1. A role for information theory in personality modeling, assessment, and judgment	
<i>David M. Condon and René Möttus</i>	
Background on Shannon's information theory	2
Analog applications	5
Digital applications	8
Invoking information-theoretic approaches in personality assessment	17
Emphasizing the needs of researchers over test administrators	17
Next steps	20
Towards a digital representation of the analog experience	23
References	24
2. What falls outside of the Big Five? Darkness, derailers, and beyond	
<i>P.D. Harms and Ryne A. Sherman</i>	
Dark personality	34
Dark Triad	35
Hogan personality derailers	38
Alternative models of dark traits	40
Mapping the psychological drivers of dark traits	42
Prediction of work outcomes	43
Positive effects of dark traits	44
Nonlinear relationships	45
Moderators of dark personality	46
Gender	46
Age and time	47
Culture and context	48
Dark personality assessment issues	48
Self-awareness and honest reporting	48
Specificity of measures	49
Highly abbreviated measures	50
Five-factor based models	51
Emerging trends in assessment	52

	Future directions and concluding thoughts	54
	References	57
3.	Semantic and ontological structures of psychological attributes	
	<i>Jan Ketil Arnulf and Kai Rune Larsen</i>	
	Introduction	69
	Like <i>all</i> other people: Language is a strong situation	71
	Digital text analysis	75
	Background	75
	A practical guide to conducting LSA	77
	Comparing texts to Likert scale data	78
	The semantic trap called the jingle-jangle fallacy	80
	Semantic overlap in research: How <i>most</i> people will react	81
	Where semantics failed: The case of personality testing	85
	Like <i>no</i> other people: Individual differences in STSR	87
	Like <i>some</i> other people: Group-level differences identified in STSR	90
	Conclusion: Applications and developments in semantics	93
	References	95
4.	Ubiquitous computing for person-environment research: Opportunities, considerations, and future directions	
	<i>Sumer S. Vaid, Saeed Abdullah, Edison Thomaz, and Gabriella M. Harari</i>	
	Assessing behaviors, persons, and environments with ubicomp devices	104
	Measuring and modeling behaviors	106
	Measuring and modeling persons	118
	Measuring and modeling environments	123
	Outlook	125
	Practical considerations	126
	Ethical considerations	131
	Future directions	132
	Conclusion	134
	References	135
5.	Modeling the mind: Assessment of <i>if ... then ...</i> profiles as a window to shared psychological processes and individual differences	
	<i>Vivian Zayas, Randy T. Lee, and Yuichi Shoda</i>	
	Introduction	145
	Mental inference in daily life: An anecdotal illustration	147
	Cognitive-Affective Processing System theory: Basic principles	148

The CAPS network	148
Original conceptualization and measurement of <i>if ... then ...</i> profiles	151
A contemporary approach to conceptualizing <i>if ... then ...</i> profiles:	
The Highly-Repeated Within-Person (HRWP) approach	153
The HRWP approach: Assessing features present in a situation	154
A primer to the HRWP approach	157
Data-driven, “bottom-up” approach	159
Theory-driven, “top-down” approach	160
How does studying <i>if ... then ...</i> profiles shed light on the personality system?	160
Illustrating the HRWP “top-down” approach: Reanalysis of a transference study	162
Studying transference	163
The HRWP approach to studying transference	165
Reanalysis of the transference study using the HRWP approach	166
Exploring unexplained variability: Identifying systematic variability	173
Implications of using the HRWP approach	177
A more direct approach of assessing intraindividual psychological processes by measuring intraindividual dynamics	178
Bolstering causal inference and assessing the heterogeneity (vs homogeneity) of effects	179
A unified framework for assessing shared psychological processes and individual differences	180
What do <i>if ... then ...</i> profiles reveal about a person?	180
What is an <i>if?</i> Looking forward	181
Applications of the HRWP approach	182
Concluding remarks	183
Appendix	183
R Code	183
References	184

6. Psychological targeting in the age of Big Data

Ruth E. Appel and Sandra C. Matz

Introduction	193
Psychological targeting: A two-stage framework	194
Drivers of psychological targeting: Big Data and Machine Learning	196
New and “bigger” data	196
New analytical techniques	197
The science of psychological targeting	199
Stage 1: Psychological profiling	199
Psychologically-informed interventions	202
Research opportunities	203
Research challenges	206

