining the Enthalpy and Specific Enthalpy of a Fluid	227
7.11	Finding the Enthalpy of a Two-Phase Mixture	228
7.12	Phase Changes in Reactor Coolants	229
7.13	Property Diagrams	230

7.14	Using Property Diagrams to Describe Phase Changes	230
7.15	Pressure–Temperature Diagrams	232
7.16	Temperature–Volume Diagrams	232
7.17	Pressure–Volume Diagrams	233
7.18	Defining the Saturation Temperature and Pressure	234
7.19	The Clausius–Clapeyron Equation	234
7.20	Determining the Boiling Point from Clausius–Clapeyron Equation	234
7.21	Properties of Liquid–Vapor Mixtures	235
7.22	The Quality of a Two-Phase Mixture	235
7.23	Using the Quality to Define the Properties of a Two-Phase Mixture	236
7.24	Relationships between the Quality and the Void Fraction	237
7.25	Finding the Entropy of a Two-Phase Mixture	239
7.26	The Steam Tables	239
7.27	Thermodynamic Properties of Water and Steam	240
7.28	The Behavior of Air–Water Mixtures	245
7.29	Using the Steam Tables to Determine the Properties of Pressurized Water	247
7.30	Using the Steam Tables to Calculate the Enthalpy	247
7.31	Thermodynamic Cycles and Path Functions	247
7.32	The Relationship between the Path a System Takes, and Its Heat and Work Output	249
7.33	Deriving Work from a State Diagram	250
7.34	Finding the Thermal Efficiency from a T–S Diagram	251
7.35	Defining the Energy Storage Capacity of a Material	254
7.36	Definitions of the Specific Heats	254
7.37	Specific Heat at Constant Volume	255
7.38	Specific Heat at Constant Pressure	255
7.39	The Specific Heat for a Pure Substance	255
7.40	The Specific Heat for an Ideal Gas	257
7.41	Other Ways to Find the Specific Heat	258
7.42	Tabulated Values for the Specific Heat	260
7.43	Applying the Specific Heats to Solids and Incompressible Liquids	260
7.44	Applying Specific Heats to Reactor Coolant Pumps	260
7.45	Calculating the Heat Transfer Rate Using the Specific Heats	261
7.46	Determining the Coolant Temperature Profiles in a PWR	262
7.47	Performing an Energy Balance Using the Enthalpy in a Reactor Heat Exchanger	263
7.48	More Accurate Methods for Finding the Boiling Point of a Reactor Coolant	264
	Bibliography	264

Books and Textbooks	264
Web References	265
Questions for the Student	265
Exercises for the Student	266

## CHAPTER 8

### The Nuclear Steam Supply System and Reactor Heat Exchangers 269

8.1	The Nuclear Steam Supply System	269
8.2	Understanding the NSSS	270
8.3	The Components of the NSSS	272
8.4	Thermal Efficiency Optimization	274
8.5	Reactor Coolant Pumps	275
8.6	Reactor Steam Generators	275
8.7	Types of Reactor SGs	277
8.8	SG Design Parameters	279
8.9	More on Reactor SGs	279
8.10	SGs and Heat Exchangers	281
8.11	Steam Turbines	282
8.12	Multistage Steam Turbines	283
8.13	SG and Steam Turbine Pairings	283
8.14	Electrical Generators	284
8.15	How an Electric Generator Works	284
8.16	Condensers and Other Heat Rejection Devices	287
8.17	The Demineralizer	288
8.18	Feedwater Heaters	289
8.19	Types of Reactor Cooling Towers	289
8.20	Heat Transfer through a Reactor Cooling Tower	291
8.21	Types of Heat Exchangers	293
8.22	Heat Exchanger Design	295
8.23	Finding the Heat Transfer Rate through a Heat Exchanger Tube	297
8.24	Exploring the Log-Mean Temperature Difference	300
8.25	Assumptions Regarding the LMTD	300
8.26	Comparing the Virtues of Parallel-Flow and Counterflow Heat Exchangers	302
8.27	Practical Applications of the LMTD	302
8.28	Heat Flows in Cross-Flow Heat Exchangers	304
8.29	Accounting for Crud Buildup in Heat Exchanger Tubes	304
8.30	Tube Fouling Factors	305
8.31	Tube Vibration in Reactor SGs	307
8.32	Fluid Properties and Their Effect on Thermal Efficiency	307
	Bibliography	309
	Books and Textbooks	309
	Web References	310
	Other Reference	310
	Questions for the Student	310
	Exercises for the Student	311

## CHAPTER 9

## Reactor Thermal Cycles 313

- 9.1 The Purpose of Reactor Thermal Cycles 313
- 9.2 An Introduction to the Rankine Thermal Cycle 314
- 9.3 The Steps in the Rankine Thermal Cycle 315
- 9.4 A Practical Rankine Cycle 318
- 9.5 An Energy Balance through the NSSS 318
  - 9.5.1 An Additional Observation 320
- 9.6 Improving the Performance of an Ideal Rankine Cycle 320
- 9.7 Method 1: Superheating the Steam 321
- 9.8 Other Efficiency Improvements—Reheat and Regeneration 322
- 9.9 Method 2: Reheating the Steam 323
- 9.10 Method 3: Regenerating the Cooling Water 325
- 9.11 Thermodynamic Analysis of Regeneration 326
- 9.12 Using Multiple Feedwater Heaters 330
- 9.13 Some Additional Facts Regarding Regeneration 330
- 9.14 Reducing the Condenser Temperature and Pressure 331
- 9.15 Thermodynamic Efficiency Comparisons 332
- 9.16 Balancing the Energy Flow between the Primary and Secondary Loops in a PWR 332
- 9.17 Estimating the Work a Steam Turbine Performs 334
- 9.18 Using Condensers to Reject Waste Heat 335
- 9.19 Comparing Turbine Work and Pump Work 336
- 9.20 Open-Loop Thermal Cycles 338
- 9.21 Removing the Waste Heat from a Nuclear Power Plant 339
- 9.22 Differences between an Actual Rankine Cycle and an Idealized One 340
- 9.23 An Introduction to the Brayton Thermal Cycle 341
- 9.24 The Four Steps in an Ideal Brayton Cycle 341
- 9.25 Hybrid Thermal Cycles for Gas-Cooled Reactors 344
- 9.26 Fast Reactor Thermal Cycles 345
- 9.27 Moving On 347
- Bibliography 348
  - Books and Textbooks 348
- Questions for the Student 348
- Exercises for the Student 349

## CHAPTER 10

## The Laws of Nuclear Heat Transfer 351

- 10.1 An Introduction to Nuclear Heat Transfer 351
- 10.2 Comparing Conduction, Convection, and Radiation 351
- 10.3 Conductive Heat Transfer and Fourier's Law of Conduction 354

