Basic Bioscience Laboratory Techniques

A Pocket Guide

Second Edition

Philip L.R. Bonner and Alan J. Hargreaves

WILEY Blackwell

CONTENTS

Preface	vii
Glossary	ix
Abbreviations	xiii
About the Companion Website	xvii
1 The Preparation of Solutions in Bioscience Research	1
1.1 Introduction	1
1.2 Concentration	2
1.3 Using a Balance to Weigh Out Reagents	2
1.4 Practical Considerations When Making a 1.0M Solution	5
1.5 Dilutions and the Use of Pipettes	9
1.6 Water, Acids and Bases	13
1.7 Buffers	16
1.8 The Equilibrium/Dissociation Constant (K_a) for an Acid or Base and the Henderson–Hasselbalch Equation	18
1.9 Summary	20
Notes	20
2 Microscopy	21
2.1 Introduction	21
2.2 Microscopes – General Principles	22
2.3 Principles of Image Formation	23
2.4 Light Microscopy	25
2.5 Electron Microscopy	36
2.6 Summary	39
3 Spectrophotometry	41
3.1 Introduction	41
3.2 The Electromagnetic Spectrum	41
3.3 The Absorbance of Light	43
3.4 Absorption Spectrophotometry	45
3.5 The Laws Governing the Absorbance of Light	45
3.6 The Beer–Lambert Law	47
3.7 Spectrophotometers	49
3.8 Applications of Spectrophotometry in Bioscience	54
3.9 Summary	62
Notes	62
4 Data Analysis and Presentation	63
4.1 Introduction	63
4.2 Statistical Analysis of Data: Some Key Definitions	64
4.3 Distributions	67
4.4 Statistical Comparison of Data	70
4.5 Presentation, Structure and Organization of Data in Laboratory Reports	77
4.6 Summary	82

5	The Extraction and Clarification of Biological Material	83
5.1	Introduction	83
5.2	Extraction	83
5.3	The Extraction Methods Used for Animal and Plant Tissue	84
5.4	The Extraction Methods for Bacteria	86
5.5	Clarification	87
5.6	Centrifugation Techniques	92
5.7	Points of Good Practice in Centrifugation	93
5.8	Summary	94
	Notes	95
6	Electrophoresis of Proteins and Nucleic Acids	97
6.1	General Introduction	97
6.2	Separation of Protein Mixtures by Gel Electrophoresis	97
6.3	Other Electrophoretic Techniques Applied to Proteins	106
6.4	Separation of Nucleic Acids by Gel Electrophoresis	110
6.5	Applications of Gel Electrophoresis of Nucleic Acids	113
6.6	Summary	115
7	Chromatography	117
7.1	Introduction	117
7.2	The Theory of Chromatography	117
7.3	Factors to Consider in Chromatography	120
7.4	The Methods Used to Elute Samples in Chromatography	122
7.5	A Selection of Methods that Can be Used to Exchange Buffers and Concentrate Samples Prior to Chromatography	123
7.6	Vacuum Pumps	127
7.7	Different Types of Chromatography and What Properties Can be Used to Separate Molecules	128
7.8	Thin-layer Chromatography (TLC)	130
7.9	High-Pressure Liquid Chromatography (HPLC)	131
7.10	Gas/Liquid Chromatography (GLC)	133
7.11	Ion Exchange Chromatography (IEX)	134
7.12	Size Exclusion Chromatography (SEC)	136
7.13	Affinity Chromatography	138
7.14	Summary	139
	Notes	139
8	Cell Culture Techniques	141
8.1	Introduction	141
8.2	Growth and Maintenance of Cells in Culture	145
8.3	Summary	157
	Notes	157
9	Antibody-Based Assays (Immunoassays)	159
9.1	Antibody Structure and Uses	159
9.2	Antibody Purification, Labelling and Detection	160
9.3	Immunoassay Methods	162
9.4	Controls	175
9.5	Summary	175
	Suggestions for Further Reading	177
	Index	181
