

# GENOTYPING OF PATHOGENIC BACTERIA:

## *STREPTOCOCCUS SUIS* AND *VIBRIO CHOLERA* MODELS

THIRD EDITION

POTJANEE SRIMANOTE

Molecular Immunology and Microbiology Unit  
Graduate Program in Biomedical Sciences  
Faculty of Allied Health Sciences  
Thammasat University

FOR ACADEMIC USE ONLY  
NOT FOR SALE

# CONTENTS

PREFACE TO THE SECOND EDITION	ix
LIST OF FIGURES	xi
LIST OF TABLES	xiii
<b>Chapter 1: INTRODUCTION TO MOLECULAR TYPING</b>	<b>1</b>
1.1 General information for bacterial typing methods	2
1.2 Bacterial phenotyping system	2
1.3 Bacterial genotyping system	5
1.3.1 Classification of genotyping system	6
1.4 Definitions of terms used in bacterial typing	8
1.5 Bacterial genotyping models in this textbook	11
<b>Chapter 2: CRITERIA FOR EVALUATION OF MICROBIAL TYPING SYSTEMS</b>	<b>15</b>
2.1 Characteristics of the useful genetic markers for typing	16
2.1.1 General characteristics of genetic markers	16
2.1.2 Features of genetic markers examined in bacterial strain typing	17
2.1.3 Characteristics of a useful genetic marker for bacterial typing	18
2.2 Criteria for evaluation of microbial typing systems	19
2.2.1 Criteria associated with performance of typing systems (efficacy)	20
2.2.2 Criteria associated with the convenience of typing systems (efficiency)	24
<b>Chapter 3: RESTRICTION FRAGMENT LENGTH POLYMORPHISM (RFLP)-BASED DNA FINGERPRINTING TECHNIQUE</b>	<b>27</b>
3.1 Plasmid DNA profile analysis	29
3.1.1 Introduction to plasmid DNA profile analysis and principle	29
3.1.2 Assessment of plasmid DNA profile analysis and its application	30
3.2 Typing by restriction fragment length polymorphism (RFLP) analysis of genomic DNA	32

3.2.1 General introduction on restriction endonuclease analysis (REA) of genomic DNA	32
3.2.2 Conventional REA of genomic DNA	35
3.2.3 RFLP analysis using a nucleic acid probe (ribotyping)	36
3.2.4 Pulsed-field gel electrophoresis (PFGE)	42
3.2.5 Comparison of DNA banding patterns and computer-assisted analysis	59
<b>Chapter 4: AMPLIFICATION-BASED DNA FINGERPRINTING TECHNIQUE</b>	<b>65</b>
4.1 General introduction	66
4.2 Random amplified polymorphic DNA (RAPD) PCR (RAPD-PCR)	66
4.2.1 Principle and procedure of RAPD-PCR	66
4.2.2 Assessment of RAPD-PCR	72
4.2.3 Interpretation of RAPD-PCR banding patterns	73
4.2.4 RAPD-PCR application in typing of pathogenic bacteria	74
4.3 Repetitive element sequence-based PCR (rep-PCR)	74
4.3.1 Introduction to REP-PCR, ERIC-PCR, and BOX-PCR	74
4.3.2 REP-PCR, ERIC-PCR, and BOX-PCR genomic fingerprinting procedure	76
4.3.3 Assessment of REP-PCR, ERIC-PCR, and BOX-PCR genomic fingerprinting and their application	76
4.4 Variable number of tandem repeats (VNTR) analysis and multilocus variable number of tandem repeat analysis (MLVA)	78
4.4.1 Introduction to VNTR analysis and MLVA	78
4.4.2 VNTR analysis and MLVA procedure	79
4.4.3 Assessment of VNTR analysis and MLVA typing	81
4.5 Amplified fragment length polymorphism technique (AFLP)	82
4.5.1 Introduction to AFLP	82
4.5.2 Assessment of AFLP for bacterial typing	83
<b>Chapter 5: DNA SEQUENCING BASED TYPING SYSTEM</b>	<b>89</b>
5.1 Introduction to DNA sequencing	90
5.2 Strategies in DNA sequencing	91

5.2.1 The Sanger method	93
5.2.2 Pyrosequencing	95
5.3 The workflow of next-generation sequencing data analysis	98
5.4 Bacterial strain typing by DNA sequencing-based methods	100
5.4.1 Single locus sequence typing (SLST)	101
5.4.2 Multilocus sequence typing (MLST)	103
5.4.3 Whole genome sequencing (WGS)	111
5.4.4 Epidemiologic concordance validation of WGS-based typing method	118
<b>Chapter 6 SELECTION OF APPROPRIATE TYPING METHOD FOR TYPING OF BACTERIAL STRAINS</b>	<b>123</b>
6.1 Introduction on the selection of the typing method	124
6.2 Purpose of epidemiology typing	125
6.2.1 Study of bacterial population genetics	125
6.2.2 Epidemiologic surveillance of infectious diseases	126
6.2.2 Outbreak investigation	127
6.2.4 Study of the pathogenesis of infection	129
<b>INDEX</b>	<b>131</b>