- 10.4 The Assumptions Used in Fourier's Law of Conduction 355
- 10.5 Newton's Law of Cooling 356
- 10.6 The Thermal Conductivity and Wiedemann–Franz Law 357
- 10.7 The Specific Heat and the Heat Capacity 360
- 10.8 Newton's Law of Convection 361
- 10.9 The Nusselt Number for Convective Heat Transfer 362
- 10.10 Radiative Heat Transfer and the Greenhouse Effect 363
- 10.11 The Stefan–Boltzmann Law 365
- 10.12 Energy Deposition due to Radiation in a Reactor Core 367
- 10.13 Heat Deposited by Gamma Rays 369
- 10.14 Recoverable and Unrecoverable Nuclear Energy 370
- 10.15 Cooling Spent Nuclear Fuel 370
- 10.16 Thermal Expansion and Temperature-Induced Stresses in Reactor Components 372
- 10.17 Analogies between Heat Flow and Electric Current Flow 372
- 10.18 The Thermal Resistance 372
- 10.19 The Thermal Resistance and Its Applications 373
- 10.20 The Thermal Resistance of an Object in a Radiation Field 375
- 10.21 Heat Flow through Multilayered Objects 376
- 10.22 Composite Thermal Resistances 377
- 10.23 The Thermal Contact Resistance 378
- 10.24 The Relationship between the Thermal Resistance and the Nuclear Heat Flux 379
- 10.25 Heat Conduction in Cylindrical and Spherical Objects 379
- 10.26 Finding the Thermal Resistance of the Cladding and the Coolant 381
- 10.27 Treating a Nuclear Fuel Rod as a Serial Heat Conduction Problem 382
- 10.28 An Introduction to Parallel Heat Transfer 384
- 10.29 Problems with both Serial and Parallel Heat Transfer 385
- 10.30 Heat Conduction in Nuclear Fuel Rods 386
- 10.31 Heat Conduction in Fuel Rods with a Fuel–Cladding Gap 387
- 10.32 Heat Conduction in Annular Fuel Rods 389
- 10.33 Finding the Heat Transfer Rate When the Thermal Conductivity Is a Function of Temperature 389
- 10.34 Summarizing Our Findings 390
- 10.35 Typical Values of the Nuclear Heat Flux and the Fuel Rod Temperature 392
- 10.36 Relationships between Different Types of Nuclear Heat Transfer 393
- 10.37 Final Comments Regarding What We Have Just Learned 393

10.38	Problems with Conduction, Convection, and Radiative Heat Transfer	393
	Bibliography	395
	Books and Textbooks	395
	Questions for the Student	395
	Exercises for the Student	397

## CHAPTER 11

### Heat Removal from Nuclear Fuel Rods 399

11.1	The Flow of Heat through Nuclear Materials	399
11.2	Fourier's Law and Its Application to Nuclear Systems	399
11.3	The Equations of Heat Conduction for a Nuclear System	401
11.4	Deriving the Heat Conduction Equation	401
11.5	Deriving of the Time-Dependent Heat Conduction Equation	403
11.6	The Steady-State Heat Conduction Equation	405
11.7	The Form of the Heat Conduction Equation in Different Coordinate Systems	405
11.8	Some Interesting Reactor Physics Analogies	407
11.9	Other Ways to Classify the Heat Conduction Equations	407
11.10	A Brief Review of Nuclear Fuel Rods and Their Properties	408
11.11	Fuel Rod Thermal Properties	409
11.12	The Power Output of the Fuel and the Core	411
11.13	Comparing the Temperature Drops in BWR and PWR Fuel Rods	412
11.14	Boundary Conditions Used by the Heat Conduction Equation	413
11.15	Implementing Different Types of Boundary Conditions	413
11.16	Solutions to the Steady-State Heat Conduction Equation for Plate-Type Fuel Rods	415
11.17	The Temperature Profile of a Fuel Pin in a Plate-Type Fuel Rod	416
11.18	The Temperature Profile for the Cladding in a Plate-Type Fuel Rod	417
11.19	The Thermal Resistance of a Plate-Type Fuel Rod	418
11.20	Solutions to the Steady-State Heat Conduction Equation for Cylindrical Fuel Rods	419
11.21	The Temperature Profile of the Fuel in a Cylindrical Fuel Rod	420
11.22	The Temperature Profile of the Cladding in a Cylindrical Fuel Rod	421
11.23	The Thermal Resistance of a Cylindrical Fuel Rod	422
11.24	Comparing the Thermal Resistance Terms in a Plate-Type Fuel Rod and in a Cylindrical Fuel Rod	424

11.25	Understanding the Physical Restructuring of Nuclear Fuel	425
11.26	Solutions to the Steady-State Heat Conduction Equation for a Cylindrical Fuel Rod with a Central Hole or Void	426
11.27	How the Thermal Conductivity of Uranium Dioxide Changes with Temperature and Burnup	428
11.28	The Effects of Operation and Irradiation on a Nuclear Fuel Rod	429
11.29	Fission Gas Release in a Nuclear Fuel Rod	430
11.30	Accounting for Density Changes in the Fuel	431
11.31	Adding a Gap to a Fuel Rod	432
11.32	Finding the Gap Temperature Drop	433
11.33	Finding the Cladding Temperature Drop	435
11.34	Finding the Temperature Drop across a Fresh Fuel Pin	437
11.35	Finding the Temperature Drop across an Irradiated Fuel Pin	437
11.36	Fuel Rod Temperature Limits and Regulatory Requirements	439
11.37	Comparing the Average Fuel Pin Temperatures in Solid and Annular Pins	439
11.38	An Overview of the Temperature Drop across a Nuclear Fuel Rod	441
11.39	Finding the Operating Temperature of a Typical Nuclear Fuel Rod	442
11.40	The Effects of Gap Closure and Parallel Conduction on the Gap Heat Transfer Coefficient	443
11.41	The Advantages of Annular Fuel Rods	448
11.42	Fuel Rods with Axially Dependent Heat Generation Rates	452
11.43	Temperature Profiles in Objects with Exponential Heat Sources	453
11.44	Future Trends in Fuel Rod Design and Conductive Heat Transfer	455
	Bibliography	456
	Books and Textbooks	456
	Web References	457
	Questions for the Student	457
	Exercises for the Student	459

## CHAPTER 12

### Time-Dependent Nuclear Heat Transfer 461

12.1	Time-Dependent Heat Transfer in Nuclear Power Plants	461
12.2	Boundary Conditions and Fourier's Equation	461
12.3	A Lumped Parameter Approach to Nuclear Heat Transfer	462
12.4	Numerical Solutions to the General Heat Conduction Equation	462

12.5	Time-Dependent Heat Transfer in Nuclear Fuel Rods	462
12.6	The Temperature Profile during a Rapid Power Increase	463
12.7	Fuel Pin Power Decreases	464
12.8	Understanding the Time-Dependent Heat Transfer Equation	465
12.9	Fourier's Equation for Conductive Heat Transfer	466
12.10	Solutions to Fourier's Equation for Some Simple Reactor Geometries	467
12.11	The Biot Number and the Fourier Number	469
12.12	The Time Constant for Nuclear Heat Transfer	470
12.13	Higher Order Solutions to Fourier's Equation	471
12.14	Time-Dependent Temperature Profiles in Large Reactor Components	472
12.15	Exact and Approximate Solutions to Fourier's Equation	476
12.16	Finding the Biot Number	476
12.17	Estimating the Centerline Temperatures in Homogeneous Objects	477
12.18	The Physical Significance of the Biot Number	478
12.19	Transient Heat Conduction for Multidimensional Shapes	479
12.20	Numerical Alternatives for Finding the Time-Dependent Temperature Profiles	481

