

Protection of Modern Power Systems

Janaka Ekanayake • Vladimir Terzija
Ajith Tennakoon • Athula Rajapakse

WILEY

Protection of Modern Power Systems

Janaka Ekanayake

*Senior Professor, University of Peradeniya, Sri Lanka and Visiting Professor,
Cardiff University, UK*

Vladimir Terzija

Professor, University of Newcastle, UK

Ajith Tennakoon

Senior Power Systems Engineer, Vysus Group, Australia

Athula Rajapakse

Professor, University of Manitoba, Canada

Contents

Preface	<i>xiii</i>
About the Authors	<i>xv</i>
List of Abbreviations	<i>xvii</i>
About the Companion Website	<i>xix</i>

1	Review of Principles of Protection	1
1.1	Introduction	1
1.2	Historical Development	1
1.3	Faults, Fault Currents, Voltages, and Protection	2
1.3.1	Types of Faults	2
1.3.2	Currents and Voltages under Fault Situations and Protection	2
1.4	Fault Current Contribution from Generators	5
1.5	Philosophy of Protection Relaying	5
1.5.1	Selectivity	5
1.5.2	Speed of Operation	5
1.5.3	Sensitivity	5
1.5.4	Reliability, Dependability, and Security	6
1.5.5	Primary and Backup Protection	6
1.5.6	Unit and Non-Unit Protection	6
1.6	Review Questions	6
1.7	Problems	6
2	Instrument Transformers	9
2.1	Introduction	9
2.2	Basic Principles of Operation	10
2.2.1	Shunt Mode	10
2.2.2	Series Mode	10
2.3	Current Transformers (CTS)	11
2.3.1	Steady-state Theory	11
2.3.2	Excitation Current	12
2.3.3	Excitation Characteristic	13
2.3.4	Terminal Marking and Polarity	13
2.3.5	CT Burden	14

2.3.6	CT Errors	14
2.3.7	Accuracy Classes	15
2.3.8	Accuracy Limit Factor	16
2.3.9	Rated Currents	16
2.4	Transient Response of CTs	17
2.4.1	Power System Fault Current	17
2.4.2	Flux Required to Transform the Primary Current	18
2.4.3	Transient Factor	19
2.4.4	Peak Transient Factor	20
2.4.5	Maximum Peak Transient Factor ($K_{fp,max}$)	21
2.4.6	Transient Dimensioning Factor K_{td} for Specific Time t_{al}	21
2.4.7	Rated Equivalent Limiting Secondary Voltage (E_{al})	22
2.4.8	Primary Time Constant (TP) with Multiple Infeeds	23
2.4.9	Over-dimensioning Factor (K_h) Due Remanence	23
2.4.10	Duty Cycle	23
2.4.11	Auto-reclosing	23
2.4.12	Errors	24
2.4.13	CT Classes for Transient Performance	25
2.5	Selection of a CT	26
2.5.1	Rated Primary Current	26
2.5.2	Rated Secondary Current	26
2.5.3	Class, Burden, and ALF of the CTs	27
2.6	Voltage Transformers	32
2.6.1	Inductive Voltage Transformers	32
2.6.2	Inductive Voltage Transformer Errors	33
2.6.3	Inductive Voltage Transformer Classes	33
2.6.4	Inductive Voltage Transformer Selection	34
2.6.5	Terminal Marking	35
2.6.6	Inductive Voltage Transformer Transient Behaviour	35
2.6.7	Voltage Transformer Connections	35
2.7	Capacitor Voltage Transformer	36
2.7.1	Capacitive Voltage Transformer Errors	37
2.7.2	Capacitive Voltage Transformer Classes	37
2.7.3	Transient Behaviour	38
2.8	Non-Conventional Current and Voltage Transformers	39
2.8.1	Introduction	39
2.8.2	Non-Conventional CTs	40
2.8.3	Optical Voltage Transformers	45
2.9	Review Questions	45
2.10	Problems	46
3	Review of Principles of Protection	49
3.1	Introduction	49
3.2	Excess Current Protection	49
3.2.1	Discrimination by Current	50

3.2.2	Discrimination by Time	51
3.2.3	Discrimination by Time and Current	52
3.2.4	Inverse Characteristics	52
3.2.5	Grading of Relays	54
3.2.6	Co-ordination with Fuses	55
3.2.7	Plug Setting and Plug Setting Multiplier	56
3.2.8	Time Multiplier Setting	56
3.2.9	Discrimination When There Is a Delta-star Transformer	56
3.2.10	Earth Fault Protection	61
3.2.11	Directional Relaying	61
3.3	Differential Protection	62
3.3.1	Transformer Differential Protection	63
3.3.2	Protection Against Inter Turn Faults and Earth Faults	65
3.3.3	Feeder Differential Protection	70
3.4	Distance Protection	73
3.4.1	General Principles	73
3.4.2	Zones	74
3.4.3	Characteristic Presentation	75
3.4.4	Distance Relay Inputs for Three-Phase Faults and Phase-to-Phase Faults	75
3.4.5	Relationship Between Relay Voltage and Z_S / Z_L Ratio	76
3.4.6	Distance Measurement	77
3.4.7	Distance Relay Tele-protection Schemes	77
3.5	Overload Protection	79
3.5.1	Overhead Lines	80
3.5.2	Transformers	80
3.5.3	Generators	81
3.6	Load Shedding	81
3.7	Over-Flux Protection	84
3.8	Review Questions	84
3.9	Problems	85
4	Protection of Distributed Generation	91
4.1	Introduction	91
4.2	Fault Current Contribution from Different Generators	92
4.2.1	Synchronous Generators	92
4.2.2	Single-fed Induction Generators	93
4.2.3	Doubly-fed Induction Generators	94
4.2.4	Full Power Converter Generators	95
4.3	Protection of Distributed Generation	96
4.3.1	Protection of Faults within a DG	96
4.3.2	Protection Requirements for DGs Connected to a Distribution Network	97
4.3.3	Distribution System Earth Fault Protection	99
4.3.4	Mains Failure Protection	100
4.4	Effect of DG on Distribution Network Protection	101
4.4.1	Blinding of Protection	101

