Introduction to Materials Science and Engineering: A Design-Led Approach

Michael Ashby, Hugh Shercliff, and David Cebon
Department of Engineering, University of Cambridge, UK

Butterworth-Heinemann
An imprint of Elsevier

Contents

Preface	xi
Acknowledgements	xv
Resources that accompany this book	xvii

Chapter 1 Introduction: materials — history, classification, and properties	1
1.1 Materials science and engineering: a bit of history	2
1.2 Classifying materials	4
1.3 Material properties	5
1.4 Material property charts	15
1.5 Summary and conclusions	17
1.6 Further reading	18
1.7 Exercises	18

Chapter 2 Materials, processes, and design	21
2.1 Introduction and synopsis	22
2.2 Classification of materials and processes	23
2.3 The design process, and selection of material and process	28
2.4 The selection strategy: translation, screening, ranking, and technical evaluation	33
2.5 Summary and conclusions	37
2.6 Further reading	37
2.7 Exercises	38

Chapter 3 Material properties and microstructure — overview and atom-scale fundamentals	43
3.1 Introduction and synopsis	44
3.2 Material properties and length-scales	45
3.3 Atomic structure and inter-atomic bonding	50
3.4 Atomic and molecular packing in solids	61
3.5 The physical origin of density	69
3.6 Summary and conclusions	70
3.7 Further reading	71
3.8 Exercises	71

Chapter 4 Elastic stiffness and stiffness-limited applications	73
4.1 Introduction and synopsis	74
4.2 Stress, strain, and elastic moduli	75
4.3 The big picture: material property charts	84
4.4 The physical origin of elastic moduli	86
4.5 Manipulating the modulus and density	91
4.6 Introductory solid mechanics – elasticity and stiffness	96
4.7 Introduction to material selection	103
4.8 Summary and conclusions	104
4.9 Further reading	104
4.10 Exercises	105
 Chapter 5 Plasticity, yielding and ductility, and strength-limited applications	 113
5.1 Introduction and synopsis	114
5.2 Strength, ductility, plastic work, and hardness: definition and measurement	115
5.3 The big picture: charts for yield strength	121
5.4 The physical origins of strength and ductility	123
5.5 Manipulating strength	133
5.6 Introductory solid mechanics – plasticity and strength	143
5.7 Strength in design and manufacturing	151
5.8 Summary and conclusions	152
5.9 Further reading	153
5.10 Exercises	154
 Chapter 6 Fracture, fatigue, and fracture-limited applications	 165
6.1 Introduction and synopsis	166
6.2 Strength and toughness	167
6.3 The mechanics of fracture	169
6.4 Material property charts for toughness	179
6.5 The physical origins of toughness	181
6.6 Failure of ceramics	185
6.7 Manipulating properties: the strength–toughness trade-off	186
6.8 Fatigue	189
6.9 The physical origins of fatigue	197
6.10 Fracture and fatigue in design	199
6.11 Summary and conclusions	210
6.12 Further reading	211
6.13 Exercises	211
 Chapter 7 Materials and heat: thermal properties	 223
7.1 Introduction and synopsis	224
7.2 Thermal properties: definition and measurement	224
7.3 Material property charts: thermal properties	227

7.4	The physical origins of thermal properties	231
7.5	Design and manufacture: managing and using thermal properties	237
7.6	Summary and conclusions	246
7.7	Further reading	247
7.8	Exercises	247

Chapter 8 Materials at high temperatures: diffusion and creep **253**

8.1	Introduction and synopsis	254
8.2	The temperature dependence of material properties	254
8.3	Data for key reference temperatures	259
8.4	The science: diffusion	261
8.5	The science: creep	268
8.6	Materials and design to cope with creep	274
8.7	Summary and conclusions	277
8.8	Further reading	277
8.9	Exercises	277

Chapter 9 Surfaces: friction, wear, oxidation, corrosion **287**

9.1	Introduction and synopsis	288
9.2	Tribological properties	289
9.3	The physics of friction and wear	292
9.4	Friction in design	294
9.5	Chemical degradation: oxidation	296
9.6	Corrosion: acids, alkalis, water, and organic solvents	300
9.7	Fighting corrosion	304
9.8	Summary and conclusions	309
9.9	Further reading	310
9.10	Exercises	311

