Preface xxv

Part I
Genetics, molecular and cellular biology

1. Genetics of frontotemporal dementia

Ebru Erzurumluoglu Gokalp, Demet Ozbabalik Adapinar and Sevilhan Artan

List of abbreviations 3
Mini-dictionary of terms 3
Genetics of frontotemporal dementia 3
Epidemiology 4
Clinical syndromes of FTD 5
Behavioral variant frontotemporal dementia (bvFTD) 5
Semantic variant Primary Progressive Aphasia (svPPA) 5
Nonfluent/Agrammatic variant Primary Progressive Aphasia (nfvFTD) 5
Disturbances of motor function in frontotemporal degenerations 6
Neuropathological features of FTD 6
Genetics of frontotemporal dementia 6
Heritability 6
Microtubule-associated protein tau (*MAPT*; OMIM: 157140) 7
Chromosome 9 open reading frame 72 (*C9orf72*, OMIM: 614260) 8
Rare Mendelian genes related with FTD 10
Transmembrane protein 106b gene (*TMEM106B*; OMIM: 613413) 12
RAS-associated protein (*RAB38*; OMIM: 606281) and cathepsin C (*CTSC*: OMIM: 602365) 12
Role of epigenetics in FTD 12
Conclusion 13
Applications to other areas of aging 13
Key facts of FTD genetics 13
Summary points 14
References 14

2. Aging, brain-derived neurotrophic factor (BDNF) and its Val66Met polymorphism: a focus on neuropsychology, the visual system, and brain structures

Ting Shen, Yuyi You, Vivek K. Gupta and Stuart L. Graham

List of abbreviations 17
Mini-dictionary of terms 17
Brain-derived neurotrophic factors 18
BDNF polymorphisms 18
Val66Met polymorphism 18
Other BDNF polymorphisms 19
BDNF Val66Met polymorphism influences aging of neuropsychological functions 19
BDNF polymorphism and neurodegeneration in the visual system 20
Aging of brain structures and BDNF polymorphism 20
Applications to other areas of aging 21
Key facts of BDNF Val66Met polymorphism 21
Brain-derived neurotrophic factor demonstrates protective effects against oxidative stress 21
References 22

3. Aging, demented patients and polymorphisms in cytokine genes

Vanêssa Gomes Fraga, Paulo Caramelli and Karina Braga Gomes

List of abbreviations 27
Mini-dictionary of terms 27
Introduction 28
SNPs: Nomenclature, distribution, and implications 28

SNPs in cytokine genes: a driving force on normal and pathological aging 28
Tumor necrosis factor alpha (TNF-α) 29
Interleukin-1 beta (IL-1β) 30
Interleukin 10 (IL-10) 30
Interleukin 6 (IL-6) 31
Transforming growth factor beta 1 (TGF-β1) 31
Is dementia associated to a genetic susceptibility profile? 32
Applications to other areas of aging 32
Key facts about SNPs in cytokine genes 32
Summary points 32
References 33

4. RNA fragments and brain aging

Lingyu Guan and Andrey Grigoriev

List of abbreviations 37
Mini-dictionary of terms 37
Introduction 37
Transfer RNA and ribosomal RNA 38
RNA interference 40
Transfer and ribosomal RNA fragments 40
Biogenesis of small RNA and RNA fragments 40
Regulatory roles of RNA fragments, their role in disease 41
RNA fragments in aging 42
RNA fragments and nervous system 43
Conclusions 44
Applications to other areas of aging 45
Summary points 45
References 45

5. Centrosome functions and remodeling during neuronal development and centrosome abnormalities in neuronal disorders, disease, and in aging

Heide Schatten

List of abbreviations 49
Mini-dictionary of terms 49
Introduction 49
Structure and functions of centrosomes in mammalian somatic cells 50
The role of centrosomes in neuronal development 52
Centrosome dysfunctions in neuronal diseases/disorders 53
Centrosomes in neuronal cells of the aging brain 53
Applications to other areas of aging 54
Key facts 55
Summary points 55
References 55

6. Brain aging and microarray analysis

Cristina Sanfilippo and Michelino Di Rosa

List of abbreviations 59
Mini-dictionary of terms 59
Introduction 60
A little history on microarray technology 60
The brain aging 60
Microarray methods considerations 62
Synopsis 62
How DNA microarray works 63
Samples preservation 63
Data analysis 63
The opportunity of data merging 65
The application of deconvolution method in brain biopsies transcriptome 65
Alzheimer disease and microarray analysis 66
Applications to other areas of aging 68
Example of key facts 68
Summary points 68
References 68

7. Human nuclear tau and aging

Concetta Federico, Francesca Bruno, Valentina Sturiale, Agata Grazia D'Amico, Grazia Maugeri, Velia D'Agata, Laura Gil and Salvatore Saccone

