Organic Solar Cells

Energetic and Nanostructural Design

Contents

1	Basic Principles of Modern Organic Solar Cells	1
	Masahiro Hiramoto	
2	A Path to the Blended Junction	23
	Masahiro Hiramoto	
3	Percolation Toward Lateral Junctions	45
	Masahiro Hiramoto	
4	OPV with a Crystalline Organic Pigment Active Layer Up to 10 μm	75
	Toshihiko Kaji	
5	Polymer Solar Cells: Development of π-Conjugated Polymers with Controlled Energetics and Structural Orders	89
	Itaru Osaka	
6	Charge Carrier Dynamics in Polymer Solar Cells	123
	Hideo Ohkita	
7	First-Principles Investigations of Electronically Excited States in Organic Semiconductors	155
	Takatoshi Fujita	
8	Open-Circuit Voltage in Organic Solar Cells	195
	Seiichiro Izawa	
9	Parts-Per-Million-Level Doping Effects and Organic Solar Cells Having Doping-Based Junctions	217
	Masahiro Hiramoto	
10	Proposal for Future Organic Solar Cells	255
	Masahiro Hiramoto	
	Correction to: Organic Solar Cells	C1
	Masahiro Hiramoto and Seiichiro Izawa