Practical advice	208
Ethical considerations	209
Ethical opportunities	210
Ethical challenges	211
Suggestions for addressing the ethical challenges	214
Conclusion	216
References	217
7. Virtual environments for the representative assessment of personality: VE-RAP	
<i>Lynn Carol Miller, David C. Jeong, and John L. Christensen</i>	
What is a virtual representative digital environment:	
Relevance?	224
Commercial virtual environments and personality correlates	224
What are we trying to assess dynamically in virtual environments?	225
Virtual environment affordances to leverage for personality assessment	228
Virtual <i>representative</i> environments for correlational and experimental studies	235
Generalizability to everyday life	235
Challenges abound: Why representative virtual environments?	236
Shifting granularity and time scale: Challenges	236
Measuring the “unit” × situation dynamics	237
Virtual environments for representative assessments: How?	238
Overview of formative research needed	238
Target audience	239
Behavioral and script options for the POI: Formative research needed	240
Personality conceptualization	240
Representative locations	241
Affordances	242
Measuring goal-affordance dynamics	242
Scripts, situational-GPRB, and behavioral options	242
Interceptive states and affect	243
Ultimate BOI	244
Discussion	245
Conclusions and future directions	245
References	246
8. Improving measurement of individual differences using social networks	
<i>Andrew Slaughter and Janie Yu</i>	
Introduction	253
Analyzing social structure	254
Descriptive statistics for social structure	255

Integrating models for SNA and IRT	261
Item response theory models for individual differences	261
Measurement models for independent dyads and egocentric networks	264
IRT-ERGM: Integrating models for individual measurement and network structure	268
Example analysis	275
Discussion	279
References	281
9. Situational judgment tests: From low-fidelity simulations to alternative measures of personality and the person-situation interplay	
<i>Filip Lievens, Philipp Schäpers, and Christoph N. Herde</i>	
Introduction	285
SJTs: Definition and brief history	287
Definition	287
Brief history	289
The traditional view: SJTs as low-fidelity simulations	289
Underlying theory and rationale	289
SJT development	290
Construct-related validity evidence	291
Criterion-related validity evidence	292
SJTs in the training context	292
SJTs as alternative measures of personality	293
Characteristics and development	293
Underlying theory	295
Construct-related and criterion-related validity evidence	296
SJTs and the personality-situation interplay	298
Assessment of situation construal	298
Assessment of within-person variability across situations	299
Assessment of situation-trait contingencies	300
Assessment of proactive transactions	301
Assessment of behavioral responses	302
Assessment of narratives and goals	302
Assessment of personality disorders	303
Epilogue	303
References	304
10. Intra-individual variability in personality: A methodological review	
<i>Alisha M. Ness, Kira O. Foley, and Eric Heggstad</i>	
Introduction	313
Foundational issues and approaches underlying IIVP	314
Key contemporary theoretical perspectives on IIVP	318
Examining the current state of the literature and future recommendations	323

Theories of IIVP	325
Research designs for intensive longitudinal data	329
Personality state measurement	336
Statistical techniques for examining IIVP	339
Key findings from the literature	342
Describing the nature of IIVP	342
Antecedents and outcomes of IIVP	344
Examining relationships at the state-level	345
Conclusion	345
References	346
11. Modeling the dynamics of action	
<i>Ashley D. Brown and William Revelle</i>	
Personality is multilayered and spatiotemporally coherent	355
A glimpse of dynamics' distant past	357
Observing and explaining behavioral dynamics	357
Cattell and the data box	358
Dynamics in the marginally more modern era	360
Time and change	360
Descriptive models	362
Dynamic processes and stochastic variation aren't the same	363
Dynamic cybernetic models	364
Part 1: Cognitive maps and TOTE units	364
Part 2: Set points and ponderostats	366
Part 3: Human models	367
The dynamics of action model	368
The Cues-Tendencies-Actions model	370
CTA + Reinforcement Sensitivity Theory = CTARST	372
Reinforcement sensitivity theory	372
Building CTARST	373
CTARST models real data from three real studies	373
CTARST output and its relation to personality	376
Conclusions and future directions	378
References	380
12. Conceptualizing and measuring the implicit personality: The state of the science	
<i>Amanda N. Moeller, Benjamin N. Johnson, Kenneth N. Levy, and James M. LeBreton</i>	
Projective measures	393
Exemplary projective measures: Thematic apperception test and picture story exercise	393
State of the field of projective measures	394
Major advantages of projective measures	395
Critiques of projective measures	395

Predictive validity of projective measures	396
Response latency measures	397
Exemplary response latency measure: The implicit association test	398
State of the field of response latency measures	399
Major advantages of response latency measures	401
Critiques of response latency measures	402
Predictive validity of response latency measures	403
Conditional reasoning measures	406
Exemplary conditional reasoning measure: Conditional reasoning test for aggression	407
State of the field of conditional reasoning measures	408
Major advantages of conditional reasoning measures	409
Critiques of conditional reasoning measures	409
Predictive validity of conditional reasoning measures	410
Application of various measurement systems for understanding the implicit personality	411
Projective measures	411
Response latency measures	412
Conditional reasoning measures	413
Implications and future directions	413
Summary	416
Declaration of conflicting interests	417
Funding	417
References	417
13. Conceptualizing and measuring the psychological situation	
<i>John F. Rauthmann and Ryne A. Sherman</i>	
Conceptualization	427
Terminology	427
Situational Cs	430
Other situational concepts	433
Characteristics contra cues and classes	435
Reality	438
Principles	442
Measurement	445
Rater types	446
Instruction sets	447
Toward an integration: The componential agreement Lens model of situations (CALMS)	448
Basic concepts and variables	449
Quantifying agreement	452
Explaining agreement	452
Contextualizing agreement	453
Treating agreements as correlates	456