4.4.2	False Tripping	105
4.4.3	Issues with Recloser Operations	108
4.4.4	Impact on Distance Protection	110
4.5	Review Questions	111
4.6	Problems	111
5	Protection of Wind Farms	115
5.1	Introduction	115
5.2	Wind Turbine Configurations	115
5.2.1	Fixed Speed Wind Turbines	115
5.2.2	Doubly Fed Induction Generator Wind Turbines	116
5.2.3	Fully Rated Wind Turbines	116
5.3	Wind Turbine Fault Protection	117
5.4	Protection of On-shore Wind Farms	121
5.4.1	Protection Associated with Grid Interface	121
5.4.2	Protection Associated with Collector Network	124
5.4.3	Lightning and Surge Protection for Wind Farms	128
5.5	Protection of Offshore Wind Farms	129
5.5.1	Protection of LCC-HVDC	131
5.5.2	Protection of VSC-HVDC	131
5.6	Review Questions	133
5.7	Problems	134
6	Protection of PV Plants	137
6.1	Introduction	137
6.2	Components of a Solar PV Plant	137
6.2.1	PV Cells, Modules, or Arrays	137
6.2.2	Power Conversion and Conditioning Equipment	141
6.2.3	Controller	143
6.3	Protection of Rooftop Solar PV Systems	143
6.4	Protection of Ground Mounted Solar PV Systems	145
6.5	Review Questions	151
6.6	Problems	151
7	Signal Acquisition and Processing for Intelligent Electronic Devices	153
7.1	Introduction	153
7.2	Signal Parameters for an Intelligent Electronic Device	153
7.2.1	Signals under Normal and Abnormal Conditions	153
7.2.2	Spectral Content of CT/VT Measurements	154
7.3	Nyquist Sampling Theorem and Aliasing	155
7.4	A to D Conversion	158
7.4.1	Sampling	158
7.4.2	Quantisation and Encoding	159
7.4.3	Issues with A to D	160
7.4.4	A to D Conversion Techniques: Successive Approximation Method	163

7.5	Discrete-Time Signal Analysis	164
7.5.1	Discrete Fourier Transform	165
7.6	Sine and Cosine Filter	168
7.7	Review Questions	172
7.8	Problems	172
8	Numerical Relays	175
8.1	Introduction	175
8.2	Components of a Numerical Relay	175
8.2.1	I/V Converter	176
8.2.2	Anti-aliasing Filter	176
8.2.3	Sample and Hold Circuit, Multiplexer, and A to D Converter (ADC)	178
8.2.4	Microprocessor	179
8.3	Numerical Overcurrent Relay	180
8.4	Numerical Distance Relay	180
8.5	Numerical Differential Protection	186
8.6	Review Questions	188
8.7	Problems	188
9	Substation Automation and IEC 61850	191
9.1	Introduction	191
9.2	Substation Automation	192
9.2.1	Input/Output Devices	192
9.2.2	Relaying and Controlling Equipment	192
9.2.3	Remote Terminal Units	193
9.2.4	Station Computer	193
9.2.5	Human-machine Interface	193
9.2.6	Supervisory Control and Data Acquisition System	194
9.3	Communication between Substation Equipment	194
9.3.1	Physical Media for Communication	194
9.3.2	Serial Communication	196
9.4	Connection of Substation Equipment	198
9.5	IEC 61850	200
9.5.1	The IEC 61850 Data Model	200
9.5.2	Time-critical Information Exchange	206
9.5.3	Sampled Values	209
9.5.4	SA Design	210
9.6	Review Questions	211
9.7	Problems	212
10	Wide Area Monitoring, Protection, and Control Fundamentals	215
10.1	System Needs for Wide Area Monitoring, Protection, and Control	215
10.2	Synchronised Measurement Technology	216
10.2.1	Definition of Synchrophasors	217
10.2.2	Synchrophasor Measurement Errors	218

10.2.3	Timing Sources	219
10.2.4	Phasor Measurement Unit	220
10.2.5	PMU Measurement Latency	221
10.2.6	Phasor Data Concentrators	222
10.2.7	Communication Infrastructure	223
10.2.8	Architecture of Synchrophasor Measurement Systems	224
10.2.9	Communication Networks for WAMPAC System	225
10.3	Wide Area Monitoring, Protection, and Control Applications	226
10.3.1	Post-disturbance Analysis and Model Validation	228
10.3.2	Characterisation of Load Centres	229
10.3.3	Monitoring of Parameters of Synchronous Generators	232
10.3.4	PMU-based State Estimation	233
10.3.5	PMU-based Monitoring of Inter-area Oscillations	239
10.3.6	PMU-based Coordinated Power Oscillations Damping	240
10.3.7	PMU-based Adaptive Underfrequency Load-shedding and Smart Frequency Control	242
10.3.8	Adaptive PMU Based Fault Location Method	245
10.3.9	Transmission Line Fault Location Based on Time Synchronised Samples	248
10.4	Practical WAMPAC Examples and Installations	252
10.4.1	Future Intelligent Transmission Network Substation (FITNESS) Project	253
10.4.2	Visualisation of Real Time System Dynamics Using Enhanced Monitoring (VISOR) Project	254
10.4.3	The Enhanced Frequency Control Capability (EFCC) Project	258
10.5	Review Questions	260