List of abbreviations 71
Mini-dictionary of terms 71
Introduction 72
The *MAPT* gene 72
Genomic structure and expression 72
Pathological mutations 72
Tau protein 74
Tau organization and functional domains 74
Post-translational modifications: phosphorylation 74
Nuclear location of the tau protein 74
The functional role of nucleolar tau 76
Tau protein and cell aging 76
Nuclear tau and neurodegeneration 76
Nuclear tau in replicative and differentiated cells during aging 76
Nuclear tau and aging pathology 78
Applications to other areas of aging 78
Key facts of neurodegeneration 79
Summary points 79
References 79

8. Lipoxidation: features, neurological tissues, and aging

Reinald Pamplona, Mariona Jové, Irene Pradas, Natalia Mota-Martorell and Isidro Ferrer

List of abbreviations 83
Mini-dictionary of terms 84
Introduction 84
Lipid composition of human brain 84
Lipids in human brain from a cross-regional approach 86
Lipid oxidation and lipoxidation-derived molecular damage 86
Cross-regional differences in vulnerability to lipoxidative damage 87
Lipids and brain aging 88
Cross-regional differences in lipoxidative damage during human brain aging 89
Selective protein lipoxidation in human brain and during brain aging 89
Interventions against brain aging 89
Applications to other areas of aging 93
Key facts of lipids and brain 93
Summary points 94
References 94

9. Aging modifies concentration and metabolism of amino acids and associated receptor functionality in the brain

Mitsuhiro Furuse

List of abbreviations 97
Mini-dictionary of terms 97
Introduction 98
Differential changes in amino acid concentrations among some brain regions with aging 99
Excitatory amino acids (EAAs) 99
NMDA receptors 100
AMPA receptors 100
Kainate receptors 101
L-Tyrosine 101
L-Tryptophan 102
Branched chain amino acids 102
L-Arginine 103
D-Amino acids 103
Gut microbiota and brain amino acids with aging 104
Perspectives 104
Applications to other areas of aging 105
Key facts of amino acids 106
Summary points 106
Acknowledgment 106
References 106

10. How 3′,5′-cyclic nucleotide phosphodiesterases change in the brain with normal aging and dementia

Michy P. Kelly

List of abbreviations 109
Mini-dictionary of terms 109
Introduction 109
Changes in PDE expression or activity with normal aging 110
Changes in PDE subcellular compartmentalization with normal aging 112
PDE inhibitors show promising anti-aging effects preclinically and clinically 112
Changes in PDE expression and activity have been associated with mild cognitive impairment (MCI), Alzheimer Disease (AD), and other dementias 113
Application to other areas of aging 114
Key facts about PDEs 114
Summary points 114
Acknowledgments 115
References 115

11. The prohibitin complex in aging and neurodegeneration

Andrea González-Morales, Mercedes Lachén-Montes, Karina Ausin, Paz Cartas-Cejudo, Naroa Mendizuri, Joaquín Fernández-Irigoyen and Enrique Santamaría

List of abbreviations 119
Mini-dictionary of terms 119
Introduction 120
Prohibitins in aging 121
Prohibitins in neurodegeneration 122
Olfactory deficits in aging and neurodegeneration 123
Deregulation of the olfactory prohibitin complex in neurodegenerative diseases 123
Applications in other areas of aging 125
Key factors of olfactory proteomics 126
Summary points 126
References 126

12. Synaptic ATPases and energy metabolism in the nervous system: roles and changes during aging

Roberto Federico Villa and Federica Ferrari

List of abbreviations 129
Mini-dictionary of terms 129
Introduction: studying bioenergetics 130

Functional proteomics of mitochondrial enzyme system during aging 130
Functional proteomics of SPM enzyme systems 131
SPM distribution 131
Age-induced changes on synaptic ATPases 132
Aging effects on ATPases of SPM and sensitivity for drugs: perspectives for treatments of neurodegenerative diseases 134
Background 134
Changes induced by aging 135
Applications to other areas of aging 136
Key facts of energy metabolism 137
Summary points 137
Acknowledgment 138
References 138

Part II
Neurological and imaging features

13. Microstructural imaging of the human brain with normal and "abnormal" aging using diffusion magnetic resonance imaging

Yu-Chien Wu

List of abbreviations 143
Mini-dictionary of terms 143
Introduction 144
Epidemiology of Alzheimer's disease 144
Normal aging 145
Cognitively normal aging versus amnestic mild cognitive impairment (MCI) and AD 145
Diagnosis of AD in the early stage 145
The role of microstructure imaging in the early detection of AD 146
Axonal density and inflammation-associated cellularity 147
Hybrid diffusion imaging (HYDI) 149
Applications to other areas of aging 149
Key facts of magnetic resonance imaging 150
Summary points 150
References 150

