

## LITERATURE REVIEW

The early work of spiders in Thailand was carried out by Europeans. During the period 1850 to 1900, public interest in natural history was at a peak and museums were being established throughout Europe to hold specimens collected from distant lands. There were many keen and remarkable arachnologists during this time, including O. Pickard-Cambridge, F. Karsch, G. Keyserling, C. L. Koch, T. Thorell, R. I. Pocock and E. Simon. Almost all emphasized in systematics which is the result of classifications. The most widely used classification at that time was that of Eugène Simon's "Histoire Naturelle des Araignées" (1892-1903). Simon was a classical morphologist and his key taxa were defined by the absence of characters and hence are mostly not monophyletic. He published the first ever record of spider from Thailand "Arachnides recueillis par M. A. Pavie (sous-chef du service des postes au Cambodge) dans le royaume de Siam, au Cambodge et en Cochinchine" and described several species and even genera in 1886. Following on from the time of Simon, several authors when describing new species from the tropics tended to attach new species to existing genera and families. However, these descriptions lacked drawings and contained no habitat information. There is little or no recent records on these species.

Another significant contribution to spiders of Thailand is "The Fauna of British India, including Ceylon and Burma", published by Pocock (1900) that included a few species occurring in our country. After the 1900s, there was a dull in the study of Thailand spiders for almost a century until the 1970s.

The 1970s and 1980s marked the era of renewed interest in spiders in many parts of the world, not only their taxonomy but also their biology, ecology, evolution, and physiology. The knowledge on the spider fauna of Thailand has been significantly increased by a number of other arachnologists. Foremost are the works of C. L. Deeleman-Reinhold, P. Lehtinen, A. F. Millidge, C. Okuma, P. J. Schwendinger and W. Vungsilabutr.

The list of Thai spider fauna below is intended to give all the species recorded from the country as far as possible. The listings include all descriptions of new species while mentions of taxa in purely faunistic works are omitted.

**LIPHISTIIDAE Thorell, 1869**

*Liphistius albipes* Schwendinger, 1995  
*Liphistius bicoloripes* Ono, 1988