## CHAPTER 13

### Nuclear Reactor Fluid Mechanics 485

13.1	Characterizing Reactor Fluid Flow	485
13.2	Internal Flows with and without Friction	485
13.3	Viscid and Inviscid Flows	488
13.4	Compressible and Incompressible Flows	488
13.5	Definition of the Mach Number	488
13.6	Laminar and Turbulent Flows	488
13.7	Forced and Unforced Flows	489
13.8	Steady and Unsteady Flows	490
13.9	Developed and Undeveloped Flows	492
13.10	The Entry Length for Laminar and Turbulent Flows	493
13.11	Classifying Reactor Coolant Flows	493
13.12	Reducing the Conservatism in Reactor Fluid Mechanics Calculations	494
13.13	Using Control Volumes in Reactor Fluid Mechanics	495
13.14	Using a Lumped Parameter Approach	496
13.15	Intensive and Extensive Properties of a Fluid	497

13.16	The State Postulate	497
13.17	The Relative Density and the Specific Gravity	498
13.18	Definition of the Vapor Pressure	498
13.19	The Ideal Gas Law	499
13.20	Partial Pressures and the Vapor Pressure	499
13.21	Coefficient of Compressibility	501
13.22	Compressibility Factors for Real Gases	503
13.23	Understanding Water Hammers	503
13.24	Volume Changes with Temperature and Pressure	504
13.25	Natural Convection Driven by Temperature and Volume Changes	506
13.26	Viscosities of Common Gases and the Sutherland Correlation	507
13.27	Uses for the Fluidity	508
13.28	Taking Another Look at the Dynamic and Kinematic Viscosities	508
13.29	Surface Tension in Reactor Fuel Assemblies	509
13.30	Surface Wetting	509
13.31	Surface Tension and Bubble Formation	511
Bibliography		511
Books and Textbooks		511
Web References		512
Questions for the Student		512
Exercises for the Student		513

## CHAPTER 14

### Fluid Statics and Fluid Dynamics 515

14.1	Static Behavior of Fluids	515
14.2	Pressure at a Point	516
14.3	Pressure in Horizontal Planes	516
14.4	Pascal's Law of Pressure	518
14.5	Measuring the Pressure Level in a Tank, a Pipe, or a Reactor Pressure Vessel	519
14.6	Understanding Fluid Pressures in Reactor Fuel Assemblies	520
14.7	Pressures for Layered Fluids	521
14.8	Measuring the Pressure Drop in a Horizontal Pipe with a Manometer	522
14.9	Pressure Levels in Reactor Cores	524
14.10	Pressure Equalization between Reactor Fuel Assemblies	524
14.11	Cross-Flow in Rod Bundles	526
14.12	Pressure Drops in Open and Closed Cores	526
14.13	Pressure Behavior in PWRs	526
14.14	Pressure Behavior in BWRs	528
14.15	Typical Pressure Levels in the Nuclear Steam Supply System	528
14.16	Fluid Dynamics—The Behavior of Fluids in Motion	531
14.17	Fluid Kinematics and Fluid Dynamics	531

- 14.18 The Lagrangian and Eulerian Views of Fluid Mechanics 532
- 14.19 Finding the Acceleration of an Eulerian Fluid 533
- 14.20 Understanding the Differences between Advection, Diffusion, and Convection 533
- 14.21 Finding the Acceleration of a Fluid in an Eulerian Reference Frame 534
- 14.22 Finding the Advective Acceleration in an Eulerian Reference Frame 536
- 14.23 Some Observations Regarding the Advective Derivative 536
- 14.24 The Material Derivative in Eulerian Fluid Mechanics 537
- 14.25 Heat and Energy Transfer in Reactor Fuel Assemblies 538
- 14.26 Connecting the Lagrangian and the Eulerian Descriptions of Fluid Mechanics 538
- 14.27 Rotational Flows 539
- 14.28 The Vorticity of a Rotational Flow 542
- 14.29 Fluid Deformation and Volumetric Strain 545
- 14.30 Visualizing the Flow of Fluid through a Reactor Piping System 546
- 14.31 Path Lines and Streamlines 546
- 14.32 Definition of a Path Line 546
- 14.33 Definition of a Streak Line 547
- 14.34 Definition of a Streamline 548
- 14.35 Streamlines and Stream Tubes 550
- 14.36 Methods for Observing Path Lines and Streak Lines 550
- 14.37 Reactor Accidents and Particle Entrainment Theory 551
- Bibliography 551
  - Books and Textbooks 551
- Questions for the Student 552
- Exercises for the Student 553
- 15.11 The Fluid Conservation Equations in Different Coordinate Systems 563
- 15.12 The Conservation Equations for One-Dimensional Flows 564
- 15.13 Thermal-Hydraulic Correlations and Their Uses 566
- 15.14 The Continuity Equation 567
- 15.15 Working with the Continuity Equation 569
- 15.16 The Energy Equation 570
- 15.17 Working with the Fluid Energy Equation 572
- 15.18 The Momentum Equations 573
- 15.19 The Differential Momentum Equations 575
- 15.20 Understanding the Advection of Momentum 577
- 15.21 The Time-Dependent Momentum Equations 578
- 15.22 Finding the Pressure Field from the Velocity Field 580
- 15.23 The Navier–Stokes Equations in Cylindrical Coordinates 581
- 15.24 Comparing the Behavior of Newtonian and Non-Newtonian Fluids 583
- 15.25 Treatment of Fluid Friction in a Compressible Fluid 583
- 15.26 Cauchy's Equations for a Compressible Fluid 584
- 15.27 Simplifying Cauchy's Equations to Handle Incompressible Newtonian Fluids 585
- 15.28 A Practical Approach to Fluid Friction in Nuclear Power Plants 586
- 15.29 Viscous Effects and the No-Slip Boundary Condition 588
- 15.30 Euler's Equation and Its Origins 588
- 15.31 Boundary-Layer Approximations 589
- 15.32 Converting Euler's Equation into Bernoulli's Equation 591
- 15.33 Comparing Various Forms of the Conservation Equations 592
- 15.34 Adding Turbulence to the Momentum Equations 592
- 15.35 Velocity Fluctuations in Turbulent Flows 592
- 15.36 The Reynolds Decomposition 594
- 15.37 Solving the Navier–Stokes Equations for Turbulent Flows 594
- 15.38 Modeling the Effects of Turbulence 595
- 15.39 Approximate Solutions to the Navier–Stokes Equations 595
- 15.40 The Origin of the Navier–Stokes Energy Equation 596
- 15.41 Fluid Boundary Conditions 596
- 15.42 The No-Slip Boundary Condition 597
- 15.43 The Interface Boundary Condition 597
- 15.44 The Free Surface Boundary Condition 598
- 15.45 Other Types of Boundary Conditions 598
- 15.46 Pressure Boundary Conditions 598
- 15.47 Flow Boundary Conditions 599
- 15.48 Boundary-Layer Flow 600
- 15.49 Boundary-Layer Solutions 601