14. Imaging the brain and its vasculature in aging: applications of optical coherence tomography angiography

Ruikang K. Wang and Yuandong Li

List of abbreviations 153
Mini-dictionary of terms 153
Principle of OCT/OCTA 154
Complex-signal-based OCTA: OMAG 155
Using OMAG to evaluate the anatomy of blood supply 156
Doppler OCTA and Doppler OMAG (DOMAG) 157
Using DOMAG to measure cerebral blood flow (CBF) 157
OCTA capillary velocimetry 158
Evaluating cerebral capillary flow parameters in aging 159
Summary 160
Applications to other areas of aging 160
Summary points 161
References 161

15. Potential involvement of peri-neuronal nets in brain aging: an anatomical point of view

Jun Yamada and Shozo Jinno

List of abbreviations 163
Mini-dictionary of terms 163
Introduction 164
Age-related changes in PNNs 165
PNNs and neuronal protection 166
PNNs and synaptic plasticity 167
PNNs and cognitive function 168
Concluding remarks 169
Applications to other areas of aging 169
Key facts of PNNs 169
Key facts of the anatomy of the hippocampus 170
Summary points 170
References 170

16. Grey-matter networks in aging

Marisa Koini

List of abbreviations 173
Mini-dictionary of terms 173
Introduction 173
Gray matter covariance networks 174
Analysis methods 175
Gray matter networks and aging 175
Gray matter networks and sex 176
Gray matter networks and cognition 176
Gray matter networks and disease 180
Caveats and outlook 181
Application to other areas of aging 181
Key facts 182
Summary points 182
References 182

17. Changes in brain synapse–related molecules with age

Kiyohito Mizutani and Yoshimi Takai

List of abbreviations 185
Introduction 185
Anatomy and physiology of the hippocampal formation 186
Mechanisms of synapse formation 187
Different neuronal vulnerability between the CA1 and CA3 regions 188
Changes in expression levels of synaptic CAMs and their binding proteins with development and age 189
Nectins 189
Afadin 190
N-Cadherin 191
αN-Catenin 191
ZO-1 192
Nectin-like molecules (Necls)/cell adhesion molecules (CADMs) 192
Other synaptic CAMs 193
Changes in expression levels of other synapse-related molecules with development and age 193
Conclusions and perspectives 193
Summary points 193
Acknowledgments 193
References 194

18. Macroautophagy and chaperone-mediated autophagy in aging

Tando Maduna, Andre du Toit and Ben Loos

List of abbreviations 199
Mini-dictionary of terms 199
Introduction 200
The process of macro- and chaperone-mediated autophagy 200
Autophagic flux and precision monitoring of autophagy 201
Macroautophagy is a key regulatory link between aging and neurodegeneration 203
CMA and its role in aging and cognition 205
On the repurposing of drugs for autophagy targeting and antiaging research 205
Applications to other areas of aging 207
Key facts of autophagy 208
Summary points 209
References 209

19. Neuronal L-type calcium channels in aging

Joanne Koh, Sheeja Navakkode, Jing Zhai and Tuck Wah Soong

List of abbreviations 213
Mini-dictionary of terms 214
Introduction 214
Ca^{2+} signaling and the L-type calcium channel 214
$Ca_V1.2$ and $Ca_V1.3$ 216
Ca^{2+}dysregulation and synaptic plasticity in aging 219
Alzheimer disease (AD) 220
Parkinson disease 221
Applications to other areas of aging 221
Key facts of neuronal L-type calcium channels (LTCCs) 222
Summary points 222
References 222

20. The impact of aged microglia on D-serine-regulated glutamatergic transmission

Sebastián Beltrán-Castillo, Rommy von Bernhardi and Jaime Eugenin

List of abbreviations 227
Mini-dictionary of terms 227
Introduction 228
D-serine brain metabolism, function, and contribution to glutamatergic transmission 228
Differential roles for D-serine and glycine 229
Brain D-serine levels and the expression of serine racemase in aging 230
Impact of aging in the regulation of D-serine mediated by microglia 230
Summary 232
Applications to other areas of aging 232
Key facts 233
Astrocytes 233
Summary points 233
References 234

21. Ion channels and the aging brain

Federico Sesti and Alessandro Bortolami

List of abbreviations 237
Mini-dictionary of terms 237
Introduction 238
The aging brain undergoes cognitive impairment 238
Voltage-gated calcium channels impair calcium handling in aging hippocampal neurons 238
Oxidation of ryanodine receptors causes LTP impairment in aging neurons 239
Oxidation of inositol receptors leads to sensitization of calcium release 239
Oxidation of a K^+ channel causes sensory decline in aging *Caenorhabditis elegans* 240
ROS functionally modify voltage-gated K^+ channel KCNB1 through both direct and indirect mechanisms 240
Oxidation of KCNB1 channels causes hyperexcitability, inflammation, and neuronal loss in animal models of neurological disease 240
Dasatinib ameliorates KCNB1-mediated neurotoxicity 241
The mechanisms by which Ca^{2+} and K^+ channels confer aging-susceptibility are conserved in excitable tissue 242
Applications to other areas of aging 242
Key facts of Alzheimer disease 242
Key facts of dasatinib 243
Summary points 243
Acknowledgment 243
References 243

