Contents

Contributors ix

1. Abiotic stress and plant response: Adaptive mechanisms of plants against multiple stresses

SUKUMAR TARIA, MAHESH KUMAR, BADRE ALAM,
SUDHIR KUMAR, SUSHIL KUMAR, SUMAN ROY,
SUDHIR KUMAR, AND JAGADISH RANE

1. Introduction 1
2. High-temperature stress and its tolerance mechanisms 2
3. Drought stress and mechanism of tolerance 4
4. Cold stress and its tolerance 7
5. Salinity stress and its tolerance mechanism 8
6. Flooding stress and its tolerance mechanism in plants 11
7. Future perceptsives 13
- References 13

2. Plant microbiome: Modulation of plant defense and ecological dynamics under stressed environment

RAZAK HUSSAIN, SHIKHA SHARMA, GEETIKA, INDU KUMARI,
AND MUSHTAQ AHMED

1. Introduction 19
2. Plant microbiome 21
3. Plant growth-promoting microbes and abiotic stresses 22
4. Plant growth-promoting microbes and biotic stress (pathogenic microbes such as pathogenic bacteria, fungi, viroids, insects, and nematodes) 30
5. Plant-microbiome interactions studied by metagenomics and metabolomics 35

6. Conclusion and future prospect 35
- Acknowledgment 36
- References 36

3. The role of bacterial ACC deaminase and trehalose in increasing salt and drought tolerance in plants

MA. DEL CARMEN OROZCO-MOSQUEDA, AJAY KUMAR,
BERNARD R. GLICK, AND GUSTAVO SANTOYO

1. Introduction 41
2. Drought and salinity of soils 42
3. Effects of drought and salinity on plants 43
4. Plant growth-promoting bacteria 45
5. ACC deaminase 46
6. Trehalose 46
7. Synergy between ACC deaminase and trehalose 48
8. Conclusions 49
- Acknowledgment 49
- References 49

4. Microbial management of crop abiotic stress: Current trends and prospects

ARTI GAUTAM AND AKHILESH KUMAR PANDEY

1. Introduction 53
2. Effect of abiotic stresses on plants 55
3. Plant growth-promoting microorganism and their interaction with plants 56
4. Biochemical and molecular mechanisms of plant-microbe interactions 63
5. Interaction of genes and their cross talks 65
6. Phytoremediation using plant-microbe interactions 66
7. Conclusion and future prospects 67
- References 67

5. Microbial elicitors: Positive and negative modulators of plant defense

J. BESLIN JOSHI, JULIE A. MAUPIN-FURLOW,
AND SIVAKUMAR UTHANDI

1. Introduction 77
2. Microbial elicitors 78
3. Types of microbial elicitors 78
4. Bacterial elicitors 80
5. Fungal elicitors 83
6. Elicitors from *Oomycetes* 84
7. Viral elicitors 86
8. Defense regulation of microbial elicitors 86
9. Role of microbial elicitors in plant defense elicitation 89
10. Conclusions 91
- References 92

6. Microbial behavior, responses toward salinity stress, mechanism of microbe-mediated remediation for sustainable crop production

S.M. TAMILSELVI, CHITDESHWARI THIYAGARAJAN,
VETIMURUGAN ELUMALAI, AND SIVAKUMAR UTHANDI

1. Introduction 103
2. Soil salinization 104
3. Salinity status 106
4. Salinization and its impact 106
5. Remediation of salinization 110
6. Microbial reclamation of salt-affected soils 111
7. Microbial mechanism to salinity tolerance 112
8. Conclusions and future directions 116
- References 116
- Further reading 127

7. Microbe-mediated alleviation of heat stress in plant: Current trends and applications

KUMAR ABHISHEK, DEBABRATA DAS, SHILADITYA DEY,
AND POOJA SINGH

1. Introduction 129
2. Significant types of heat-related stresses in plants 131
3. Plant response to heat stress 132
4. Drought tolerance using microbes 134
5. Role of the rhizosphere microenvironment in microbe-mediated functions 136
6. Potential benefits and possible mechanisms of microbial interactions 136

7. A coping mechanism to heat stress at an ecosystem level 137
8. Current research trends for developing heat tolerance in plants 138
9. Drought mitigation using plant growth-promoting bacteria and AM fungi 139
10. Future perspective for research on developing heat tolerance in plants 140
11. Conclusions 141
- References 142

8. Harnessing endophytic microbial diversity for stress alleviation: Current perspectives for crop improvement

PALLAVI MISHRA, SHAILESH K. TIWARI, ACHUIT K. SINGH,
AND MD. ZUBBAIR MALIK

1. Introduction 149
2. Agricultural applications of endophytic microbes in crop improvement 151
3. How do plants respond to stressful environments? An overview 152
4. Endophytic microbial diversity from extremes of environment: Opportunities for plant stress alleviation 154
5. Endophytic microbes and their effects in different crop plants under stress 162
6. Conclusion and future perspectives 162
- References 167

9. Functional genomics tools for studying microbe-mediated stress tolerance in plants

ISHSIRJAN KAUR CHANDOK, HEENA AFREEN,
RUKHSAR AFREEN, SHAZIA HAIDER,
DURGA PRASAD MOHARANA, TOUSEEF HUSSAIN,
MOHD AAMIR, V. SHANMUGAM, AND MD. ZUBBAIR MALIK

1. Introduction 175
2. Types of abiotic and biotic stresses in plants 178
3. Functional genomics tools 179
4. RNA interference (RNAi) or RNA silencing 182
5. Application and limitations 187
6. Microbe mediated stress tolerance and functional genomics 191
7. Metagenomics, metatranscriptomics, and metaproteomics 191
8. Transcriptomics 192

