

Contents

Preface	xiii
PART I: OVERVIEW	1
Chapter 1: Introduction	3
1.1 The concept of deployable structures	3
1.2 Motivation for research	6
1.3 Potential applications	9
1.4 Advantages	10
1.5 Types of deployable structures	11
1.6 Research centers for deployable structures	12
1.7 Layout of the book	17
Chapter 2: Earth-Based Deployable Structures	19
2.1 Classification	19
2.2 Deployable structures based on pantographs	20
2.3 Deployable structures based on 2-D panels	52
2.4 Cable and membrane deployable structures	63
2.5 Pneumatic deployable structures	69
2.6 Tensegrity deployable structures	78
2.7 Retractable roofs	82
2.8 Other architectural applications	89
Chapter 3: Deployable Structures for Space Applications	93
3.1 Early designs	93
3.2 The concept of adaptivity	105
3.3 Recent designs	109

PART II: SNAP-THROUGH TYPE DEPLOYABLE STRUCTURES 145

Chapter 4: Introductory Remarks 147

4.1 The concept of snap-through 147
4.2 Examples of bi-stable structures 148
4.3 Historical evolution 151
4.4 Structural behavior 153

Chapter 5: Geometric Design 157

5.1 The geometric design approach 157
5.2 Polygonal units for flat structures 158
 5.2.1 Geometric constraints 158
 5.2.2 Geometric design 161
 5.2.3 Discrete joint dimensions 161
5.3 Geometric constraints for flat unit assemblages 164
5.4 Polygonal units for curved structures 165
 5.4.1 Geometric constraints 168
 5.4.2 Geometric design 172
 5.4.3 Discrete joint dimensions 173
5.5 Geometric constraints for curved unit assemblages 176
 5.5.1 Polyhedra with polygons of one order i_1 180
 5.5.2 Polyhedra with polygons of two orders i_1 and i_2 181
 5.5.3 Polyhedra with polygons of three orders i_1 , i_2 , and i_3 181
5.6 Trapezoidal units for flat structures 183
 5.6.1 Geometric constraints 183
 5.6.2 Geometric design 186
 5.6.3 Discrete joint dimensions 188
5.7 Structures with arbitrary geometry 191
 5.7.1 Prismatic units 192
 5.7.1.1 Geometric constraints 193
 5.7.1.2 Geometric design 195
 5.7.2 Pyramidal units 198
 5.7.2.1 Geometric constraints 199
 5.7.2.2 Geometric design 202
5.8 Experimental verification 204
 5.8.1 Description of experimental program 204
 5.8.2 Small-scale models 204
 5.8.3 Medium-scale models 209
 5.8.4 Hub design 212
 5.8.5 Full-size model 214
 5.8.6 Testing 220

5.8.7 Suggestions for future experimental work	220
5.9 Concluding remarks on geometric design	222

Chapter 6: Structural Analysis **223**

6.1 Overview	223
6.2 Analysis in the deployed configuration	224
6.2.1 The finite element approach	225
6.2.2 Modeling of deployable flat slabs via equivalent continua	227
6.2.2.1 Substitution of SLEs by uniform beams	230
6.2.2.2 Substitution of equivalent grid by equivalent slab	237
6.2.2.3 Model verification and limitations	239
6.3 Analysis during deployment	241
6.3.1 Basic considerations for single units	242
6.3.2 Friction: main mechanism and proposed model	253
6.3.2.1 The proposed friction model	255
6.3.2.2 Exact model for pivotal connection between two bars	259
6.3.2.3 Exact model for hinged connections between bars and hubs	260
6.3.2.4 Approximate model for pivotal connection	261
6.3.2.5 Approximate model for hinged connection	262
6.3.2.6 Implementation of the proposed model	262
6.3.2.7 Verification of the proposed numerical model	264
6.3.3 Conclusions on finite element modeling for single deployable units	265
6.3.4 Deployment results for multi-unit structures	267
6.3.4.1 Proposed approximate model for multi-unit structures	269
6.3.5 Analytical prediction of snap-through intensity	272
6.3.5.1 Derivation of approximate models for flat units	274
6.3.5.2 Verification of approximate models for flat units	280
6.3.5.3 Derivation of approximate model for curved units	282
6.3.5.4 Verification of approximate models for curved units	288
6.3.5.5 Concluding remarks	290

Chapter 7: Design Methodology **293**

7.1 Introductory remarks	293
7.2 A general design methodology	295
7.3 A design methodology for flat structures	297
7.4 Optimization of material and cross-section properties	298

Chapter 8: Design Examples **305**

8.1 Presentation of case studies	305
8.2 Deployable flat slab	305

8.3 Deployable semi-circular arch	309
8.4 Airship cover	310
8.5 Temporary shelter	314
8.6 Deployable scaffolding	317