22. Dendritic spine remodeling and aging

Benjamin D. Boros and Jeremy H. Herskowitz

List of abbreviations 247
Mini-dictionary of terms 247
Introduction 247
Dendritic spine neurobiology 248
Remodeling of dendritic spines 248
Structural remodeling of spines in the aging brain 249
Neocortex 249
Hippocampus 250
Age-related memory loss 252
Spine-minded therapeutics in a complex, aging brain 253
Concluding remarks 253
Applications to other areas of aging 253
Spine remodeling in age-related neuropathology 253
Key facts about dendritic spines 254
Summary 255
References 255

23. High-density lipoprotein-cholesterol and neuroaging: memory and gyrification of the insular and frontal opercular cortex

Ryuta Kinno and Kenjiro Ono

List of abbreviations 259
Mini-dictionary of terms 259
Introduction 259
Vasoprotective functions of HDL related to AD 260
Positive effect of HDLC on cognitive and memory functions 260
Surface-based morphometry 261
Associations of HDLC and memory function in the elderly 261
Association between HDLC and gyrification of insular and frontal opercular cortex 261
Effects of insular and frontal opercular cortices on memory function 262
Conclusion 265
Applications to other areas of aging 265
Key facts of gyrification 265
Summary points 266
References 266

24. Astrocyte and microglial aging: morphology and modeling

Tiffany A. Peterson and Andrew G. MacLean

List of abbreviations 269
Mini-dictionary of terms 269
Introduction 269
Glia and eugeric aging 269
Astrocyte-specific activation in eugeric aging 270
Microglia-specific changes in eugeric aging 272
Biochemical basis of activation in eugeric aging 273

Inflammaging 273
Stress as a driver of inflammaging 273
Diseases driving inflammaging—chronic diseases 274
HIV 274
Flavivirus-induced inflammaging 275
Senescence 275
Alzheimer disease 275
Loss of connexin proteins 275
Loss of synapses 275
Applications to other areas of aging 276
Key facts in morphology associated with glial aging 276
Summary points 277
References 277

25. Cerebellum—aging of the neuronal machine

Pavel Filip and Martin Bareš

List of abbreviations 281
Mini-dictionary of terms 281
Introduction 281
Structure and function 281
Gross anatomy 281
Microscopical anatomy 282
Function 282
Cerebellar changes in aging 283
Structural changes 283
Functional changes 283
Histological changes 283
Biochemical and metabolic changes 284
Genetic and epigenetic changes 284
Cerebellar performance during aging 284
Current concepts and hypotheses for cerebellar aging 285
Possible methods of prevention of cerebellar damage and improvement of cerebellar function 286
Applications to other areas of aging 286
Key facts of cerebellum 286
Summary points 286
References 287

26. Lipids, beta-secretase 1, and Alzheimer disease

J. Villamil-Ortiz, B.J.L. Eggen and G.P. Cardona-Gómez

List of abbreviations 289
Mini-dictionary of terms 289
Introduction: the link between lipids and Alzheimer 290
Role of lipid rafts in AD 290
Sphingolipids and Alzheimer disease 292
Phospholipids and Alzheimer disease 293
Arachidonic acid, PLA, docosahexaenoic acid (DHA), and Alzheimer 293
Therapeutically targeting of BACE1 and lipid enzymes 294
Saturation balance of fatty acids plays a key role in the control of AD inflammation 295
Conclusion and perspectives 295
Applications to other areas of aging 296
Key facts 297
Summary points 297
References 297
Further reading 299

27. Aging, myelination, and the optic nerve

Ahmed Abdellatif and Hamdino Attia

List of abbreviations 301
Mini-dictionary of terms 301
Introduction 301
Applications to other areas of aging 301
Myelination in the nervous system 302
Regulation of myelination 303
Aging and oligodendrocytes 303
Changes in the optic nerves with age 305
Myelin changes in the optic nerve 305
Myelin ballooning 307
Redundant myelin 307
Changes in the paranodal profiles in the optic nerve 307
Changes in the internodes in the optic nerve 307
Cytoplasmic changes in the optic nerve axons 307
Key facts 307
Summary points 309
References 309

