THE RISE OF STATISTICAL THINKING

1820-1900

New Edition

With a new preface by the author

Theodore M. Porter

1986

PRINCETON UNIVERSITY PRESS

วันที่ 11/12

CONTENTS

List of Abbreviations	ix
Preface to the New Edition	xi
Preface	xxiii
Introduction	3
PART ONE	
THE SOCIAL CALCULUS	17
<i>Chapter 1.</i> Statistics as Social Science	18
The Politics of Political Arithmetic	18
The Numbers of a Dynamic Society	23
<i>Chapter 2.</i> The Laws That Govern Chaos	40
Quetelet and the Numerical Regularities of Society	41
Liberal Politics and Statistical Laws	55
<i>Chapter 3.</i> From Nature's Urn to the Insurance Office	71
PART TWO	
THE SUPREME LAW OF UNREASON	91
<i>Chapter 4.</i> The Errors of Art and Nature	93
Quetelet: Error and Variation	100
<i>Chapter 5.</i> Social Law and Natural Science	110
Molecules and Social Physics	111
Galton and the Reality of Variation	128
PART THREE	
THE SCIENCE OF UNCERTAINTY	149
<i>Chapter 6.</i> Statistical Law and Human Freedom	151
The Opponents of Statistics	152
Statistics and Free Will	162
The Science of Diversity	171
<i>Statistik:</i> Between Nature and History	177

Contents

<i>Chapter 7. Time's Arrow and Statistical Uncertainty in Physics and Philosophy</i>	193
Buckle's Laws and Maxwell's Demon	194
Boltzmann, Statistics, and Irreversibility	208
Peirce's Rejection of Necessity	219
 PART FOUR	
POLYMATHY AND DISCIPLINE	231
<i>Chapter 8. The Mathematics of Statistics</i>	233
Lexis's Index of Dispersion	240
Edgeworth: Mathematics and Economics	255
<i>Chapter 9. The Roots of Biometrical Statistics</i>	270
Galton's Biometrical Analogies	270
Regression and Correlation	286
Pearson and Mathematical Biometry	296
Conclusion	315
Index	321
