<b>1 The unacceptable status quo: malnutrition challenges of the developed and developing world</b>	<b>1</b>
<i>Jaya Jumrani, Vikalp N. Rai</i>	
Charting the trends in malnutrition across the globe	1
Status of malnutrition in developed regions	5
Status of malnutrition in developing regions	8
Malnutrition challenges across South Asia	10
Trends in status of malnutrition among Indian population	13
Lessons learnt and way forward	16
Disclaimer	21
References	21
<b>2 Role of molecular approaches in improving genetic variability of micronutrients and their utilization in breeding programs</b>	<b>27</b>
<i>Mohd. Kamran Khan, Anamika Pandey, Mehmet Hamurcu, Erdogan Esref Hakki, Sait Gezgin</i>	
Importance of genetic variability of micronutrients	27
How did genetic variability become a concern?	28
Agronomic biofortification	28
Genetic biofortification	29
Status of genetic variability of micronutrients especially iron and zinc in wheat and barley	30
Genetic variability in wheat	32
Genetic variability in barley	34
Molecular advancement to increase the genetic variability of Zn and Fe content	34
Molecular mapping and association studies for genetic biofortification	38
Advancement in genome editing techniques and future perspective of future breeding programs	42
References	43
<b>3 Getting more micronutrients from wheat and barley through agronomic biofortification</b>	<b>53</b>
<i>Ashwin Dapkekar, Paresh Deshpande, Manoj D. Oak, Kishore M. Paknikar, Jyutika M. Rajwade</i>	
Introduction	53
Importance of micronutrients (zinc, iron, and selenium) in plants and animals	55

Causes of micronutrient deficiency	57
Ways and means of ameliorating micronutrient deficiencies	58
Translocation of micronutrients in wheat and barley and accumulation in grain	59
Metal utilization at the cellular level	60
Metal translocation in plants—roots to leaves to seeds	60
Techniques used to study metals movement in plants and plant parts	64
Biofortification	65
Genetic and transgenic biofortification in wheat and barley	65
Agronomic biofortification	67
Soil factors affecting biofortification	72
Biotic factors affecting biofortification	73
Advantages and disadvantages of agronomic biofortification	74
Impact assessment of biofortified crops	77
Quality characteristics	77
Bioavailability	78
Conclusions and prospects	81
References	82
<b>4 Anti-nutritional factors and bioavailability: approaches, challenges, and opportunities</b>	<b>101</b>
<i>Sewa Ram, Sneh Narwal, Om Prakash Gupta, Vanita Pandey, Gyanendra Pratap Singh</i>	
Introduction	102
Phytic acid and micronutrient bioavailability	103
Phytase levels and micronutrient bioavailability	104
Protease inhibitors	106
Classification and mechanism of action	107
Trypsin inhibitor (TIs) in wheat	108
Trypsin inhibitor in Barley	109
Anti-nutritional effect of protease inhibitors	109
Strategies to minimize the protease inhibitors activity	110
Tannins	111
Anti-nutritional effects of tannins	111
Tannin content in wheat and barley	112
Methods to reduce the anti-nutritional effect of tannins	112
Cyanogenic glycosides	114
Biosynthesis of cyanogenic glycosides	114
Molecular biology and metabolic engineering of CGs biosynthesis	116
Effect of processing on cyanogenic glycosides	116
Detection of CGs and quantification of cyanogenic glycosides	117
Nutritional effect	117
Cyanogenic glycosides in Barley	117
Alkaloids	118
Quantification methods for alkaloids	119

Alkaloids in barley	119
Biosynthesis and genetics of barley alkaloids	120
Alkaloids in wheat	120
Lectins in wheat and barley	121
Oxalate in wheat and barley	122
References	122
<b>5 A decade of progress on genetic enhancement of grain zinc and iron in CIMMYT wheat germplasm</b>	<b>129</b>
<i>Govindan Velu, Ravi P. Singh, Arun K. Joshi</i>	
Introduction	129
State-of-the-art breeding and phenotyping for micronutrients at CIMMYT	131
Germplasm screening and gene discovery	133
Germplasm deployment and variety release	134
Mainstreaming of grain zinc in CIMMYT wheat breeding	134
Conclusions	137
References	137
<b>6 Biofortification of wheat through wide hybridization and molecular breeding</b>	<b>139</b>
<i>Imran Sheikh, Pritesh Vyas, Harcharan Singh Dhaliwal</i>	
Introduction	139
Micronutrient malnutrition: a global health problem	142
Role of iron and zinc in plant and human metabolism	143
Causes of micronutrient deficiency in human being	144
How to alleviate micronutrient deficiency?	145
Agronomic biofortification	145
Genetic biofortification—most reliable approach	147
Genetic variation in micronutrient concentration of wheat grains	148
Strategies used for genetic biofortification	149
Radiation hybridization	149
Crop improvement through induced homeologous recombination	151
Crop improvement through genetic engineering approaches	152
Grain micronutrient concentration and bioavailability	153
Characterization of alien introgression through molecular markers	155
Characterization of alien introgression through advanced cytological techniques	155
Biofortification of wheat and related species	156
Genes involved in metal homeostasis and physiological processes from a biofortification perspective	157
Uptake mechanism of Fe and Zn in plants	157
Fe and Zn pathway through the plant body	158
Intracellular transport of Fe and Zn in plants	161
Iron binding proteome of bread wheat	162
Limitations and conclusion	162
References	167

<b>12 Barley grain beta glucan enrichment: status and opportunities</b>	<b>295</b>
<i>Dinesh Kumar, Sneh Narwal, Shalini Virani, Ramesh Pal Singh Verma, Sanjaya Gyawali, Gyanendra Pratap Singh</i>	
Introduction	295
Barley production and utilization	296
Nutritional benefits of barley	296
Cholesterol lowering properties of beta glucans	297
Regulation of blood glucose levels	297
Beta glucans of barley	298
Status of beta glucans content in barley grain and possible ways to increase the concentration	299
Genotype	299
Environment	302
Cultural practices	303
Opportunities for greater utilization of barley in food products	304
Conclusion	307