28. Linking proteostasis, aging, and brain ischemia

Wei Yang, Ran Li, Xuan Li and Dennis A. Turner

List of abbreviations 313
Mini-dictionary of terms 313

Introduction 313
The impact of aging in CA 314
The impact of aging in ischemic stroke 314
Effects of brain aging and ischemia on cellular homeostasis 314
Proteostasis-related pathways in aging and brain ischemia 314
UPR 315
Ubiquitination 317
SUMOylation 318
Autophagy 319
Clinical implications 320
Applications to other areas of aging 320
Key facts of brain ischemia 322
Summary points 322
References 322

29. Luteinizing hormone and the aging nervous system

Megan Mey and Gemma Casadesus

List of abbreviations 325
Mini-dictionary of terms 325
Introduction 326
Circulating luteinizing hormone relationship with cognitive decline and Alzheimer disease 327
Circulating luteinizing hormone suppression effects on cognition and Alzheimer disease 328
Relevance of CNS-derived luteinizing hormone on cognition and Alzheimer disease 329
Unifying hypotheses for the role of luteinizing hormone signaling in the aging CNS 330
Conclusions 332
Applications to other areas of aging 332
Key points on luteinizing hormone 333
Summary points 333
Acknowledgments 333
References 333

30. Insights into aging using transcranial magnetic stimulation

Jennifer I. Lissemore, Lauren Wengle, Zafiris J. Daskalakis and Daniel M. Blumberger

List of abbreviations 337
Mini-dictionary of terms 337
Introduction 337
The principles of TMS 338
TMS measures of cortical circuit functioning across the lifespan 339
GABA receptor-mediated cortical circuits 339
Glutamate receptor–mediated cortical circuits 341
Resting corticospinal excitability 343
Interhemispheric inhibition 343
Cholinergic cortical circuits 343
TMS measures of cortical plasticity across the lifespan 343
LTP- and LTD-like cortical plasticity 344
Extension to regions beyond the motor cortex with TMS-EEG 345
Applications to other areas of aging 346
Key facts of transcranial magnetic stimulation (TMS) 346
Summary points 346
References 346

31. Alpha rhythms: what they are and how they alter with aging

Maria G. Knyazeva

List of abbreviations 349
Mini-dictionary of terms 349
Introduction 350
Thalamic mechanisms of AR 350
Cortical mechanisms and basic functions of AR 350
AR from human EEG 351
AR structure with data-driven methods 351
Intrinsic AR structure in young adults 351
AR components and visual processing streams 352
The conventional view of AR aging 353
Aging of the intrinsic component structure of AR 353
Applications to other areas of aging 355
Key facts of alpha rhythm (AR) 356
Summary points 356
References 356
Further reading 359

32. Nicotine and its derivatives in healthy brain aging

Alireza Majdi and Saeed Sadigh-Eteghad

List of abbreviations 361
Mini-dictionary of terms 361

Introduction 362
The aging brain: Mechanisms and consequences 362
Nicotine: Kinetics, metabolism, and metabolites in the brain 363
Nicotine, its metabolites, and nAChRs in the brain 363
Procognitive effects of nicotine in neurodegeneration and aging 365
From bench to bedside: Clinical applications of nicotine 366
Cotinine: An emerging role player in the procognitive effects of nicotine 366
Nornicotine: A minor but pharmacologically active metabolite of nicotine in the brain 367
Conclusion and future directions 367
Applications to other areas of aging 367
Key facts of nicotine 367
Summary points 368
References 368

Part III
Physiological aspects

33. Environmental enrichment and physiological aging

Yulia K. Komleva, Vladimir V. Salmin, Olga L. Lopatina, Olga A. Belova and Alla B. Salmina

List of abbreviations 373
Mini-dictionary of terms 374
Introduction 374
Changes in neuroplasticity in the aging brain and effects of EE 375
Early changes in brain plasticity associated with exposure to EE: control of IEGs expression 375
Epigenetic changes associated with the expression of IEGs in aging and exposure to EE 376
Long-lasting changes in brain plasticity in aging and exposure to EE 377
Aging versus Alzheimer-type neurodegeneration: different effects of EE 378
Applications to other areas of aging 380
Summary points 380
Key facts 380
Acknowledgment 380
References 380

34. Treadmill exercise and neuroinflammation: Links with aging

Caroline Cristiano Real, Karina Henrique Binda and Anne Marlene Landau

List of abbreviations 385
Mini-dictionary of terms 386
Introduction 387
Lifestyle habits of modern society 387
Neuroinflammation and aging 388
The effects of exercise on the brain 388
Key facts of treadmill exercise, neuroinflammation, and aging 398
Summary points 400
References 400