Chapter 10 Functional properties: electrical, magnetic, optical **317**

10.1	Introduction and synopsis	318
10.2	Electrical materials and properties	318
10.3	Drilling down: the origins of electrical properties	327
10.4	Design: using electrical properties	336
10.5	Electrical properties: summary and conclusions	339
10.6	Magnetic materials and properties	340
10.7	Drilling down: the origins of magnetic properties	347
10.8	Design: using magnetic properties	351
10.9	Magnetic properties: summary and conclusions	355
10.10	Optical materials and properties	356
10.11	Drilling down: the origins of optical properties	362
10.12	Design: using optical properties	368
10.13	Optical properties: summary and conclusions	369

10.14 Further reading	370
10.15 Exercises	371

Chapter 11 Manufacturing processes and microstructure evolution 383

11.1 Introduction and synopsis	385
11.2 Process selection in design	386
11.3 Processing for properties	390
11.4 Microstructure evolution in processing	392
11.5 Metal shaping processes	405
11.6 Heat treatment and alloying of metals	409
11.7 Joining, surface treatment, and additive manufacturing of metals	417
11.8 Powder and glass processing	420
11.9 Polymer and composite processing	421
11.10 Summary and conclusions	426
11.11 Further reading	427
11.12 Exercises	427

Chapter 12 Materials, environment, and sustainability 431

12.1 Introduction and synopsis	432
12.2 Material production, material consumption, and growth	432
12.3 Natural capital and the materials life cycle	436
12.4 Embodied energy and carbon footprint of materials	437
12.5 Materials and eco-design	446
12.6 Materials dependence	449
12.7 Materials and sustainable development	452
12.8 Summary and conclusions	454
12.9 Appendix: some useful quantities	455
12.10 Further reading	455
12.11 Exercises	456

Guided Learning Unit 1: Simple ideas of crystallography GL1-1

Introduction and synopsis	GL1-2
GL1.1 Crystal structures	GL1-2
GL1.2 Interstitial space	GL1-9
GL1.3 Describing planes	GL1-10
GL1.4 Describing directions	GL1-13
GL1.5 Ceramic crystals	GL1-14
GL1.6 Polymer crystals	GL1-19
Solutions to exercises (online)	

Guided Learning Unit 2: Material selection in design**GL2-1**

GL2.1	Introduction and synopsis	GL2-2
GL2.2	Screening and ranking: property limits and trade-offs	GL2-2
GL2.3	Material indices for stiffness-limited design	GL2-4
GL2.4	Case studies in stiffness-limited design	GL2-15
GL2.5	Material indices for strength-limited design	GL2-18
GL2.6	Case study in strength-limited design	GL2-24
GL2.7	Summary and conclusions	GL2-26
GL2.8	Further reading	GL2-26
GL2.9	Final exercises	GL2-27
Solutions to exercises (online)		

Guided Learning Unit 3: Process selection in design**GL3-1**

GL3.1	Introduction and synopsis	GL3-2
GL3.2	Selection of shaping processes: attributes for screening	GL3-2
GL3.3	Estimating cost for shaping processes	GL3-10
GL3.4	Case studies: selection of shaping processes	GL3-14
GL3.5	Selection of joining processes: attributes for screening	GL3-20
GL3.6	Selection of surface treatment processes: attributes for screening	GL3-23
GL3.7	Technical evaluation	GL3-24
GL3.8	Assessment of new processes: additive manufacturing	GL3-28
GL3.9	Summary and conclusions	GL3-30
GL3.10	Further reading	GL3-30
GL3.11	Final exercises	GL3-31
Solutions to exercises (online)		

Guided Learning Unit 4: Phase diagrams and phase transformations**GL4-1**

Introduction and synopsis		GL4-2
GL4.1	Key terminology	GL4-3
GL4.2	Simple phase diagrams, and how to read them	GL4-6
GL4.3	The iron-carbon diagram	GL4-17
GL4.4	Interpreting more complex phase diagrams	GL4-19
GL4.5	Phase transformations and microstructural evolution	GL4-23
GL4.6	Equilibrium solidification	GL4-25
GL4.7	Equilibrium solid-state phase changes	GL4-36
GL4.8	Non-equilibrium solid-state phase changes	GL4-41
GL4.9	Further reading	GL4-48
GL4.10	Further exercises	GL4-49
Solutions to exercises (online)		

Appendix A: Material property data