## CHAPTER 15

### The Conservation Equations of Fluid Mechanics 555

- 15.1 The Material Derivative 555
- 15.2 The Number of Conservation Equations for Single-Phase Flow 556
- 15.3 Simplifications to the Fluid Conservation Equations 556
- 15.4 Lateral Flow and Cross-Flow 557
- 15.5 Fluid Mechanical Modeling with a CFD Program 557
- 15.6 Common Simplifications to Computational Fluid Dynamics Models for Nuclear Reactors 557
- 15.7 Types of Fluid Flow 557
- 15.8 Fluid Viscosity and Friction 558
- 15.9 The Navier–Stokes Equations 561
- 15.10 Singular Solutions to the Navier–Stokes Equations 561

15.50	Transition Points in Boundary-Layer Theory	602
15.51	Fluid Mechanical Modeling of a Reactor Core	603
15.52	Reviewing What We Have Just Learned	604
	Bibliography	605
	Books and Textbooks	605
	Web References	605
	Questions for the Student	605
	Exercises for the Student	607

## CHAPTER 16

### Single-Phase Flow in Nuclear Power Plants 609

16.1	Single-Phase Flow	609
16.2	Using Gases as Reactor Coolants	610
16.3	Single-Phase Flow without Friction	611
16.4	Compressible and Incompressible Fluids	611
16.5	The Importance of Fluid Friction	611
16.6	Bernoulli's Principle and Bernoulli's Equation	612
16.7	The Importance of Bernoulli's Equation to Nuclear Science and Engineering	612
16.8	Applications of Bernoulli's Equation to Pipes and Other Simple Structures	613
16.9	Applying Bernoulli's Equation to a Flow Blockage	616
16.10	The Effect of Directional Changes in the Flow Field on the Coolant Pressure	617
16.11	The Effect of Elevation on the Coolant Pressure	620
16.12	The Effects of Wall Friction on the Local Pressure	621
16.13	The Equivalent Hydraulic Diameter and Its Applications	622
16.14	Calculating the Total Pressure Drop in a Coolant Channel	625
16.15	Understanding Flow and Pressure Changes	627
16.16	Finding the Flow Rates and the Pressures in Nozzles and Diffusers	628
16.17	Different Types of Pressures	630
16.17.1	The Static Pressure	630
16.17.2	The Dynamic Pressure	630
16.17.3	The Hydrostatic Pressure	630
16.18	The Time-Dependent Bernoulli Equation	632
16.19	Estimating the Start-Up Time of a Reactor Coolant Pump from Bernoulli's Equation	633
16.20	Solving Bernoulli's Equation with Loss Coefficients and Friction Factors in a Viscous Flow Loop	636
16.21	Some Practical Applications of Bernoulli's Equation	637
16.22	Applying Bernoulli's Equation to Laminar Flows	637
16.22.1	Applying Bernoulli's Equation to Steady-State Flows	637
16.22.2	Incompressible Flows	637

16.22.3	Streamline Flows	637
16.23	Analyzing Flows with Shaft Work	638
16.24	Poiseuille's Equation	638
16.25	Throttling Valves	640
	Bibliography	642
	Books and Textbooks	642
	Web References	642
	Questions for the Student	642
	Exercises for the Student	643

## CHAPTER 17

### Laminar and Turbulent Flows with Friction 647

17.1	Reactor Coolants and Their Viscosities	647
17.2	Viscosity and Fluid Friction	647
17.3	Laminar and Turbulent Flows	649
17.4	Characteristics of Laminar Flows	649
17.5	Characteristics of Turbulent Flows	650
17.6	How Viscosity Affects Turbulence	651
17.7	Fluid Flow in Pipes, Reactor Coolant Channels, and Tubes	651
17.8	An Introduction to the Reynolds Number	652
17.9	The Temperature Dependence of the Reynolds Number	653
17.10	The Reynolds Number for Open Surfaces and Closed Surfaces	653
17.11	The Critical Reynolds Number	654
17.12	Turbulent Flow in Pipes, Reactor Coolant Channels, and Tubes	655
17.13	Reynolds Numbers for Reactor Fuel Assemblies	656
17.14	Boundary Layer Development	657
17.15	The Entrance Length and Entrance Effects	657
17.16	Coolant Velocity Profiles for Laminar and Turbulent Flows	659
17.17	Estimating the Wall Shear Stress	661
17.18	The Darcy Equation for the Frictional Pressure Drop	662
17.19	Deriving the Darcy Equation for Laminar Flow	662
17.20	Deriving the Darcy Equation for Turbulent Flow	665
17.21	Boundary-Layer Thicknesses	666
17.22	Applying What We Have Just Learned to a Reactor Coolant Channel	667
17.23	Applying the Darcy Equation to Coolant Channels with Different Cross-Sectional Areas	667
17.24	Turbulent Friction Factors	669
17.25	The Blasius, McAdams, and Petukhov Correlations for Turbulent Flow	670
17.26	Some Observations about the Moody Charts	671
17.27	The Pressure Drop and the Reynolds Number for Circular Pipes	672

17.28	Correction Factors for Developing Flows	672
17.29	Finding the Hydraulic Diameter of a Reactor Coolant Channel	673
17.30	The Relationship of the Reynolds Number to the Flow Channel Diameter	674
17.31	Finding the Reynolds Number for a PWR Coolant Channel	676
17.32	Finding the Reynolds Number for an LMFBR Coolant Channel	677
17.33	Finding the Reynolds Number for the Pressure Tubes in a PWR Steam Generator	678
17.34	Corrections to the Laminar Friction Factors for a Reactor Fuel Assembly	679
17.35	Friction Factors for a Turbulent Reactor Fuel Assembly	680
17.36	The Rehme Correction for the Turbulent Friction Factor	681
17.37	Friction Factors in Reactor Coolant Channels versus Circular Pipes	682
17.38	Comparing the Friction Factors for a Square Fuel Assembly and a Circular Pipe	682
17.39	Turbulent Pressure Drops along a PWR Fuel Assembly	683
17.40	Finding the Pressure Drop in the Primary Side of a PWR Steam Generator	683
17.41	Bundle-Averaged Friction Factors	684
Bibliography		685
Books and Textbooks		685
Other References		685
Questions for the Student		685
Exercises for the Student		687

## CHAPTER 18

### Core and Fuel Assembly Fluid Flow 689

18.1	Friction Factors for Reactor Coolant Channels with Heat Addition	689
18.2	Correction Factors for Isothermal and Non-Isothermal Flows	689
18.3	The Temperature Dependence of the Friction Factor	690
18.4	Effect of Surface Roughness on the Friction Factor	691
18.5	The Pressure Drop when the Flow Is Both Laminar and Turbulent	694
18.6	The Effect of Extended Surfaces, Ribs, and Vanes on the Friction Factor	695
18.7	Loss Coefficients	697
18.8	Pipes and Plenums	700
18.9	The Effect of Grid Spacers on the Pressure Drop	701
18.10	Grid Spacer Loss Coefficients	702
18.11	Wire-Wrap Spacers	704
18.12	Loss Coefficients and the Reynolds Number	704