35. Impact of aerobic exercise on brain structure in models of aging: hippocampus and beyond

Lars Stiernman Jonasson, Chelsea Stillman and Kirk I. Erickson

List of abbreviations 403
Mini-dictionary of terms 403
Introduction 404
Cellular and molecular processes 404
Brain-derived neurotrophic growth factor 404
Insulinlike growth factor-1 406
Vascular endothelial growth factor 406
Neurotransmitters 407
Effects on brain structure 407
Gray matter 407
Vascular system 409
White matter 409
Beyond the hippocampus 409
Applications to other areas of aging 410
Key facts of brain structure 411
Summary points 411
References 411

36. The effects of cardiorespiratory fitness on brain and cognitive aging

Daniel C. Bowie, Grace M. Clements, Gabriele Gratton and Monica Fabiani

List of abbreviations 415
Mini-dictionary of terms 415

Introduction 416
Exercise effects on growth factors in aging 416
Brain-derived neurotrophic factor 416
Vascular endothelial growth factor 417
The neuroendocrinology of exercise and stress 418
Arterial elasticity in aging 418
Arterial physiology 418
Effects of arteriosclerosis on the brain 419
Arteriosclerosis and fitness 419
Arterial elasticity in the brain 420
Fitness effects on the preservation of cognitive performance, brain tissue, and cognitive function 420
Cognitive function and exercise 421
Brain structure and exercise 421
Brain function and exercise 423
Discussion 423
Applications to other areas of aging 423
Key facts about arterial elasticity 423
Summary points 424
Acknowledgments 424
References 424

37. Aging, babble noise, and the processing of speech perception

Hanani Abdul Manan, Noorazrul Azmie Yahya and Ahmad Nazlim Yusoff

List of abbreviations 427
Mini-dictionary of terms 427
Introduction 428
Applications to other areas of aging 428
Cognitive aging 429
What is noise? 429
Speech processing in babble noise 429
Factors influencing speech perception in background noise of aging brain 430
Neuroimaging technique 432
Key facts 433
Summary points 434
References 435

38. The blood-brain barrier in aging

Luca Anna Bors and Franciska Erdő

List of abbreviations 439
Mini-dictionary of terms 440
Introduction 440
The structure and role of BBB 440
BBB in physiological aging 440
BBB in age-related pathologies 441
Cerebral ischemia/reperfusion injury—stroke 443
BBB protein dysfunction—Alzheimer disease and Parkinson disease 443
Inflammation—multiple sclerosis 443
How to preserve the integrity of BBB in aging? 445
Applications to other areas of aging 446
Key facts of blood-brain barrier aging 446
Summary points 446
References 447

Part IV
Behavior and psychopathological aspects

39. Linking aging, anticholinergic drugs use, and cognitive impairment

Mariangela Boccardi and Virginia Boccardi

List of abbreviation 453
Mini-dictionary of terms 453
Introduction 453
Anticholinergic drugs use: An aging challenge 454
Brain aging, cognition, and dementia 456
Anticholinergic drugs, cognition, and dementia 456
Anticholinergic medications, cognitive impairment, and dementia 457
Future directions and conclusions 459
Applications to other areas of aging 459
Key facts 459
Summary points 459
References 460

40. Cognitive frailty: definitions, components, and impact on disability and mortality

Francesco Panza, Maddalena La Montagna, Vincenzo Solfrizzi, Rodolfo Sardone, Vittorio Dibello, Antonello Bellomo, Antonio Greco, Antonio Daniele, Davide Seripa, Gianluigi Giannelli and Madia Lozupone

List of abbreviations 463
Mini-dictionary of terms 463
Introduction 464
Frailty phenotypes 464
Cognitive frailty: a new definition 465

Cognitive frailty models and the potential for reversibility 465
Cognitive frailty: screening and diagnostic aspects 466
Current epidemiology of cognitive frailty 466
Prevalence 466
Cognitive frailty and adverse health-related outcomes 466
Cognitive frailty and cognitive-related outcomes 467
Biomarkers and potential neurobiological mechanisms underlying cognitive frailty
Applications to other areas of aging 470
Discussion 472
Preventive strategies for cognitive frailty 472
Key facts of cognitive frailty 473
Summary points 473
References 474

41. Cognitive impairment (brain) and (et) dynapenia (D) "BED" in older persons: role of arterial tree

Marcello Maggio and Fulvio Lauretani

List of abbreviations 477
Introduction: the "motoric cognitive risk (MRC)" 477
Main text: the link between hypertension and white matter hyperintensity (WMH) 478
Hypertension and cognitive impairment 479
Risk factors for dementia 480
Minor neurological signs and frailty in older persons 480
Frailty and dementia 480
Falls as key element of the "brain-muscle loop" 481
Physical activity and dementia 481
Clinical evaluation of the "motoric cognitive risk (MCR) syndrome" 481
Applications to other areas of aging 482
Key facts of vascular system 483
Summary points 483
References 483