Modeling	456
Some future directions	456
References	457
14. Network approaches to representing and understanding personality dynamics	
<i>Emorie D. Beck and Joshua J. Jackson</i>	
Early thinking on dynamics	466
Allport: Theorizing on dynamic organization	466
Cattell: Formalizing dynamic organization	467
Structure vs dynamics: The person-situation debate	468
Social cognitive approaches to personality	469
Recent thinking on dynamics	473
Within-person variability	473
The future of dynamics	475
A dynamic systems theory of personality	475
Network tools	478
Redefining processes and dynamics	487
Systems: It's about equilibria	488
Conclusion	493
References	494
15. Neural network models of personality structure and dynamics	
<i>Stephen J. Read and Lynn Carol Miller</i>	
A neural network model of personality	502
Theoretical background: Components and structure of the VIP model	503
Underlying neurobiology	506
Neural network implementation	507
Simulations	513
Implications for learning and change	530
Implications for measurement of personality	532
Implications for predictions of behavior	533
Summary/Discussion	534
References	535
16. Interdependence approaches to the person and the situation	
<i>Fabiola H. Gerpott, Isabel Thielmann, and Daniel Balliet</i>	
Dimensions of interdependence	540
Mutual dependence	540
Power	541
Conflict	541

Coordination	542
Future interdependence	542
Information certainty	543
How personality shapes behavior in (objective) interdependent situations	543
Affordances for the expression of personality in (objective) interdependent situations	544
Assessing subjective interdependence	548
The influence of personality on subjective representations of interdependent situations	551
Objective vs subjective interdependent situations and behavior: A research agenda on the role of the person	553
The role of interdependence perceptions in linking personality and behavior	554
The influence of the interaction partner on an actor's situation perception	555
Interaction effects between the interdependence dimensions	557
Conclusion	558
References	559
17. Formally representing how psychological processes shape actions and one another using functional fields	
<i>Dustin Wood</i>	
Basics of functional field models	566
The functionality assumption	567
Formally representing situations within field models	568
The mediation principle: All forces have mediating processes, and all actions have reasons	570
The sources of forces: How people use information to construct the psychological situation	572
Functional field models as underlying our model of the "Field at a given time"	572
Identifying the <i>field effects</i> (i.e., <i>traits</i>) of a particular factor	577
Model-based estimation of field effects	578
Experiment-based estimation of field effects	579
Representing verbal descriptions of actions, people, and situations within field models	587
Verbal statements as the outcomes of tests on the person's mental model of the world	587
The value of trait information	595
Using functional fields to represent arguments about how traits relate to one another	596
Representing semantically redundant relationships	597
Functional relationships between traits	598
Representing sources of trait covariation	601

Some broader implications of functional field models for understanding behavior	606
Action selection is situation selection	606
Q: Why did they do it? A: Why don't you just ask?	607
Conclusion	608
References	609
18. Integrating Cybernetic Big Five Theory with the free energy principle: A new strategy for modeling personalities as complex systems	
<i>Adam Safron and Colin G. DeYoung</i>	
A cybernetic approach to personality	617
The free energy principle and CB5T	620
Predictive processing and personality neuroscience	623
Active inference (AI)	625
Generative models and personality modeling	628
Personality traits from the perspectives of CB5T and FEP-AI	633
The metatraits	635
The Big Five	637
Conclusion: Levels of analysis in personality modeling	640
References	642
19. Computational models of appraisal to understand the person-situation relation	
<i>Nutchanon Yongsatianchot and Stacy Marsella</i>	
Introduction	651
Emotion as a window on types of situation	652
Appraisal theories of emotion	654
Lazarus' appraisal theory	655
The component process model (Scherer, 1984, 2009, 2013)	656
The Ortony, Clore, Collins model (Clore & Ortony, 2013; Ortony, Clore, & Collins, 1990)	660
Computational models of appraisal theory of emotion	663
EMA (Gratch & Marsella, 2004; Marsella & Gratch, 2009)	667
Appraisals in EMA	667
Emotion derivation in EMA	668
Coping in EMA	669
EMA and situations: Implications of model	670
Concluding remarks	671
References	672
20. An economic approach to modeling personality	
<i>Lex Borghans and Trudie Schils</i>	
Introduction	675
Economic literature about personality	677

The basics of an economic model	681
Personality and situation	683
Introducing personality to the model	684
Selection into situation	687
Choosing a situation	687
Introducing sorting into the situation in an economic model of personality	688
Ability versus preferences	690
Personality: a preference and/or an ability?	690
Model	691
Implications	691
The role of incentives	692
Conclusion	694