18.13	Orifice Plates	706
18.14	Steam Generator Orifice Plates	707
18.15	Changing the Core Flow with an Orifice Plate	707
18.16	Core Flow and Pressure Management	708
18.17	Normal Core Flow Patterns	710
18.18	Three-Dimensional Effects	710
18.19	Cross-Flow and Its Origins	711
18.20	Subchannel Cross-Flow	711
18.21	Intra-Assembly Cross-Flow	712
18.22	Core Flow Patterns	713
18.23	The Effects of a Flow Blockage	716
18.24	Estimating the Total Core Pressure Drop	717
18.25	Comparing the Sizes of the Pressure Drops	718
18.26	Loss Coefficients in the Reactor Piping System	720
18.27	Effect of Surface Roughness on the Drag Coefficient	721
18.28	Frictional Forces on Nuclear Fuel Rods and Other Support Structures	723
18.29	Frictional Drag versus Pressure Drag	726
18.30	The Drag Force on a Nuclear Fuel Rod	727
18.31	The Drag Force on a Plate-Type Fuel Rod	729
18.32	Noise and Vibration	729
Bibliography		730
Books and Textbooks		730
Other References		730
Questions for the Student		730
Exercises for the Student		732

## CHAPTER 19

### Reactor Coolants, Coolant Pumps, and Power Turbines 735

19.1	Reactor Coolants and Their Properties	735
19.2	Heavy Water Production	736
19.3	Light and Heavy Water	736
19.4	Factors in Selecting a Reactor Coolant	736
19.4.1	Economic Factors	737
19.4.2	Physical Factors	737
19.4.3	Nuclear Factors	738
19.5	Reactor Coolants Used in Different Reactor Types	738
19.5.1	Water Reactor Coolants	739
19.5.2	Gas Reactor Coolants	739
19.5.3	Fast Reactor Coolants	739
19.6	Physical Properties of Reactor Coolants	740
19.7	Reactor Coolants and Representative Flow Rates	741
19.8	Work Performed by a RCP (Pump Work)	743
19.9	Flow Work	744
19.10	Equations for the Pumping Power of a Pump	746
19.11	Calculating the Pumping Power for a Complete Loop	746

19.12	Corrections to the Pumping Power for Pump Efficiency	747
19.13	Additional Observations about Pumping Power	748
19.14	Finding the Pumping Power for the Primary Side of a PWR Steam Generator	748
19.15	Types of Reactor Coolant Pumps	750
19.16	Coolant Pump Reliability	750
19.17	Jet Pumps and Their Characteristics	751
19.18	Pump Start-Up Times	751
19.19	Estimating the Start-Up Time for a RCP from Bernoulli's Equation	752
19.20	Solving the Momentum Equations with Loss Coefficients and Friction in a Viscous Coolant Loop	756
19.21	Pump Performance Parameters	757
19.22	Performance Curves for Pumps	758
19.23	Matching the Required Head and the Available Head	759
19.24	Connecting Reactor Coolant Pumps in Parallel	759
19.25	Centrifugal Coolant Pumps	761
19.26	Finding the Torque on the Pump Shaft	764
19.27	Analogies between Turbines, Compressors, and Pumps	764
19.28	Other Types of Power Turbines	765
19.29	Steam Turbines and Their Mechanical Efficiency	767
19.30	Ways to Define Turbine Efficiency	768
19.31	Two-Stage Turbines	768
19.32	Steam Turbine Blade Design	769
19.33	Impulse Blades in HP Turbines	770
19.34	Reaction Blades in LP Turbines	770
19.35	Differences between Impulse Turbines and Reaction Turbines	771
19.36	Preventing Cavitation in Reactor Coolant Pumps	771
	Bibliography	773
	Books and Textbooks	773
	Questions for the Student	773
	Exercises for the Student	774

## CHAPTER 20

### Fundamentals of Single-Phase Heat Transfer in Nuclear Power Plants 777

20.1	An Introduction to Single-Phase Nuclear Heat Transfer	777
20.2	Newton's Law and the Bulk Fluid Temperature	777
20.3	Laminar Heat Transfer	779
20.4	Turbulent Heat Transfer	780
20.5	Conduction and Convection	781

20.6	Forced Convection and Natural Convection	782
20.7	Factors That Affect the Convective Heat Transfer Coefficient	783
20.8	Other Methods to Enhance the Convective Heat Transfer Coefficient	785
20.9	An Introduction to the Prandtl Number	785
20.10	The Kinematic Viscosity and the Thermal Diffusivity	786
20.11	Temperature Dependence of the Prandtl Number	787
20.12	A Physical Interpretation of the Prandtl Number	787
20.13	The Reynolds Analogy between Heat and Momentum Transfer	788
20.14	The Velocity Boundary Layer	789
20.15	The Thermal Boundary Layer	789
20.16	The Nusselt Number	790
20.17	Average Subchannel Nusselt Numbers	792
20.18	The Nusselt Number for Laminar Flows	794
20.19	Finding the Nusselt Number for a Constant Axial Heat Flux	794
20.20	Laminar Nusselt Numbers in Reactor Fuel Assemblies	796
20.21	The Entrance Length for Laminar Flows	797
20.22	Understanding the Nusselt Number and Heat Transfer Coefficient for Turbulent Flows	798
20.23	Parameters That Affect the Turbulent Nusselt Number	799
20.24	The Mass Flow Rate and the Heat Transfer Coefficient	800
20.25	Fine-Tuning the Convective Heat Transfer Coefficient	800
20.26	Boundary Layer Effects	801
20.27	Liquid Metal Behavior	801
20.28	Constants Used in Liquid Metal Heat Transfer Correlations	802
20.29	The Reynolds Analogy for Nuclear Heat Transfer	802
20.30	Frictional Forces on Reactor Fuel Rods	804
20.31	Nusselt Numbers and Heat Transfer Coefficients for PWR Fuel Assemblies	804
20.32	Nusselt Numbers and Heat Transfer Coefficients for LMFBR Fuel Assemblies	805
20.33	Geometric Correction Factors for Reactor Fuel Assemblies	808
20.34	Turbulent Heat Transfer at the Entrance to the Core	810
20.35	Steam Generator Heat Transfer	812
20.36	Typical Steam Generator Heat Transfer Rates	813
	Bibliography	814
	Books and Textbooks	814
	Unit Conversion Factors	815
	Questions for the Student	815
	Exercises for the Student	816

## CHAPTER 21

### Correlations for Single-Phase Nuclear Heat Transfer 819

- 21.1 Correlations for the Convective Heat Transfer Coefficient 819
- 21.2 Values for Nusselt Number and the Convective Heat Transfer Coefficient 819
- 21.3 The Dittus–Boelter Correlation 820
- 21.4 The Seider–Tate Correlation 821
- 21.5 Single-Phase Heat Transfer Correlations for Reactor Fuel Assemblies 821
- 21.6 The Weisman Correlation 822
- 21.7 The Presser Correlation 823
- 21.8 The Markoczy Correlation 823
- 21.9 Comparing the Size of the Geometric Correction Factors 824
- 21.10 Including Entrance Effects in Reactor Heat Transfer Correlations 825
- 21.11 Convective Heat Transfer Coefficients for Liquid Metals 826
- 21.12 Liquid Metal Heat Transfer in Circular Tubes 829
- 21.13 The Lyon–Martinelli Correlation 829
- 21.14 Liquid Metal Behavior in Reactor Coolant Channels 831
- 21.15 Comparing the Heat Transfer Coefficients for Water and Liquid Metals 833
- 21.16 How the Radial and Axial Power Profiles Can Affect the Value of the Heat Transfer Coefficient for Turbulent Flow 834
- 21.17 Some Important Observations about Nuclear Heat Transfer Coefficients 836
- 21.18 Heat Transfer Coefficients for Reactor Heat Exchangers 837
- 21.19 Heat Transfer Correlations for Tube Banks 838
- 21.20 Pressure Drops across Tube Banks 842
- 21.21 Nuclear Heat Transfer with Natural Convection 842
- Bibliography 842
  - Books and Textbooks 842
- Questions for the Student 843
- Exercises for the Student 844