42. Disentangling the effects of aging and ovarian hormone loss on sleep: implications for health and disease

Gina Nicoll, Anne Almey and Nicole J. Gervais

List of abbreviations 485
Mini-dictionary of terms 485
Introduction 486
Overview of sleep 486
Menopause and associated ovarian hormone changes 487
Sleep is sensitive to menopause-associated hormone loss 488
Hormone deprivation, circadian rhythms, and homeostatic regulation of sleep 492
Sleep and healthy aging 493
Conclusion 493
Applications to other areas of aging 495
Key facts of sleep in aging women 495
Summary points 495
References 496

43. Role of DNA methylation in aging-related cognitive functioning

Anna Starnawska and Nicklas Heine Staunstrup

List of abbreviations 499
Mini-dictionary of terms 499
Introduction 500
Importance of studying dementia and related phenotypes 500
DNA methylation as biomarker of disease 500
Regulation of DNA methylation in cognitive functioning 501
DNA methylation signatures of cognitive functioning 502
Epigenetic clock and cognitive functioning 503
Challenges and limitations of epigenetic studies of cognition 503
Summary 504
Applications to other areas of aging 504
Key facts of DNA methylation in aging 505
Summary points 506
References 506

44. Depression in the elderly and psychobiotics

Elnaz Vaghef-Mehrabany, Mehrangiz Ebrahimi-Mameghani, Mahzad Sanayei and Leila Vaghef-Mehrabany

List of abbreviations 509
Mini-dictionary of terms 509
Introduction 510
Geriatric depression 510
Risk factors and pathophysiology 510
Diagnosis and screening 511
Current treatments 512
Gut microbiota dysbiosis and endotoxemia 512
Psychobiotics 513
Probiotics 513
Prebiotics 514
Psychobiotics in depression 515
Application of psychobiotics in the geriatric MDD 516
Studies in the elderly 516
Conclusion and limitations of the studies 517
Applications to other areas of aging 517
Key facts of psychobiotics 517
Summary points 517
References 518

Part V
Diet and nutrition

45. Aging, dietary patterns, and cognition

Angela Marie Abbatecola and Raffaele Marfella

List of abbreviations 523
Mini-dictionary of terms 523
Introduction 523
Single nutritional supplementation on cognitive decline over aging 524
Vitamins 524
Omega-3 fatty acids 526
Potential use of multinutrient supplementation 527
Dietary patterns on cognitive decline over aging 527
MIND diet 530
Keto diet 530
Conclusions 531
Application to other areas of aging 531
Key facts 531
Summary points 531
References 531
Further reading 533

46. Geriatric nutritional risk index: applications and limitations

Mahzad Sanayei, Elnaz Vaghef-Mehrabany and Leila Vaghef-Mehrabany

List of abbreviations 535
Mini-dictionary of terms 535
Introduction 536
Geriatric nutritional risk index (GNRI) 536
Reliability and validity 538
Limitations 538
Applications to other areas of aging 541
Key facts of GNRI 542
Summary points 542
References 542

47. Diet, inflammation, and neurocognitive aging

Yian Gu

List of abbreviations 545
Mini-dictionary of terms 545
Introduction 546
Inflammation in LOAD 546
Neuroinflammation 546
Systemic inflammation 547
Diet in relation to LOAD and brain aging 547
Diet in relation to LOAD 547
Diet and neuroimaging markers 547
Diet and inflammation 548
Mediation role of inflammation in the association between diet and LOAD 548
Research gaps and future direction 548
Applications to other areas of aging 549
Key facts 549
Summary points 549
References 549

48. The dietary approaches to stop hypertension (DASH) and Mediterranean-DASH intervention for neurodegenerative delay (MIND) diets and brain aging

Samantha L. Gardener and Stephanie R. Rainey-Smith

Mini-dictionary of terms 553
Introduction 553
Dietary pattern background 554

DASH diet and cognitive function 554
MIND diet and cognitive function 555
Potential mechanisms of action 559
Modulation of CVD risk and indices of diabetes 559
Telomere length 560
Antioxidant and anti-inflammatory properties 560
Conclusion 561
Applications to other areas of aging 561
Key facts of the Dietary Approaches to Stop Hypertension (DASH) and Mediterranean-DASH Intervention for Neurodegenerative Delay (MIND) diets and brain aging 562
Summary points 562
References 562

49. The ketogenic diet and healthy brain aging

Georgia A.F. Rogerson and Victor R. Preedy

List of abbreviations 567
Mini-dictionary of terms 567
Introduction 567
Fueling the brain 568
Ketogenesis and ketolysis 568
Dietary patterns and neurodegenerative disease 570
Experimental ketotherapeutics and neurodegenerative disease: mouse models 571
Medium-chain triglyceride (MCT) administration 572
Dietary intervention 572
Practical aspects 572
Applications to other areas of aging 572
Key facts of aging and ketone bodies 573
Summary points 573
References 573

