CONTENTS

<i>Preface</i>	<i>xiii</i>
1. Genetic Engineering of Crop Plants for Salinity and Drought Stress Tolerance: Being Closer to the Field	1
<i>Pravin V. Jadhav, Prashant B. Kale, Mangesh P. Moharil, Deepti C. Gawai, Mahendra S. Dudhare, Shyam S. Munje, Ravindra S. Nandanwar, Shyamsundar S. Mane, Philips Varghese, Joy G. Manjaya and Raviprakash G. Dani</i>	
1. Introduction	2
2. How Crop Plants Sense the Stress: Signaling and Pathway	3
2.1. Abiotic Stress and its Recognition by Plant	3
3. Plant Response to Drought and Salinity Stress	5
3.1. Drought Stress and Agriculture	5
3.2. Nature of Drought and Plant Response	5
4. Genetic Basis of Drought Tolerance	7
4.1. Salinity Stress: Complexity and its Impact on Agricultural Production	10
4.1.1. Effect of Salinity Stress on Plant Cell	11
4.1.2. Generic Role of K ⁺	12
4.1.3. Transpirational Flux	12
4.1.4. Role of Ca ²⁺ in Relation to Salt Stress	12
4.2. Water Loss due to Salinity Stress	12
4.3. Mechanisms of Salinity Tolerance	13
4.4. Determinants for Salt Tolerance	15
5. Rational Strategies for Developing Drought and Salt Stress Tolerance in Crop Plants	18

6.	Resource Species Used for the Identification of Abiotic Stress Tolerant Genes	20
6.1.	Saccharomyces cerevisiae	20
6.2.	Halophytes	21
6.3.	Glyphytes	21
7.	Genetic Engineering for Enhancing Drought and Salt Stress Tolerance	22
7.1.	Improving Response to Drought Stress by Manipulating Single Action Genes	22
7.2.	Single Function Genes	22
7.2.1.	Osmoprotectants	22
7.2.2.	Detoxifying Genes	32
7.2.3.	Late Embryogenesis Abundant (LEA) Proteins Coding Genes	33
7.2.4.	Genes for Ionic Balance	35
7.2.5.	Decreasing Root to Shoot Translocation of Na ⁺	36
8.	Targeting Pathways: Manipulating Regulatory Genes	37
8.1.	Role of Transcription Factors in the Activation of Stress Responsive Genes	37
8.2.	Role of Helicases in Imparting Tolerance to Abiotic Stress	56
8.3.	Signal Transduction Genes	57
8.4.	Targeting Pathways: Tandem Expression of Genes	59
8.5.	Modifying Function: Engineering C ₄ Photosynthetic Pathway into C ₃ Crops	59
9.	Epigenetic and Post-Transcriptional Control	60
10.	Choice of Promoters: When and How Much to Express	61
11.	Applications of Chloroplast Engineering for Abiotic Stress Tolerance	67
12.	Means of Stress Impositions, Growth Conditions, and Evaluations	68
13.	Conclusion and Future Perspectives	69
14.	References	70
2.	Biotechnological Approaches for the Development of Heat Stress Tolerance in Crop Plants	85
	<i>Sreshthi Bagati, Gyanendra K. Rai, Diksha Bhadwal and Mukesh Kumar Berwal</i>	
1.	Heat Stress	85

2.	Effects of Heat (HT- induced) Stress on Crop Plants	89
2.1.	Morphological, Anatomical and Phenological Effects	90
2.1.1.	Morphological Effects	90
2.1.2.	Anatomical Effects	91
2.1.3.	Phenological Effects	92
2.2.	Physiological Effects	93
2.2.1.	Water Relations	94
2.2.2.	Photosynthesis	94
2.3.	Yield	95
2.4.	Effects on Reproduction and Development	97
3.	How Plants Respond to the Heat Stress	100
3.1.	Mechanism of Tolerance	100
3.2.	Avoidance Mechanism	102
4.	Heat stress and Biotechnology	103
4.1.	Marker Assisted Selection and QTL Mapping for Heat Stress Tolerance	105
4.2.	Genetic Engineering and Transgenic Approaches for Thermo Tolerance	106
4.3.	“Omics” Approaches	107
5.	Conclusion and Future Perspectives	107
6.	References	110
3.	Heat Shock Proteins: Role and Mechanism of Action	127
	<i>Suneha Goswami, Kavita Dubey, Khushboo Singh, Gyanendra K. Rai and Ranjeet Ranjan Kumar</i>	
1.	Introduction	128
2.	Heat Stress	128
3.	Heat Shock Proteins	129
3.1.	Thermal Stability of HSPs	130
3.2.	Classification of Heat Shock Proteins	130
3.3.	Role of Different HSPs	132
4.	HSPs/Chaperones Network	134
5.	Genetically Modified Plants for Heat Stress Tolerance	137
6.	Conclusion	137
7.	References	138