## CHAPTER 22

### Natural Convection in Nuclear Power Plants 847

- 22.1 Natural Convection in a Reactor Core 847
- 22.2 Decay Heat Production 848
- 22.3 The Buildup of Decay Heat over Time 848
- 22.4 Passive Decay Heat Removal 850
- 22.5 The Reynolds Numbers for Natural Circulation 850
- 22.6 An Introduction to the Physics of Natural Convection 851
- 22.7 Natural Convection in a Spent Fuel Pool 851

- 22.8 The Force Balance for Fluid Flowing over a Heated Surface 852
- 22.9 The Role of the Grashof Number and the Rayleigh Number in Natural Convection 854
- 22.10 Rayleigh Numbers for Horizontal Surfaces 857
- 22.11 Natural Convection over a Hot Flat Surface 858
  - 22.11.1 Finding the Heat Transfer Rate from a Hot Vertical Plate 859
  - 22.11.2 Finding the Heat Transfer Rate from a Hot Horizontal Plate with the Hot Side Facing Up 859
  - 22.11.3 Finding the Heat Transfer Rate from a Hot Horizontal Plate with the Hot Side Facing Down 860
  - 22.11.4 Accounting for the Effects of Radiative Heat Transfer during Natural Convection 861
- 22.12 The Equations of Motion for Natural Convection 861
- 22.13 Finding the Convective Heat Transfer Coefficient during Natural Circulation 862
- 22.14 Natural Circulation in Enclosed Spaces 864
- 22.15 Nusselt Numbers and Heat Transfer Coefficients for Natural Circulation 866
- 22.16 Natural Convection in Spent Fuel Pools 866
- 22.17 Experimental Scaling Parameters for Pool Boiling for Reactor Fuel Assemblies 868
- 22.18 Reactor Heat Removal Systems and Their Performance 869
- 22.19 Active and Passive Safety Systems 869
- 22.20 The Passive Safety Systems in the Westinghouse AP-1000 869
- 22.21 Understanding the Passive Cooling System in the Westinghouse AP-1000 871
- 22.22 Events and Timelines Governing Passive Safety System Operation 871
- 22.23 Natural Convection in Steam Generators and PWR Fuel Assemblies 873
- Bibliography 875
  - Books and Textbooks 875

## CHAPTER 23

### Fundamentals of Two-Phase Flow in Nuclear Power Plants 879

- 23.1 Fundamentals of Two-Phase Flow 879
- 23.2 Comparing Evaporation, Boiling, and Condensation 880
  - 23.2.1 Evaporation 881
  - 23.2.2 Condensation 881

24.10.1	The Liquid Convection Region	941
24.10.2	The Nucleate Boiling Region	942
24.10.3	The Critical Heat Flux Region	943
24.10.4	The Transition Boiling Region	944
24.10.5	The Film Boiling Region	944
24.11	Correlations for the Convective Heat Transfer Coefficient during Pool Boiling	944
24.12	Convective Heat Transfer Coefficients Prior to Nucleate Boiling	944
24.13	Convective Heat Transfer Coefficients during Nucleate Boiling	945
24.13.1	The Rohsenow Correlation	945
24.13.2	The Zuber and Cooper Correlations	946
24.14	The Evaporation Rate from a Boiling Film	948
24.15	Convective Heat Transfer Coefficient for Transition Boiling and Film Boiling	949
24.16	Behavior of the Convective Heat Transfer Coefficients along the Pool Boiling Curve	950
24.17	The Leidenfrost Effect	951
24.18	Effects of Surface Roughness on the Heat Transfer Coefficient	952
24.19	Pool Boiling in Spent Fuel Pools	953
24.20	Pool Boiling over Horizontal Tubes and Tube Banks	953
24.21	Dependence of the Heat Transfer Coefficient on the System Pressure in the Nucleate Boiling Regime	955
24.22	Pool Boiling over Heated Tubes in a Reactor Heat Exchanger	955
24.23	Flow Boiling in Nuclear Power Plants	956
24.24	Convective Heat Transfer during Flow Boiling	957
24.25	Flow Boiling on a Heated Surface with a <i>Low Heat Flux-to-Mass Flux Ratio</i> (Scenario 1)	958
24.26	Flow Boiling on a Heated Surface with a <i>High Heat Flux-to-Mass Flux Ratio</i> (Scenario 2)	959
24.27	The Temperature Dependence of the Heat Transfer Coefficients in the Flow Boiling Regime	961
24.28	Rod Dryout for Different Heat Flux-to-Mass Flux Ratios	962
24.29	Behavior of the Enthalpy, the Equilibrium Quality, and the Void Fraction in Boiling Cores	962
24.30	Depicting the Flow Boiling Curve Using the Heat Transfer Coefficient and the Equilibrium Quality	965
24.31	Flow Boiling Correlations and Heat Transfer Coefficients Specific to Nuclear Power Plants	966

## CHAPTER 25

### Heat Transfer Correlations for Advanced Two-Phase Nuclear Heat Transfer 971

25.1	Heat Transfer Mechanisms for Two-Phase Flow	971
25.2	Heat Transfer Correlations for Flow Boiling	972
25.3	Heat Transfer Coefficient Behavior in the Subcooled Boiling Regime	973
25.4	The Bernath Correlation for Subcooled NB (for $-0.25 < x < 0$ )	974
25.5	The Klimenko Correlation for Flow Boiling (for $0 < x < \sim 0.80$ )	975
25.6	The Chen Correlation for Flow Boiling (for $0 < x < \sim 0.80$ )	976
25.7	The Kandlikar Correlation for Flow Boiling (for $0 < x < \sim 0.90$ )	978
25.8	Margins of Error in Common Flow Boiling Correlations	980
25.9	Heat Transfer in the Mist Flow Regime after Film Dryout Occurs (for $\sim 0.90 < x < 1.0$ )	980
25.10	Heat Transfer Coefficients for Saturated and Superheated Vapor (for $x \geq 1.0$ )	984
25.11	Cladding Temperature Changes after the CHF Is Reached	985
25.12	Visualizing How the Heat Transfer Coefficient Behaves during Flow Boiling	986
25.13	Fuel Rod and Coolant Channel Temperature Profiles	986
25.14	Cladding-Coolant Temperature Differences before Nucleate Boiling Begins	987
25.15	Typical Locations for the ONB Point, the Net Vapor Generation Point, and the Bulk Boiling Point	987
25.16	Cladding-Coolant Temperature Differences during Subcooled NB	988
25.17	Finding the ONB Point	989
25.18	Cladding-Coolant Temperature Differences after the NVG Point	990
25.19	Finding the Cladding Temperatures in the NB Regime with the Jens-Lottes Correlation	992
25.20	Dependence of the Equilibrium Quality on the Mass Flux	993
25.21	Estimating the Void Fraction as a Function of Axial Elevation	993
25.22	Closing Comments and Observations	996
Bibliography		996