50. Autophagy and aging: diet, exercise, and the link with the target of rapamycin complex 1 (TORC)

Kurt A. Escobar and Trisha A. VanDusseldorp

List of abbreviation 577
Mini-dictionary of terms 577
Introduction 578
An unkept house: autophagy and aging 578
Cellular housekeeping 578
Autophagy prevents the aging phenotype 579
Recycling neuropathology 579
Activating life's recycling system 580
Ancient signaling 580
Finding good housekeeping 581
Restrict calories extend longevity 582
Fasting to slow the aging process 583
Cleaning up a cluttered mind 583
Live, laugh, longevity nutrients 584
Resveratrol and pterostilbene 584
Curcumin 584
EGCG (from green tea extract) 584
Applications to other areas of aging 585
Key facts of autophagy 585
Key facts of caloric restriction 585
Key facts of the evolutionary underpinnings of human neurobiology of calorie restriction 586
Summary points 586
References 586

51. Dietary flavonoids and brain health in aging: food for thought

Catarina Rendeiro and Justin S. Rhodes

List of abbreviations 589
Mini-dictionary of terms 589
Introduction 590
Can flavonoids reach the brain? 590
Are dietary flavonoids protective in aging? Glimpse into the epidemiological evidence 591
Impact of dietary flavonoids on cognition in humans 592
Mechanisms of action of flavonoids in the aging brain 592
Synaptic plasticity and neuronal communication 593
Cerebral vasculature 594
Applications to other areas of aging: flavonoids and cardiovascular health 596
Key facts of flavonoids 596
Summary points 597
References 598

52. Antioxidant effects of curcumin and neuroaging

Shameemah Abrahams, Katelyn Cuttler, Minke Bekker, Jonathan Carr, Soraya Bardien and Okobi Ekpo

List of abbreviations 603
Mini-dictionary of terms 604
Introduction 604
Curcumin in oxidative and nitrosative stress-related aging in the brain: molecular-level effects 605

Curcumin promotes antioxidant expression and prevents inflammation 605
Curcumin in cellular senescence 606
Curcumin in fat and protein oxidation 607
Curcumin and JNK-induced apoptosis 607
Curcumin and DNA damage 607
Curcumin and mitochondrial dysfunction 607
The effect of curcumin on mild cognitive impairments: evidence from behavioral and neuroimaging studies 607
Effects of curcumin on cognitive performance 608
Effects of curcumin in the hippocampus and frontal lobe 608
Dietary curcumin and its effect on mild cognitive impairments and dementia: evidence from clinical trials 608
Curcumin bioavailability 608
Effects of dietary curcumin on mild cognitive impairments and dementia 611
Applications to other areas of aging or aging-related disorders 611
Key facts of curcumin 614
Summary points 614
Acknowledgments 614
References 614

53. **Lipoic acid and vitamin D3 and their use in preventing brain aging**

Francesca Uberti, Sara Ruga, Vera Morsanuto, Mahitab Farghali and Claudio Molinari

List of abbreviations 617
Mini-dictionary of terms 617
Introduction 618
Lipoic acid as a multifactorial nutrient 618
Lipoic acid in supplement formulation 619
Vitamin D3 as an aging marker 619
Vitamin D3 in the formulation of food supplements 620
New formulation that combines lipoic acid and vitamin D3 to improve cognitive function 621
Conclusion 623
Applications to other areas of aging 623
Key facts of aging process 624
Summary points 624
References 624

54. **Effects of β–hydroxy-β-methylbutyrate (HMB) supplementation on biomarkers for cognitive function and electrophysiological processes in aging**

Amogh Belagodu, Shuo Kang, Joshua M. Gulley and Roberto Galvez

List of abbreviations 627
Mini-dictionary of terms 627
Introduction 627
HMB effects on cognition 628
Potential mechanism for HMB's procognitive effects 628
Subjects and dietary supplements 629
Western blot 629
Electrophysiology 629
Effects of HMB supplementation 630
Summary of HMB's effects 631
Possible mechanism for HMB's cognitive benefits 632
Applications to other areas of aging 633
Key facts 633
Key facts of β-hydroxy-β-methylbutyric acid 633
Summary points 634
References 634

55. **Hydration, the brain, and aging**

Agata Białecka-Dębek

List of abbreviations 637
Mini-dictionary of terms 637
Introduction 638
Applications to other areas of aging 638
Regulation of fluid balance and aging 638
Dehydration and cognition function 640
Dehydration and cognitive function in the elderly 641
The role of dehydration in brain health and function 642
Key facts 643
Key facts of dehydration 643
Summary points 643
References 644

Index 647
