<b>List of Figures</b>	<b>ix</b>
<b>List of Tables</b>	<b>xiii</b>
<b>Preface</b>	<b>xv</b>
<b>I General Principles and Methods</b>	<b>1</b>
<b>1 Principles of Mathematical Modeling</b>	<b>3</b>
1.1 How to develop a mathematical model . . . . .	4
1.1.1 A simple mathematical model . . . . .	4
1.1.2 Use of a computer . . . . .	6
1.1.3 Development of mathematical models . . . . .	12
1.2 Types of models . . . . .	16
1.3 Stability of models . . . . .	21
1.4 Dimension, units, and scaling . . . . .	22
1.4.1 Dimensional analysis . . . . .	22
1.4.2 Scaling . . . . .	24
Exercises . . . . .	25
<b>2 Numerical and symbolic computations</b>	<b>27</b>
2.1 Numerical and symbolic computations of derivatives and integrals . . . . .	27
2.2 Iterative methods . . . . .	29
2.3 Newton's method . . . . .	30
2.4 Method of successive approximations . . . . .	32
2.5 Banach Fixed Point Theorem . . . . .	34
2.6 Why is it difficult to numerically solve some equations? . . . . .	37
Exercises . . . . .	40
<b>II Basic Applications</b>	<b>43</b>

<b>3 Application of calculus to classic mechanics</b>	<b>45</b>
3.1 Mechanical meaning of the derivative . . . . .	45
3.2 Interpolation . . . . .	46
3.3 Integrals . . . . .	52
3.4 Potential energy . . . . .	54
Exercises . . . . .	55
<b>4 Ordinary differential equations and their applications</b>	<b>57</b>
4.1 Principle of transition for ODE . . . . .	58
4.2 Radioactive decay . . . . .	59
4.3 Logistic differential equation and its modifications . . . . .	61
4.3.1 Logistic differential equation . . . . .	61
4.3.2 Modified logistic equation . . . . .	61
4.3.3 Stability analysis . . . . .	64
4.3.4 Bifurcation . . . . .	66
4.4 Time delay . . . . .	68
4.5 Approximate solution to differential equations . . . . .	68
4.5.1 Taylor approximations . . . . .	69
4.5.2 Padé approximations . . . . .	71
4.6 Harmonic oscillation . . . . .	73
4.6.1 Simple harmonic motion . . . . .	73
4.6.2 Harmonic oscillator with friction and exterior forces .	76
4.6.3 Resonance . . . . .	80
4.7 Lotka-Volterra model . . . . .	83
4.8 Linearization . . . . .	86
Exercises . . . . .	88
<b>5 Stochastic models</b>	<b>93</b>
5.1 Method of least squares . . . . .	93
5.2 Fitting . . . . .	97
5.3 Method of Monte Carlo . . . . .	102
5.4 Random walk . . . . .	105
Exercises . . . . .	109
<b>6 One-dimensional stationary problems</b>	<b>113</b>
6.1 1D geometry . . . . .	113
6.2 Second order equations . . . . .	116
6.3 1D Green's function . . . . .	120
6.4 Green's function as a source . . . . .	123
6.5 The $\delta$ -function . . . . .	126
Exercises . . . . .	130

<b>III Advanced Applications</b>	<b>131</b>
<b>7 Vector analysis</b>	<b>133</b>
7.1 Euclidean space $\mathbb{R}^3$ . . . . .	133
7.1.1 Polar coordinates . . . . .	135
7.1.2 Cylindrical coordinates . . . . .	135
7.1.3 Spherical coordinates . . . . .	137
7.2 Scalar, vector and mixed products . . . . .	138
7.3 Rotation of bodies . . . . .	142
7.4 Scalar, vector and mixed product in <i>Mathematica</i> . . . . .	144
7.5 Tensors . . . . .	145
7.6 Scalar and vector fields . . . . .	148
7.6.1 Gradient . . . . .	148
7.6.2 Divergence . . . . .	152
7.6.3 Curl . . . . .	156
7.6.4 Formulae for gradient, divergence and curl . . . . .	156
7.7 Integral theorems . . . . .	159
Exercises . . . . .	161
<b>8 Heat equations</b>	<b>163</b>
8.1 Heat conduction equations . . . . .	163
8.2 Initial and boundary value problems . . . . .	168
8.3 Green's function for the 1D heat equation . . . . .	169
8.4 Fourier series . . . . .	173
8.5 Separation of variables . . . . .	177
8.6 Discrete approximations of PDE . . . . .	180
8.6.1 Finite-difference method . . . . .	180
8.6.2 1D finite element method . . . . .	183
8.6.3 Finite element method in $\mathbb{R}^2$ . . . . .	186
8.7 Universality in Mathematical Modeling. Table . . . . .	189
Exercises . . . . .	189
<b>9 Asymptotic methods in composites</b>	<b>193</b>
9.1 Effective properties of composites . . . . .	194
9.1.1 General introduction . . . . .	194
9.1.2 Strategy of investigations . . . . .	196
9.2 Maxwell's approach . . . . .	199
9.2.1 Single-inclusion problem . . . . .	199
9.2.2 Self consistent approximation . . . . .	201
9.3 Densely packed balls . . . . .	202
9.3.1 Cubic array . . . . .	202
9.3.2 Densely packed balls and Voronoi diagrams . . . . .	204

9.3.3 Optimal random packing . . . . .	208
Exercises . . . . .	213
<b>Bibliography</b>	<b>217</b>
<b>Index</b>	<b>221</b>