Web References		996
Other References		996
Questions for the Student		996
Exercises for the Student		999

## CHAPTER 26

## Core Temperature Fields 1001

- 26.1 Thermal Behavior of the Fuel and the Cladding 1001
- 26.2 Mechanistic Thermal Design 1001
- 26.3 A Coolant Energy Balance 1004
- 26.4 Axial Coolant Temperature in the Hottest Coolant Channel 1005
- 26.5 Corrections for Changes in the Radial Power Distribution 1006
- 26.6 Cladding Temperatures for the Hot Channel 1007
- 26.7 Finding the Location of the Maximum Cladding Temperature 1008
- 26.8 The Coolant and Cladding Temperatures when the Axial Heat Flux Is Uniform 1008
- 26.9 Temperature Drop from the Cladding to the Coolant 1009
- 26.10 Finding the Temperature Profiles for the Fuel 1010
  - 26.10.1 Approach #1: Start with the Coolant Temperature to Find the Fuel Temperature 1010
  - 26.10.2 Approach #2: Start with the Cladding Temperature to Find the Fuel Temperature 1014
- 26.11 Finding the Locations of the Maximum Fuel and Cladding Temperatures 1015
- 26.12 Finding the Fuel, the Cladding, and Coolant Temperatures in Real Cores 1016
- 26.13 Coolant Temperatures in a Boiling Core 1017
- 26.14 Fuel and Cladding Temperatures in a Boiling Core 1019
- 26.15 Comparing the Behavior of PWR and BWR Cores 1020
- 26.16 Accounting for Statistical Uncertainties in the Core Temperature Profiles 1021
- 26.17 SPDs and Engineering Uncertainty Factors 1022
- 26.18 Reactor Nodal and Subchannel Analysis 1024
- 26.19 Using Super Cells for Reactor Thermal-Hydraulic Analysis 1025
- 26.20 Conservatism in Subchannel Models 1026
- 26.21 Applying the Homogenous Equilibrium Model Equations to Reactor Subchannel Design 1031
- 26.22 Constructing Three-Dimensional Core Temperature Profiles 1033
- Bibliography 1033
  - Books and Textbooks 1033
  - Web References 1034
  - Additional References 1034
- Questions for the Student 1036
- Exercises for the Student 1037

## CHAPTER 27

## Nuclear Hot Channel Factors, the Critical Heat Flux, and the DNBR 1039

- 27.1 The Boiling Crisis in Water Cooled Reactors 1039
- 27.2 Dryout of the Fuel Rods in PWRs 1039
- 27.3 Dryout of the Fuel Rods in BWRs 1039
- 27.4 Coolant and Cladding Temperatures in Typical PWR Cores 1039
- 27.5 The Critical Heat Flux and the Boiling Crisis 1041
  - 27.5.1 Representative Values for the CHF in Modern PWRs 1042
  - 27.5.2 Dependence of the CHF on the Exit Flow Quality 1043
  - 27.5.3 Dependence of the CHF on the Mass Flow Rate 1043
  - 27.5.4 Dependence of the CHF on Grid Spacers 1043
  - 27.5.5 Dependence of the CHF on the System Pressure 1044
- 27.6 Variation of the CHF and the DNBR with Position 1045
- 27.7 Some Boiling Crisis Terminology 1046
- 27.8 CHF Correlations 1047
- 27.9 The Tong Correlation 1047
- 27.10 The Bernath Correlation 1048
- 27.11 The Groeneveld Correlation 1049
- 27.12 The Bowring Correlation 1050
- 27.13 The Westinghouse W-3 Correlation 1051
- 27.14 The W-3 Shape Correction Factor 1052
- 27.15 Understanding Film Dryout in BWRs 1054
- 27.16 CHF Correlations for BWRs 1055
- 27.17 The Critical Power Ratio and Its Uses 1058
- 27.18 The CISE-4 Correlation for the CFQ 1059
- 27.19 The GEXL Correlation 1059
- 27.20 The Hench-Gillis Correlation 1060
- 27.21 Thermal Design Limits and Regulatory Requirements 1063
- 27.22 PWR DNBR Limits 1064
- 27.23 BWR DNBR Limits 1065
- 27.24 Comparison of Critical Quality and CHF Correlations 1066
- 27.25 Other Thermal Limitations on Core Design 1067
- 27.26 Nuclear Hot Channel Factors 1068
- 27.27 Engineering Uncertainty Factors and Their Effect on the Nuclear Hot Channel Factor 1070
- Bibliography 1071
  - Books and Textbooks 1071
  - Web References 1071
  - Additional References 1071
- Questions for the Student 1071
- Exercises for the Student 1073

## CHAPTER 28

### Particle Transport and Entrainment during Reactor Accidents 1075

- 28.1 Particle Transport during Reactor Accidents 1075
- 28.2 Understanding Advection, Diffusion, and Convection 1075
- 28.3 A Mathematical Description of Advection 1075
- 28.4 A Molecular View of Diffusion 1077
- 28.5 Writing the Particle Transport Equation with Advection and Diffusion 1079
- 28.6 Derivation of the Particle Transport Equation 1079
- 28.7 Simplifications to the Particle Transport Equation 1081
- 28.8 Steady-State Solutions 1083
- 28.9 Analogies to the Navier–Stokes Equations 1083
- 28.10 Particle Transport with Turbulent Mixing 1084
- 28.11 The Particle Transport Equation with Turbulence 1084
- 28.12 Particle Transport with Drag 1087
- 28.13 Stokes Law and Stokes Flow 1087
- 28.14 Particle Motion Induced by Buoyancy Forces and Gravity 1088
- 28.15 Equations of Motion for Particles Suspended in a Viscous Fluid 1089
- 28.16 Aerosol Behavior 1089
- 28.17 Forces on the Particles in an Aerosol 1091
- 28.18 Finding the Terminal Settling Velocity 1092
- 28.19 Particle Dispersion Outside of the Containment Building 1093
- 28.20 Radioactive Plumes and Their Shapes 1094
- 28.21 Modeling the Motion of Plumes Close to the Ground 1095
- 28.22 Time-Dependent Particle Dispersion 1096
- 28.23 The Wedge Model of Atmospheric Dispersion 1096
- 28.24 Release Rates for Various Types of Reactor Accidents 1098
- 28.25 Radiological Doses from Typical LOCAs 1098
- 28.26 Dose Rates for PWR LOCAs 1098
- 28.27 Dose Rates for BWR LOCAs 1100
- 28.28 Reducing Particle Dispersion with the Containment Building Overheat Spray System 1101
- Bibliography 1102
  - Books and Textbooks 1102
- Questions for the Student 1102
- Exercises for the Student 1103