4. Reactive Oxygen Species Generation, Antioxidants and Regulating Genes in Crops under Abiotic Stress Conditions	143
<i>Gyanendra K. Rai, Sreshti Bagati, Pradeep Kumar Rai, Vibha Raj Shanti, Diksha Bhadwal, R.R. Kumar, Monika Singh and Praveen Singh</i>	
1. Introduction	144
2. Reactive Oxygen Species (ROS)	145
2.1. Reactive Oxygen Species (ROS) Generation Sites in Plant cells	146
3. Antioxidant Defense System in Crop Plants	147
3.1. Non-Enzymatic Antioxidants	147
3.2. Enzymatic Antioxidants	149
4. ROS Regulation and Abiotic Stress Tolerance Genes in crops	150
4.1. Antioxidant Genes	150
4.1.1. Superoxide Dismutase (SOD)	150
4.1.2. Catalase (CAT)	152
4.1.3. Ascorbate Peroxidase (APX)	152
4.1.4. Glutathione Reductase (GR)	153
4.1.5. Abscisic acid (ABA)	154
5. Transcription Factors	155
6. Similar to RCD One (SRO) Proteins	159
7. Calcium-Binding Proteins and Calcium Transporters	159
8. Other Functional Proteins	160
9. Conclusion and Future Perspectives	160
10. References	162
5. Antioxidant Defense System in Plants against Abiotic Stress	175
<i>Mukesh Kumar Berwal, Ramesh Kumar, Krishna Prakash Gyanendra K. Rai and K.B. Hebbar</i>	
1. Introduction	175
2. Antioxidant Defense System in Plants	179
2.1. Avoidance of ROS Production	180
2.2. Non enzymatic ROS Scavengers	181
2.2.1. Ascorbic acid (Vitamin C)	181
2.2.2. Glutathione (GSH)	181

2.2.3.	α -Tocopherols	184
2.2.4.	Proline	185
2.2.5.	Carotenoids	185
2.3.	Enzymatic ROS Scavengers	186
2.3.1.	Superoxide Dismutase (SOD)	186
2.3.2.	Catalase	188
2.3.3.	Ascorbate Peroxidase (APX)	189
2.3.4.	Glutathione reductase	190
3.	Conclusion and Future Perspectives	192
4.	References	192
6.	Heat Stress and its Effects on Plant Growth and Metabolism	203
	<i>Ashutosh Rai, Gyanendra K. Rai, and R.S. Dubey</i>	203
1.	Heat Stress	203
2.	Responses of Plants to Heat Stress	204
2.1.	Morpho-phenological Responses to Heat Stress	206
2.2.	Physiological Responses of Heat Stress	206
2.2.1.	Canopy Temperature	206
2.2.2.	Stomatal Conductance	206
2.2.3.	Relative Water Content	207
2.2.4.	Photosynthesis	208
2.2.5.	Transpiration	209
2.2.6.	Membrane Thermostability	209
2.2.7.	Compatible Osmolytes and Hormones	209
2.2.7.1.	Proline	209
2.2.7.2.	Glycine Betaine	211
2.2.7.3.	Gibberellic Acid	211
2.2.7.4.	Salicylic Acid	211
2.2.8.	Secondary Metabolites	212
2.2.8.1.	Polyamines, Polyamine Oxidases and Flavonoids	212
3.	Heat, Oxidative Stress and Antioxidants	212
3.1.	Sites of Production of Reactive Oxygen Species	213
3.2.	Damage Caused Due to ROS	214

