CONTENTS

Detailed contents ix
List of figures xvi
List of tables xvii
About the author xx
Preface xxi
Online resources xxiii

PART I INTRODUCTION **1**

1 Why we use numbers in research 3
2 What is a number? Issues of measurement 9

PART II BASIC ANALYSES **17**

3 Working with one variable 19
4 Working with tables of categorical variables 36
5 Examining differences between real numbers 51
6 Significance tests: How to conduct them and what they do not mean 63
7 Significance tests: Why we should not report them 77

PART III ADVANCED ISSUES FOR ANALYSIS **89**

8 The role of judgement in analysis 91
9 Research designs 105
10 Sampling and populations 114
11 What is randomness? 131
12 Handling missing data: The importance of what we do not know 136
13 Handling missing data: More complex issues 162
14 Errors in measurements 170

PART IV MODELLING WITH DATA **179**

15 Correlating two real numbers 181
16 Predicting measurements using simple linear regression 194
17 Predicting measurements using multiple linear regression 201
18 Assumptions and limitations in regression 219
19 Predicting outcomes using logistic regression 226
20 Data reduction techniques 245

PART V CONCLUSION **255**

21 Presenting data for your audience 257

Glossary 270
References 278
