Introduction	1
1 Background for an energy-efficient and low-carbon built environment	4
1.1 <i>Introduction</i>	4
1.2 <i>Principal threats to the global environment</i>	4
1.3 <i>The greenhouse effect, global warming and climate change</i>	6
1.4 <i>Likely impacts of climate change and the challenge of mitigation</i>	9
1.5 <i>Energy use and carbon emissions from buildings</i>	11
1.6 <i>Energy grids: adequacy of infrastructure and security of supply</i>	15
1.7 <i>Other environmental impacts of the built environment</i>	17
1.8 <i>Materials usage and embodied energy/carbon</i>	18
1.9 <i>The need to plan for adaptation</i>	19
1.10 <i>General concepts for whole-life holistic design</i>	20
1.11 <i>Summary</i>	27
2 Interdisciplinary design collaboration for energy-efficient buildings	29
2.1 <i>Introduction</i>	29
2.2 <i>Design team structures and roles</i>	30
2.3 <i>Design appointments and work stages</i>	38
2.4 <i>Brief development</i>	39
2.5 <i>Design objectives for building services engineers</i>	42
2.6 <i>Provision for testing and commissioning</i>	53
2.7 <i>Legislation, regulations and consents</i>	53
2.8 <i>Quality management for designers</i>	58
2.9 <i>Summary</i>	59
3 Generic design strategies for energy-efficient, low-carbon buildings	60
3.1 <i>Introduction</i>	60
3.2 <i>Developing a focused approach</i>	60

3.3	<i>Energy strategy reports</i>	64
3.4	<i>The building envelope and passive design measures</i>	65
3.5	<i>Active elements: engineering systems</i>	73
3.6	<i>Whole-life operation: management regime</i>	81
3.7	<i>Heat pumps for heating</i>	83
3.8	<i>CHP and the impact of grid decarbonisation on viability</i>	83
3.9	<i>Regulatory context: Building Regulations Approved Document Part L in England and Wales</i>	85
3.10	<i>Summary</i>	89
4	Post occupancy evaluation for optimal energy and environmental performance	90
4.1	<i>Introduction</i>	90
4.2	<i>The European Energy Performance of Buildings Directive</i>	90
4.3	<i>Why do we need POE?</i>	93
4.4	<i>POE methods</i>	96
4.5	<i>A method developed in the UK: the PROBE study</i>	99
4.6	<i>Soft Landings</i>	102
4.7	<i>One example of POE from a European study</i>	103
4.8	<i>Summary</i>	109
5	Health and wellbeing	117
5.1	<i>Introduction</i>	117
5.2	<i>Indoor air quality (IAQ)</i>	117
5.3	<i>Thermal comfort</i>	122
5.4	<i>Visual comfort</i>	124
5.5	<i>Acoustical comfort</i>	128
5.6	<i>Indoor environmental quality assessment methods and tools</i>	129
5.7	<i>Summary</i>	132
6	Energy-efficient ventilation	133
6.1	<i>Introduction</i>	133
6.2	<i>Ventilation requirements</i>	133
6.3	<i>Ventilation strategies</i>	136
6.4	<i>Ventilation efficiency</i>	140
6.5	<i>Calculating ventilation rate due to natural driving forces</i>	143
6.6	<i>Fans</i>	148
6.7	<i>Ventilation for cooling</i>	150
6.8	<i>Summary</i>	157
7	Air conditioning systems	158
7.1	<i>Introduction</i>	158
7.2	<i>Classification of air conditioning systems</i>	158
7.3	<i>Unitary systems</i>	159

- 7.4 Central air conditioning systems 161
- 7.5 All-air central air conditioning systems 162
- 7.6 Air and water central air conditioning systems 167
- 7.7 All-water air conditioning systems 173
- 7.8 Chilled ceilings and beams 175
- 7.9 Air conditioning system selection and evaluation 179
- 7.10 Summary 184

8 Energy-efficient thermal energy generation and distribution in buildings 185

- 8.1 Introduction 185
- 8.2 Refrigeration equipment 185
- 8.3 Heat rejection equipment 193
- 8.4 Heating equipment 199
- 8.5 Air distribution systems 201
- 8.6 Hot and chilled water systems 207
- 8.7 Summary 212

9 Low-energy approaches for the thermal control of buildings 213

- 9.1 Introduction 213
- 9.2 Thermal energy recovery 213
- 9.3 Heat pump systems 217
- 9.4 Solar thermal technologies 218
- 9.5 Evaporative cooling 220
- 9.6 Desiccant cooling 224
- 9.7 Slab cooling 226
- 9.8 Thermal energy storage with phase-change materials 229
- 9.9 Summary 230

10 Energy-efficient electrical systems, controls and metering 231

- 10.1 Introduction 231
- 10.2 Energy-efficient power distribution arrangements 231
- 10.3 Motor power for HVAC equipment 236
- 10.4 Lighting 238
- 10.5 Lifts 251
- 10.6 EC/DC fan coil units 253
- 10.7 Key operational decisions for electricity usage 254
- 10.8 Unregulated loads: small power equipment 254
- 10.9 Process loads supported by UPS systems 255
- 10.10 Enabling energy management through controls, monitoring and data collection 255
- 10.11 Controls and building management systems (BMS) 255
- 10.12 Metering and monitoring 262
- 10.13 Renewable electricity generation: wind power and photovoltaics 266
- 10.14 Summary 279

11 Building thermal load calculations	281
11.1 Introduction	281
11.2 The cyclic dynamic model and the admittance procedure	282
11.3 Building heat gains	284
11.4 Total building heat gain	298
11.5 Building classification and thermal response	298
11.6 Building cooling load calculations using the admittance procedure	301
11.7 Building heating load calculations	305
11.8 Summary	306
12 Building electric power load assessment	307
12.1 Introduction	307
12.2 Basic elements of a power system infrastructure	308
12.3 An introduction to load assessment	310
12.4 Load patterns and profiles	311
12.5 The main methods of load assessment	314
12.6 Diversification and diversity factors	315
12.7 Load assessment by system	317
12.8 Lighting	318
12.9 Small power	319
12.10 Mechanical plant	320
12.11 Data processing loads	324
12.12 Loads supported by UPS systems	325
12.13 Parasitic loads	326
12.14 Lifts and escalators	326
12.15 Chargers for electric cars	327
12.16 Load assessment tabulation method	327
12.17 Brief note on assumptions and simplifications	331
12.18 Brief note on the impact of harmonics	331
12.19 Summary	332
13 Space planning and design integration for services	333
13.1 Introduction	333
13.2 Space planning strategy	334
13.3 Space criteria for mechanical and electrical equipment	343
13.4 Space planning for plant rooms	346
13.5 Space planning for risers	350
13.6 Planning horizontal distribution	355
13.7 Integrated and coordinated solutions	358
13.8 Implications of adaptation to climate change on space planning	359
13.9 Builder's work	359
13.10 Summary	360
References	362
Index	368
