# Machine Learning Theory to Applications

---

**Seyedeh Leili Mirtaheri**

Assistant Professor, Electrical and Computer Engineering Department  
Kharazmi University, Tehran

**Reza Shahbazian**

Electrical Engineering Research Group  
Faculty of Technology and Engineering Research Center  
Standard Research Institute, Alborz and  
Department of Mathematics and Computer Science  
University of Calabria, Italy

**CRC Press**

Taylor & Francis Group  
Boca Raton London New York

CRC Press is an imprint of the  
Taylor & Francis Group, an Informa business  
A SCIENCE PUBLISHERS BOOK

# Contents

<i>Preface</i>	iii
<i>Abbreviations</i>	viii
1. Introduction	1
2. Linear Algebra	9
Matrix rules	10
Eigenvalues and eigenvectors	14
LU decomposition	14
Statistics and probabilities	15
Momentums	15
Expectation	15
Multivariate distributions	16
Cauchy distribution	16
Dirichlet distribution	16
Multimodal distribution	16
Student's t distribution	17
Gaussian distribution	17
3. Machine Learning	18
Machine learning approaches	19
Historical background	19
Data mining	20
Optimization	21
Statistics	30
Theory	31
Different kinds of learning algorithms	31
Supervised learning	32
Unsupervised learning	32
K means clustering	33
Principal component analysis	35
Semi-supervised learning	38
Reinforcement learning	39

Self-learning	47
Feature learning	48
Machine learning models	48
Linear regression	49
Logistic regression	56
K nearest neighbor classifier	59
Naïve Bayesian classifier	62
Artificial neural networks	66
Decision trees and random forests	86
Support vector machines	87
Bayesian networks	93
Genetic algorithms	94
Federated learning	95
4. Some Practical Notes	97
Resampling method	97
Cross validation	98
Leave one out cross validation	99
K-fold cross validation	99
Metrics	100
Accuracy	101
Precision	101
Recall	101
F1 score	102
Normalization	102
Overfitting and underfitting	104
Regularization	110
Ridge regression	111
Lasso regression	112
Dropout regularization	113
Ceiling analysis	115
5. Deep Learning	118
Overview	119
Interpretations	121
Artificial neural networks	121
Deep neural networks	122
Deep learning algorithms	123
Convolutional neural networks	123
Recurrent neural networks	148
Long short term memory networks	152
Generative adversarial networks	153
Radial basis function networks (RBFNs)	154

Multi-layer perceptrons (MLP)	154
Deep belief networks	154
Restricted Boltzmann machines	155
Autoencoders	155
Challenges	156
6. Generative Adversarial Networks	158
Generative Adversarial Networks (GANs)	158
Conditional GAN (CGAN)	161
Auxiliary Classifier GAN (AC-GAN)	162
Wasserstein GAN (WGAN)	163
WGAN with Gradient Penalty (WGAN-GP)	164
Info GAN	165
Least Square GAN (LSGAN)	166
Bidirectional GAN (BiGAN)	167
Dual GAN	168
Deep Convolutional GAN (DCGAN)	169
7. Implementation	171
Accelerated computing	172
Machine learning frameworks and libraries	175
No need for special hardware support	176
Interactive data analytic and visualization tools	180
Deep learning frameworks and libraries	181
TensorFlow	181
Keras	182
Microsoft CNTK	183
Caffe	184
Caffe2	184
Torch	185
PyTorch	186
MXNet	186
Chainer	187
Theano	188
Deep learning wrapper libraries	188
References	190
<i>Index</i>	197