## CHAPTER 29

### Equilibrium and Non-Equilibrium Flows, Compressible Flows, and Choke Flows 1105

- 29.1 Critical Flow and Choke Flow 1105

- 29.2 Orifice Flow 1106
- 29.3 Single-Phase Subsonic Orifice Flow 1108
- 29.4 Two-Phase Subsonic Orifice Flow 1109
- 29.5 The Speed of Sound and the Mach Number 1111
- 29.6 Critical Orifice Flow 1112
- 29.7 Applying the Ideal Gas Law to Orifices 1113
- 29.8 Single-Phase Critical Flow 1114
- 29.9 Effect of the Back Pressure and the Exit Pressure on the Critical Flow Rate 1117
- 29.10 Two-Phase Critical Flow 1117
- 29.11 Two-Phase Critical Flow with Multiple Sound Speeds 1118
- 29.12 Critical Flow Rates for Long and Short Coolant Channels 1120
- 29.13 Effects of Thermal Non-equilibrium on the Critical Flow Rate 1121
- 29.14 Discharge Rates for Equilibrium and Non-equilibrium Flows 1121
- 29.15 Homogeneous Equilibrium Models for Critical Two-Phase Flow 1124
- 29.16 Slip Equilibrium Models for Critical Two-Phase Flow 1125
- 29.17 The Equilibrium Rate Model 1127
- 29.18 Applications of the Stagnation Enthalpy, the Stagnation Temperature, and the Stagnation Pressure 1129
- 29.19 Critical Flow for Gaseous Coolants 1131
- 29.20 Rayleigh Flows for Gaseous Coolants 1133
- 29.21 Critical Flows with Friction 1134
- 29.22 The Sonic Length 1135
- 29.23 Computer Modeling of Critical Flows 1136
- 29.24 Applications of Equilibrium Models 1136
- 29.25 Applications of Non-equilibrium Models 1137
- 29.26 Applications of Four-, Five-, and Six-Equation Models 1137
- 29.27 Practical Advantages to HEMs 1138
- 29.28 Equations Used by Separated Flow Models 1139
- 29.29 Equations Used by Two-Fluid Models 1140
- 29.26 Including Thermal Non-equilibrium Effects in the Two-Fluid Energy Equations 1140
- Bibliography 1141
  - Books and Textbooks 1141
  - Web References 1141
  - Other References 1141
- Questions for the Student 1142
- Exercises for the Student 1143

## CHAPTER 30

### Reactor Accidents, DBAs, and LOCAs 1145

- 30.1 Design Limits for Reactor LOCAs 1145
- 30.2 Thermal Design Limits during Normal Operation 1146
- 30.3 Thermal Design Limits for LOCAs 1146

30.4	Structural Design Limits	1146
30.5	Oxidation Design Limits	1146
30.6	How the NRC Defines a LOCA	1147
30.7	Visualizing a Reactor LOCA	1147
30.8	Characteristics of Reactor LOCAs	1148
30.9	Common Types of LOCAs	1148
30.10	Sizes of Reactor LOCAs	1149
30.11	WASH-1400 Report	1150
30.12	Expected Outcomes of a LOCA	1150
30.13	Primary or LB LOCAs	1151
30.13.1	The Blowdown Stage	1151
30.13.2	Isolation of the Core	1151
30.13.3	The Refill Stage	1151
30.13.4	The Reflood Stage	1151
30.13.5	The Long-Term Cooling Stage	1152
30.13.6	The Timing and Pressure Levels during an LB LOCA	1152
30.14	Secondary or SB LOCAs	1154
30.15	The Role of the ECCS	1154
30.16	Safety Systems for BWR LOCAs	1155
30.17	Fuel Rod Failure Rates during Different Types of LOCAs	1156
30.18	Fuel Rod and Cladding Temperatures during a Typical LOCA	1157
30.19	Percentage of Rod Failures during a LOCA	1158
30.20	Using Probability Maps to Emulate the Consequences of Reactor LOCAs	1160
30.21	Effects of Oxidation on the Fuel Rod Failure Rate	1161
30.21.1	Chemical Reaction #1: Zirconium and Water	1162
30.21.2	Chemical Reaction #2: Zirconium and Steam	1162
30.22	Structural Integrity Limits	1163
30.22.1	The Maximum Allowable Amount of Cladding Oxidation	1163
30.22.2	The Maximum Allowable Amount of Hydrogen Generation	1163
30.23	The Baker–Just Equation for Fuel Rod Failure Analysis	1164
30.24	Temperatures at Which Significant Events Occur during Reactor LOCAs	1164
Bibliography		1165
Books and Textbooks		1165

Questions for the Student		1166
Exercises for the Student		1167

## CHAPTER 31

### Flow Oscillations, Density Waves, and Hydrodynamic Instabilities 1169

31.1	Types of Hydrodynamic Instabilities	1169
------	-------------------------------------	------

31.1.1	Static Instabilities Including Ledinegg Instabilities	1169
31.1.2	Dynamic Instabilities Including Density Wave Oscillations	1169
31.2	Hydrodynamic Instabilities in BWR Cores	1170
31.3	Coupled Power–Flow Oscillations	1170
31.4	Types of BWR Instabilities	1172
31.5	Control System Instabilities	1174
31.6	Types of BWR Controllers	1175
31.7	Thermal-Hydraulic Instabilities	1175
31.8	Coupled Neutronic and Thermal Hydraulic Instabilities	1177
31.9	Density Waves in BWRs and Their Origin	1179
31.10	Stability Maps and Operating Maps	1181
31.11	The Phase Change Number	1183
31.12	The Subcooling Number	1184
31.13	Ishii’s Stability Criterion for Hydrodynamic Instabilities	1185
31.14	Hydrodynamic Instabilities in PWRs	1186
31.14.1	Instabilities in the Primary Loop	1187
31.14.2	Instabilities in the Secondary Loop	1187
31.15	More on Ledinegg Instabilities	1187
31.15.1	Regime I: Single-Phase Liquid Flow	1188
31.15.2	Regime II: Two-Phase Flow	1189
31.15.3	Regime III: Single-Phase Vapor Flow	1189
31.16	Ledinegg Stability Criteria	1189
31.17	Flow Oscillations during Start-up and Shutdown	1191
31.18	Thermal-Hydraulic Instabilities and Coupled Power-Flow Oscillations	1191
31.19	Effects of Temperature on the Reactivity	1192
31.20	Void Formation and the Reactor Power Level	1193
31.21	Regulatory Requirements Governing Hydrodynamic Instabilities	1194
31.22	Void Coefficients for Fast Reactors	1196

## APPENDIX A

Unit Systems and Conversion Factors	1289
-------------------------------------	------

## APPENDIX B

Operating Conditions for Common Reactor Types	1293
---	------

## APPENDIX C

Reactor Coolants and Their Properties	1301
---------------------------------------	------

## APPENDIX D

Dimensionless Numbers Used in Nuclear Heat Transfer and Fluid Flow	1305
--	------

## APPENDIX E

Properties of Nuclear Fuel Assemblies	1307
---------------------------------------	------

## APPENDIX F

Properties of Subcooled Water	1309
-------------------------------	------

## APPENDIX G

Properties of Saturated Water and Steam	1313
---	------

## APPENDIX H

Properties of Superheated Steam	1317
---------------------------------	------

## APPENDIX I

Modern Thermal-Hydraulic Design Correlations	1321
--	------

## APPENDIX J

AP-1000 Design Parameters	1325
---------------------------	------

Index	1329