3.3. Antioxidative Defense System in Plants	215
3.3.1. Non-Enzymatic Antioxidants	216
3.3.2. Enzymatic Antioxidants	217
3.3.2.1 Superoxide Dismutase	217
3.3.2.2. Peroxidase	218
3.3.2.3. Catalase	218
3.3.2.4. Ascorbate Peroxidase	219
3.3.2.5. Glutathione Reductase	220
4. Heat Stress Specific Proteins	220
4.1. Heat Shock Proteins (HSPs) and Chaperons	220
4.2. Heat Sensing and Signaling Molecules	222
5. Conventional Breeding Approach for Heat Tolerance	223
6. Expressed Sequence Tags: A Molecular Approach to Study Growth Processes and Stress Mechanisms	224
7. Transcriptome Studies in Plants at Various Developmental Stages	226
7.1. Transcriptome Studies under Abiotic Stresses	227
7.2. Expression Profiling Studies Based on Microarray Experiments	230
7.3. Use of cDNA Microarray	231
7.4. Limitations in the Use of Microarrays	233
8. Conclusion and Future Perspectives	233
9. References	235
7. Defense Mechanism in Plants against Abiotic Stresses	267
<i>Upama Mishra, Gyanendra K. Rai and Sreshti Bagati</i>	
1. Introduction	267
2. MicroRNAs	268
3. Mitogen Activated Protein Kinases	269
4. Antioxidants and Reactive Oxygen Species	269
5. Heat Shock Proteins (HSPs)	271
6. Osmolytes	273
6.1. Proline	273
6.2. Gama Amino Butyric Acid (AGBA)	274
6.3. Polyamines	274

6.4. Glycine Betaine	276
6.5. Sugars	276
6.6. ABA and metabolic adjustments	277
7. References	278
8. Breeding Approaches to Overcome Abiotic Stress	291
<i>Rakhi Bhardwaj, Gyanendra K. Rai, Sreshti Bagati and Abida Parveen</i>	
1. Introduction	291
2. History of Plant Breeding in India	293
3. Breeding Approaches	294
3.1. Conventional Breeding Approaches	294
3.1.1. Domestication	296
3.1.2. Selection under Domestication	296
3.1.3. Mass Selection	297
3.1.4. Pure Line Selection	299
3.1.5. Backcross Breeding	300
3.1.6. Hybridization	302
3.1.7. Polyploidy	305
3.1.8. Mutational Breeding	310
3.2. Unconventional Methods	312
3.2.1. Marker Assisted Breeding	313
3.2.2. Biotechnological Approaches	315
4. Conclusion and Future Perspectives	315
5. References	316
9. Morphological, Physiological, Biochemical and Molecular Responses of Plants to Drought Stress	321
<i>Abida Parveen, Gyanendra K. Rai, Sreshti Bagati, Pradeep Kumar Rai and Praveen Singh</i>	
1. Introduction	322
2. Effects of Drought Stress on Crop Plants	323
3. Successful Strategies under Drought Stress - Resistance, Acclimatization and Plasticity	326

4.	Response of Crop Plants to Drought Stress	326
4.1.	Physiological Implication of Drought	326
4.1.1.	Stomatal Behaviour during Drought Stress	327
4.1.2.	Effect on Pigment Composition and Photosynthesis	328
4.1.3.	Effect on Osmotic Adjustment	326
4.2.	The Molecular Responses Regulated During Drought	329
4.2.1.	ABA induces Gene Expression during Water Deficit	330
4.2.2.	Acid Metabolism	332
5.	Conclusion and Future Perspectives	334
6.	References	336
10.	Stomatal Activities against Abiotic Stress and Selection of Potential Tolerant Horticultural Crops	341
	<i>Deepak Kumar Sarolia, Mukesh K. Berwal and Ramkesh Meena</i>	
1.	Introduction	341
2.	Stomatal Stress and Effect on the Plants	342
3.	Rate of Transpiration	346
4.	Driving Force and Pathway of Transpiration	347
5.	Anti-Transpirants	350
5.1.	Reflecting Materials	
5.2.	Wind Break	352
5.3.	Breeding Technique	352
6.	Selection of Fruits Crops	352
7.	Potential Fruit Crops for Dry land Arid Region	352
8.	Selection of Vegetable Crop and Importance of Vegetable Crops in Arid Region	354
8.1.	Ornamental Trees, Shrubs and Hedges Plants	354
8.2.	Suitable Ornamental Trees	355
8.3.	Suitable Ornamental Shrubs for Arid Region	355
9.	Suggested Readings	356