9. Proteomics 193
10. Microbial genome annotation and cluster of orthologous groups (COGs) 193
11. Metabolomics 195
12. CRISPR/Cas9: A new paradigm in functional genomics 196
13. Conclusions 196
- Acknowledgment 197
- Author contributions 197
- Competing interests 197
- References 197

10. Role of exopolysaccharide and biofilms in microorganisms for alleviating salt stress

SWETA JHA, ADITYA ABHA SINGH, AND NIRMLADEVI THAKUR

1. Salinity as abiotic stress 205
2. Microbial diversity of the saline environment 207
3. Methods of alleviation of salt stress 210
4. Biofilm 212
5. Biofilm formation 213
6. Role of extracellular polymeric substances (EPSs) in biofilm formation 215
7. Significance of communication in biofilm 217
8. Alleviation of the salt stress 217
9. Application studies of EPS-producing microorganisms 222
10. Conclusions 225
- References 225

11. Soil salinization and bioremediation using halophiles and halotolerant microorganisms

SUSANTA KUNDU, SUSAN JACOB PERINJELIL, AND NIRMLADEVI THAKUR

1. Introduction 231
2. Plant response to salt stress 235
3. Salt management strategies 237
4. Halophiles and halotolerant microorganisms 242
5. Mechanisms of plant growth promotion by halophilic and halotolerant microorganisms 245
6. Use of halophiles and halotolerant bacteria to remediate saline soil for sustainable agriculture 249
7. Conclusion 251
- References 252

12. Role of plant growth-promoting bacteria (PGPB) in abiotic stress management

ZOBIA KHATOON, SUILIANG HUANG, MUHAMMAD ASAD FAROOQ, GUSTAVO SANTOYO, MAZHAR RAFIQUE, SANAM JAVED, AND BUSHRA GUL

1. Introduction 257
2. Drought stress management by PGPR 258
3. Salt stress management by PGPR 260
4. Phytopathogens management under stress conditions by PGPR 261
5. Heavy metal stress management by PGPR 262
6. Heat stress management by PGPR 263
7. Cold stress management by PGPR 264
8. Conclusions 265
- Acknowledgment 268
- Author contribution 268
- Conflict of interest 268
- References 268

13. An insight on developing nanoformulations suitable for delivering plant beneficial microorganisms to crops under abiotic stresses

HARIPRIYA SHANMUGAM

1. Introduction 273
2. Developing Nanoformulation for PBMs 274
3. Excipients for nanoformulation 274
4. Nanoformulations for PBMs delivery 284
5. Release mechanisms of loaded microbes 289
6. Modes of delivery of PBMs-loaded nanoformulations 290
7. Biosafety of nanoformulations 291
8. Conclusions 292
- References 292

14. Salt tolerance in plants: Using OMICS to assess the impact of plant growth-promoting bacteria (PGPB)

GERRY APLANG JANA, BERNARD R. GLICK, AND MAHMOUD W. YAISH

1. Salinity is a global problem in agriculture production 299
2. Effect of salinity on plants 300
3. Physiological and the molecular responses to salinity in plants 300
4. Mechanisms of salt tolerance in plants 301

5. Plant growth-promoting bacteria 303
6. OMICS enhanced understanding of stress tolerance mechanisms induced by PGPB in plants 308
7. Conclusions 313
- Acknowledgment 313
- References 313

15. Abiotic stress-mediated transcription regulation, chromatin dynamics, and gene expression in plants: *Arabidopsis* as a role model

PALLAVI MISHRA, POOJA SINGH, ASHUTOSH RAI,
KUMAR ABHISHEK, V. SHANMUGAM, MOHD AAMIR,
AJAY KUMAR, MD. ZUBBAIR MALIK,
AND SUSHIL KUMAR SINGH

1. Introduction 321
2. Histone variants 326
3. Epigenetic modifications 327
4. DNA methylation 329
5. Histone modification 329
6. Histone-modifying enzymes 330
7. Histone acetylation/deacetylation 330
8. Histone methylation/demethylation 335
9. Other histone modifications 336
10. RNA-directed DNA methylation 337
11. miRNA 337
12. siRNA 338
13. Chromatin remodeling factors 338
14. Conclusions 339
- References 339
- Further reading 345

16. Cytoskeleton in abiotic stress signaling

ELSA-HERMINIA QUEZADA, MANOJ-KUMAR ARTHIKALA,
AND KALPANA NANJAREDDY

1. Introduction 347
2. Types of cytoskeleton in plants 348
3. Methods to visualize the cytoskeleton 352
4. Cytoskeleton under different types of abiotic stress 354
5. Conclusions 363
- Acknowledgments 363
- References 363

17. Absciscic acid: a critical player in rhizobacteria-mediated root behavior and adaptation to environmental stress

GUSTAVO RAVELO-ORTEGA, JESÚS SALVADOR LÓPEZ-BUCIO,
AND JOSÉ LÓPEZ-BUCIO

1. Introduction 373
2. An overview of the functions of abscisic acid in plants 374
3. Absciscic acid in rhizobacteria-mediated plant protection to abiotic stress 376
4. Root movements guided by abscisic acid and rhizobacteria 377
5. Bacterial-root cross talk: The language of amino lipids and abscisic acid 378
6. Root architecture alterations by rhizobacteria involve target of rapamycin signaling 380
7. Conclusions 382
- References 383
