<i>About the Authors</i>	v
Part I: Overview of Highway Location and Alignment Optimization Problem	1
Chapter 1: Introduction	3
1.1 Background	3
1.2 Highway Alignment Optimization Problems	4
1.3 Organization of the Monograph	8
Chapter 2: Highway Cost and Constraints	11
2.1 Initial Construction Costs	12
2.2 Highway Maintenance Costs	13
2.3 User Costs	13
2.4 Environmental and Socio-economic Impacts	14
2.5 Highway Constraints	15
2.5.1 Geometric Constraints	15
2.5.2 Geographical and Environmental Constraints	16
Chapter 3: Review of Artificial Intelligence-based Models for Optimizing Highway Location and Alignment Design	17
3.1 Genetic Algorithms-based Optimization Models	17
3.1.1 Highway Alignment Optimization (HAO) Models by the UMD Research Team	18

3.1.2	Other Models that Use Genetic Algorithms for Optimizing Highway Alignments	23
3.2	Other Artificial Intelligence-based Optimization Models .	24
3.2.1	Swarm Intelligence-based Models	24
3.2.2	Neighborhood Search Heuristic	26
3.3	Other Methods Tried with AIs for Optimizing Highway Alignments	27
3.3.1	Distance Transform	27
3.3.2	Multi-objective Optimization	28
3.3.3	Multiple Path Optimization	28
3.3.4	Other Objectives Considered	28
3.3.5	Summary	29
 Part II: Highway Alignment Optimization with Genetic Algorithms		31
 Chapter 4: Modeling Highway Alignments with GAs		33
4.1	Representation of Highway Alignments with GAs	33
4.2	Modeling Horizontal Alignments	36
4.2.1	Horizontal Alignment Generation Procedure	39
4.3	Modeling Vertical Alignments	40
4.4	Modeling Highway Endpoints	42
4.4.1	Determination of Highway Endpoints	42
4.4.2	Highway Endpoint Determination Procedure	45
4.4.3	GA Operators for Endpoint Generation	47
4.5	Modeling Highway Structures	49
4.5.1	Small Highway Bridges for Grade Separation	50
4.5.2	Structures for Highway Junction Points with Existing Roads	52
 Chapter 5: Highway Alignment Optimization Formulation		55
5.1	Objective Function	55
5.2	Constraints	57
5.3	Integrating GAs and Geographic Information System	59

5.4	Highway Cost Formulation	62
5.4.1	Highway Agency Cost	62
5.4.2	User Cost	68
5.4.3	Penalty and Environmental Costs	70
5.4.4	Life-cycle Cost	74

Chapter 6: Constraint Handling for Evolutionary Algorithms 75

6.1	Direct Constraint Handling	78
6.1.1	Elimination Method	78
6.1.2	Repairing Method	78
6.1.3	Preserving Method	79
6.1.4	Decoding Method	79
6.1.5	Locating the Boundary of the Feasible Regions	80
6.2	Indirect Constraint Handling (Penalty Approaches)	80
6.2.1	Death Penalty	81
6.2.2	Static Penalty	82
6.2.3	Dynamic Penalty	83
6.2.4	Adaptive Penalty	84
6.3	Handling Infeasible Solutions of GA-based Highway Alignment Optimization	84

Chapter 7: Highway Alignment Optimization Through Feasible Gates 87

7.1	Research Motivation of Feasible Gates	87
7.2	Feasible Gates for Horizontal Alignments	90
7.2.1	User-defined Horizontal Feasible Bounds	90
7.2.2	Representation of Horizontal Feasible Gates	92
7.2.3	Horizontal Feasible Gate Determination Procedure	96
7.2.4	User-defined Constraints for Guiding Feasible Alignments	96
7.3	Feasible Gates for Vertical Alignments	99
7.3.1	Road Elevation Determination Procedure	100
7.4	Example Study	102
7.5	Summary	106

Chapter 8:	Prescreening and Repairing in Highway Alignment Optimization	109
8.1	Research Motivation of Prescreening and Repairing	109
8.2	Prescreening and Repairing for Alignments Violating Design Constraints	112
	8.2.1 P&R Basic Concept	112
	8.2.2 Determination of Design Constraint Violations	113
8.3	Example Study	117
8.4	Summary	121
Part III:	Optimizing Simple Highway Networks: An Extension of Genetic Algorithms-based Highway Alignment Optimization	123
Chapter 9:	Overview of Discrete Network Design Problems	125
9.1	Bi-level Discrete Network Design Problems	125
	9.1.1 Upper-level DNDP	127
	9.1.2 Lower-level DNDP	127
9.2	Comparison of Highway Alignment Optimization and Discrete Network Design Problems	127
Chapter 10:	Bi-level Highway Alignment Optimization within a Small Highway Network	131
10.1	Bi-level HAO Concept	132
10.2	Upper Level of Bi-level HAO	134
	10.2.1 Highway Agency Cost for Bi-level HAO	135
	10.2.2 Highway User Cost for Bi-level HAO	135
	10.2.3 Penalty and Environmental Costs	144
10.3	Lower Level of Bi-level HAO	145
	10.3.1 User and System Optimal Traffic Assignment Problems	145
	10.3.2 Determination of Traffic Reassignment	146
10.4	Bi-level HAO Model Structure	148
10.5	Inputs Required for Lower Level of Bi-level HAO	150
	10.5.1 Highway Network and O/D Trip Matrix	150
	10.5.2 Travel Time Functions	156
10.6	Summary and Future Work	160

Chapter 11: Bi-level HAO Model Application Example	163
11.1 Example Description	163
11.2 Optimized Alternatives	166
11.3 Summary	169
Part IV: Highway Alignment Optimization Model Applications and Extensions	171
Chapter 12: HAO Model Application in Maryland Brookeville Bypass Project	173
12.1 Project Description	173
12.2 Data and Application Procedure	174
12.2.1 Horizontal Map Digitization	174
12.2.2 Vertical Map Digitization	176
12.2.3 Tradeoffs in Map Representation for Environmental Issues	176
12.2.4 Description of Model Inputs and Outputs	178
12.3 Optimization Results	180
12.3.1 Optimized Alignments with Different Numbers of PI's	180
12.3.2 Goodness Test	185
12.4 Sensitivity of Optimized Alignments to Other Major Input Parameters	188
12.4.1 Sensitivity to the Model's Objective Function	188
12.4.2 Sensitivity to Design Speed	191
12.4.3 Sensitivity to Elevation Resolution	192
12.4.4 Sensitivity to Cross-section Spacing	193
Chapter 13: HAO Model Application in US 220 Project in Maryland	195
13.1 Project Description	195
13.2 Projection Preparation	197
13.2.1 Spatial Data	197
13.2.2 Project Segmentation	202
13.2.3 Geometric Design Specification	203
13.3 Optimization Results	205

Chapter 14: HAO Model Application to Maryland ICC Project	211
14.1 Project Description	211
14.1.1 Overview of the ICC Study	211
14.1.2 Description of HAO Model Application to ICC Project	213
14.2 Input Data Preparation	214
14.2.1 Road Network	214
14.2.2 Traffic Information	214
14.2.3 GIS Map Preparation	215
14.2.4 Important Input Parameters	218
14.3 Optimization Results	220
14.3.1 Determination of Traffic Reassignments	220
14.3.2 Optimized Alignments	225
14.3.3 Goodness Test	231
Chapter 15: Related Developments and Extensions	233
15.1 Related Developments	233
15.2 Extensions	235
Appendix A: Notation Used in the Monograph	241
Appendix B: Traffic Inputs to the HAO Model for the ICC Case Study	251
